From: smeier@uspto.gov
Message-ID: <3o4u7p$e5g@pioneer.uspto.gov>
Source record: 257466

I saw an ad in Monitoring Times for a "Startek" brand frequency counter.
This counter has 'auto trigger and hold' functions and and sells for $150.
Can anyone compare this to the "Optoelectronics" brand counters that sell
for $400. Is the Opto a better counter?

Thanks
Stephen

Well, that depends on what type of encryption you have. SOme of the new
phones (Escort) have a pretty decent encryption and Digital Spread
Spectrum, enough to keep almost everyone except the NSA off you back.
As for online security check out PGP. It uses MD5 and IDEA encryption
algorythms. It's so good the Govt has tried to block it's export and jail
the author. About as secure as you're going to get and much more secure
than the weakest link---the Human.

University of Texas has property in N. Austin and I noticed one particular building with high security has about 5 discones on it. they each have a red rotating light and one of them was flashing.

Are these types of antennas used for receiving only? What are they the best for receiving?.. UHF Air?

They also have what appears to be a large HF antenna it's many wires in the form of a teepee but also has wires that run around the circumference about mid way up.

In article <3nv1ba$ehh@ixnews3.ix.netcom.com>, accroya@ix.netcom.com (James White) writes...
>Somewhere in the 450-480 range, there is a signal every day that really
>irritates me. It is a voice (or voices) accompanied by a loud squeal.
>The thing that bothers me is that it is EVERYWHERE. That entire range

Sounds like a pager. It takes quite a bit of RF activity to activate those little boxes on everyone's belt deep inside of buildings, so the pager transmitters use pretty high powers. Scanners, being wide-band receivers, can't really do much to filter out junk like this, so it gets into the radio, mixes in various ways, and you hear it everywhere.

This is where radio ceases to be neat and precise and starts to be a real analog art... If you can figure out the pager's exact frequency you can try to filter it out. Scan around the range you can hear it, and a little above and below. It should sound distorted everywhere but on it's real output frequency.

Filtering it is another problem altogether... on a portable scanner you don't really want to have external junk hanging off of the radio - too inconvenient. On a base scanner, you can get away with it. One simple method is to put a T in the feedline and hang a length of open-ended coax from the T. The coax has to be 1/4 wavelength long at the frequency you want to cut - something like 9" at 450 MHz. Start with a piece 10-12 inches long and snip a 1/4" at a time until the pager is reduced to a minimum. The notch isn't particularly sharp, so a few MHz +/- from the pager frequency will suffer too, but them's the breaks...

========== ^^^^^^ length in FEET

>quater wave, devide the answer by 2. A quater wave for 2 meters (146MHz)
>is approx 19 inches.

Thus 468/146=3.2 feet; one half that is 1.6 feet

1.6 feet x 12 inches/foot = 19.2 inches

I just thought that someone might be confused if we didn't make sure
they knew the formula calculated length in feet.

I got a Diamond RH77CA 8-bander rubber duckie. It can be used
to transmit on 2m and 440mhz, the 8 bands are:

120/150/2m/300/70cm/450/800/900Mhz. It's a thin duck, about 14"
long, with BNC connector. I like it. A lot better than the
carrot that comes with the AOR AR8000.

Mike

Try setting your scanner to search in the range 46.6 to 47 MHZ for the base of the cordless phone and 49.6 to 50 MHZ for the handset. The 46.6 to 47 MHZ part should be the only one you need to search because you will hear both sides of the conversation wheras on the 49 MHZ part you would only hear half. The base's signal is also stronger. In theory it is illeagal to listen to these calls, so this is just theoretical.(Of course) There is also a slight offset in the frequencies of the base and handheld (several KHZ, I forget how many), so if you hear a base on 46.67, the handset isn't necessarily on 49.67. There are also other cordless freq's that are in the higher ranges. Try looking in Radio Shack's POLICE CALL book in the back under the CONSOLIDATED FREQUENCY LIST. There you will find the other freq's.

>
Charlie:

I think that the Pro-46 is one of the BEST! It has a large display, is VERY well built, and a trained chimp can modify the thing for
cellular capability. The only cons are that 1) the feel of the slightly smaller scanners is nicer, but they don't have the display of
the '46. and 2) There is no "hyperscan" capability.

Unless you need more than 100 memories, this thing is definitely worth considering. I think it's even on sale at this time.

I read something about battery warnings in another msg. Mine does not have that problem, and I know at least two others who
have one and they don't have the problem either. They swear by theirs as well.

B. KEITH PARKER writes:

>Anyone know a mod or way to get military aircraft on
>a Pro-51?

>thanks,

>Keith

Unfortunately, not that I'm aware of. Just about the only coverage mods that scanners are capable of is restoring cellular coverage and the 66-88Mhz band. The cellular thing is possible because the coverage is already there; it's just that someone then went back and blocked reception out (and in the process made it really easy to reverse on most radios. How nice.) The 66-88 Mhz band is used in Europe, so I'm guessing that the manufacturers of certain scanners make a uniform scanner and then just mess with the particular settings depending on where it's going to be sold.

I could be unaware of some new modification that'll let you hear anything you want, but I imagine it would have already been posted all over. It is possible to tweak coverage on various bands to pick up a little extra reception (e.g. certain Radio Shack scanners going down to 380 Mhz). However, this just doesn't cut it for full reception.

If anyone can expand on this, go for it. That's about all I know.

H>area. Mighty nice that you can eat this cost yourself ! <g)

The only copy of Scantrix I've ever seen was a computer program. It was full of inaccuracies. David's Scantrix is a compilation of frequencies from many scanner guides already out there. It's a 'quantity not quality' listing. If he took some time and editted out obvious mistakes (such as listing Barrie polices repeater input as a simplex freq. or listing Barrie fire on 153.980 twice) the list would be much better. David seems to be incorporating all the lists he can into his program without checking them. About 14 years ago I submitted a list to Haruteq for inclusion in their book. I included a bogus frequency so I could identify how far my list travelled. Haruteq printed it up until their last (10th anniversary?) book. Seems they've gone through the ISC microfiche and spent some time updating and correcting their book. Guess where else my frequency appeared? That's right, Scantrix. Since this particular bogus freq. was only submitted to Haruteq, David must be copying Haruteq's book. The bogus freq does not fall on a ISC approved frequency. If David had looked hard enough he would have realized that.

I have come to the conclusion that I am the only person alive that has heard of or OWNS a Uniden Bearcat 210xlt!!! I posted a message a few days back, and also have checked the various FTP sites for mods, etc, but I can find nothing on this particular scanner. I'm kind of shocked that this isn't a popular model (ignorance perhaps?) since it was purchased at Lechmere, a chain of home/electronic stores. At this point I can imagine finding any mods/enhancements is out of the question, but I am hoping that maybe, just maybe someone out there has some insight on this and can tell me why this model is so hard to find info on. Were there only a limited amount made because of demand, or is the model just lousy? I see plenty of 200's and 205's out there, so logic tells me the 210 would be a step up?!? Any responses are appreciated!!!!!!

Thanks ahead of time...

In regards to a good rubber duck antenna, I have heard that the ANLI RD-78, sold by Tucker Electronics (800)-527-4642 is a good one. It covers VHF low-band well, which isn't always the case with a rubber duck. It sells for around $24.00.

The PRO-43 duckie is deaf on VHF-lo and worse than average on 800. Since
the PRO-43 is a relatively sensitive receiver it's not too noticeable.

The PRO-34 duckie (a.k.a. the GRE All Band) is no superstar on any one
band, but no dog either (with the possible exception of 220).

The BNC connector loosened up on my AOR 8000, (mostly likely due to a little rougher treatment then it was designed for...), and I sent it back for repair. I also asked for an idea to keep the keypad ink from wearing off, as it was disappearing from the ent key, and getting faint on some others.

They replaced the keypad with "...the new version." So, if you've got the "older" version, you might want to give a call and see about getting it replaced. I was using a piece of plastic taped over the keypad when I had it out of the case, and needless to say, it was a bit emabarrassing when other people would ask about it. After all the radio ain't cheap!

I recommend you join a scanner club which publishes a newsletter.

From the Introduction to Scanning FAQ, here's the scoop on two great clubs with very interesting newsletters. The frequency info in these newsletters is more detailed than what you'll find in Monitoring Times, USSN, etc. The equipment reviews vary in their depth, but are almost always honest and practical.

I've been a member of both clubs for years.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are $24.00 per year, which includes the monthly RCMA Journal, which consists of approximately 95 pages. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

AOSC questions can also be sent electronically to:

rccons!aosc_hq@telerama.pgh.pa.us or
dave.marshall@f240.n108.z1.fidonet.org.
FidoNet: 1:108/240.0

AOSC also has a MEMBERS & EDITORS Scanner related echo,
AOSCNet, distributed via FTN on 6 BBS systems, and via
Internet Mailing list. For info on the ECHO only, contact:

R.E. Christian, AOSC PA/AOSCNet Founder
PO BOX 12763,
Pittsburgh PA 15241-0763.
FAX: 412-831-5860.

Internet: rccons!aosc_pa@telerama.pgh.pa.us
rccons!aoscnet_hq@telerama.pgh.pa.us
rick.christian@f220.n129.z1.fidonet.org
FidoNet: 1:129/220.0

To receive a file of info on the All Ohio Scanner Club via
Internet send to: rccons!ftpmail@telerama.pgh.pa.us

In body: get aoscinfo.zip

This will send a UUENCODED info packet to you. The file
contains an outline of the material you will find in the
American Scannergram, the AOSCNet, and an application for
membership. (Note: This file will not be sent back to
*.fidonet.org addresses.)

PS - there are many great local clubs with newsletters, like CARMA, too.

They reason they aren't collecting scanners that can pick up cellular freqs is that it isn't illegal to own them. It's illegal to listen to cellular phone conversations. Yes, the legal system is screwed up.

And as to enforcement, unless a cop is standing next to somebody who is listening to cell phones, how could they enforce it? No way to tell who is listening, and who isn't.

> I read the new amendment to the communications laws.....

I think it says you cannot decrypt encrypted signals. Some systems are digital but not encrypted. The problem is that the company that makes the system won't release details on how it makes the digital signal, so, you have to figure out what type of digital signal it is. You think someone like Motorola or GE would develop a scanner that follows trunked and digital trunked signals. Someday someone will figure out a way to monitor digital signals.

1809. Can you still modify BC 2

Newsgroup: rec.radio.scanner
Date: 1995-05-03 00:00:00 UTC
From: Vaughan.Huska@odxabbs.tor250.org
Message-ID: <d64_9505031401@tor250.org>
Source record: 257303

Hi, Scott.

You asked....

-> Can you modify the BC 200xlt's that are still being sold
-> in stores or are these newer versions that can't be modified
-> for full 800 MHz. I was thinking of buying one and it would
-> help me make up my mind. Any information would be greatly
-> appreciated?

It would all depend on the date of manufacture by Uniden. There
are still some 200XLTs out there that are or can be modified for cell
reception. You may run into a problem with *all* newer Uniden product
as the chip/circuit/whatever has been totally eliminated from their
scanners. So, in fact, there is nothing to modify.

You're going to have to find a 200XLT that is, at least, last
year's model to be able to modify it for cell reception. Just ask the
retailer you're purchasing from if the all important chip/diode is still
in the model that you purchase. If this can't be had by all the
retailers you contact, you'll have to find a used one.

Good luck,

Vaughan

Our laws are not as explicit as in the U.S. that is...
You can listen to cellular conversations so long as you do not disclose
what you have heard to others.
You can still buy cellular capable scanners up here.
There are a couple of Radio shops in Toronto that sell them.
Sorry, can't tell you of any in the Niagara Falls arean (that's about
1.5 hours drive from Toronto).
Regards...Hugh...

Program size isn't usually specified in the promotional literature, but I'd
be glad to list any such information provided to me by users of the various
packages. As for DOS/Windows compatibility, I'll try to find out.

HAMFEST/COMPUTERFEST CALENDAR 1995 - NORTHERN ILLINOIS
last updated April 6, 1995 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@ihlpf.att.com. Thanks to Dennis Dale and ARRL for providing information.

MAY

May 7, Sunday: Sandwich, IL - DeKalb Hamfest, | Kishwaukee ARC. Sandwich Fairgrounds, Suydam and Getty | Roads, Sandwich, IL. For info, contact KARC, PO Box | 264, Sycamore, IL 60178.

May 21, Sunday: Wabash, IN - Wabash County ARC, info: Larry Manning, N9AFI, 5199 E. State Rd. #218, LaFontaine, IN 46940, 317-981-4735.

May 21, Sunday: Peotone, IL - Kankakee Area Radio Society, Will County Fairgrounds. info: Willis Bowser, K9IFO, 1210 N. Riverside Dr., Momence, IL 60954-3452, 815-472-2079

May 28, Sunday: Chicago - Chicago ARC. DeVry Institute, 3300 N. Campbell. Starts 8 AM. Setup 6 AM. Admission $5. Kids under 12 free. Talk-in 147.255, 444.825. Info, (312)666-1606 or (312)545-3622.

JUNE

June 4, Sunday: Princeton, IL - Starved Rock Radio Club. Bureau County Fairgrounds. Admission $5. Talk-in 146.355/955. Info, Bruce or Debbie Burton, KU9A (815)795-2201.

June 11, Sunday: Willow Springs, IL 6 Meter Club Hamfest, Six Meter Club of Chicago. Santa Fe Speedway, 91st Street and Wolf Road. Admission $5. Gates open 6AM. Talk-in on 146.52 simplex or 146.97 repeater. Info, call Joe Gutwein, WA9RIJ, at (708)963-4922.

JULY

July 23, Sunday: Sugar Grove, IL - Fox River Radio League (FRRL) Hamfest, Waubonsee Community College,

Route 47 at Harter Road, 5 miles NW of Aurora, IL. Set up Sat 7 PM, Sun 6-8 AM, open to public 8 AM. Commercial dealers, flea market, computer vendors, refreshments. VE session: 10 AM (bring original license, a copy of license & photo ID). Free parking, camping nearby. Talk In on: 146.58/147.66. Adm: adv $4, door $5. Table: 8 ft $10. For advance tickets and information contact: Fox River Radio League, Box 673, Batavia, IL 60510-673 or call

July 30, Sunday: Stickney, IL - DuPage ARC hamfest, Hawthorne Race Course, 3500 South Cicero Ave. Handicap accessible. info: Edwin Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. 708-985-0527. Talk in on 145.25 MHz with 107.2 PL. (-600). This hamfest used to be held at the American Legion in Downers Grove and was a good small to medium-sized hamfest.

AUGUST

August 6, Sunday: Peotone, Il - Hamfesters Hamfest Will County Fairgrounds, Peotone, Il. Take I-57 South to Peotone Exit 327 (East). Flea market open 6:00am - 3:00pm. No additional charge for flea market space. For advance tickets and information contact: Hamfesters Radio Club, Box 42792, Chicago, Il. 60642 or call Amateur Radio Info-Line: 1-708-535-AHAM more info: Robert Truhlar, W9LNQ, 1701 W. 101st St., Chicago, IL 60643. 312-238-0544

August 27, Sunday: Woodstock, IL - Tri-County Hamfest, Sponsor: Tri-County Radio Group, Inc. McHenry County Fairgrounds, Rte. 47 Junst North of Rte. 14. (Only 14 miles North of I90 on Rte. 47.) 6 AM - 3 PM. Advanced Tickets: $4.00, At The Door: $5.00 For advance tickets send check to: T.C.R.G., P.O. Box 3107, Skokie, IL 60076-6107 Information: 708-658-1678 Talk in on: 146.52

August 27, Sunday: Danville,IL - Vermilion County ARA. info: Gary Denison, KA9SKS, 14704 E. 2750 N. Rd., Danville, IL, 217-759-7389

SEPTEMBER

September 10, Sunday: Joliet, IL - Bolingbrook ARS Ham/Computerfest, Inwood Recreation Center, 3000 W. Jefferson. This is a medium size hamfest with indoor/outdoor flea market. Gates open 8 AM for general public. Outdoor flea market on paved lot -- setup at 6 AM. Use Exit 253 from I55, or Exits 126/130 from I80. Admission $5. VE testing 9 AM - 12 noon. Bring

original license and photocopy, ID and photo ID, plus
$5.95 test fee. Novice-only tests are free. Talk-in
147.33, 224.54, and 443.525 MHz repeaters. Indoor
table reservation, call Ed Weinstein at 708-085-0527.
Info, BARS Hotline (708)759-7005 between 6 AM and 9 PM.

COMPUTERFEST SCHEDULE

Feb 12, Sunday: Dolton, IL - Computer Show Dolton Expo
Center, 14200 Chicago Rd. 9:30 AM - 3:30 PM. Adults
$6, Kids $2. Call (708)974-3123 for info.

March 5, Sunday: Dolton, IL - Computer Show Dolton Expo
Center, 14200 Chicago Rd. 9:30 AM - 3:30 PM. Adults
$6, Kids $2. Call (708)974-3123 for info.

Computer Central, College of DuPAGE, Main Arena of the
Physical Education Building Park Blvd & College Road,
Glen Ellyn, Il. 708-940-7547. $5 admission with card,
normal admission $6.00. Opens 9:30 am - 3:00 pm.

1995 Show dates
Jan 22
Feb 26,
Mar 26 (at Harper College)
Apr 23
May 21
June 18

Orland Park Computer Show held at The Orland Park Civic
Center, 147th Street & LaGrange Road, Orland Park, Il.
9:30AM - 3:00PM. Call 708-974-3123 for information or
to get on mailing list. Admission $5.00 or $4.00 with
card.

1995 Show dates
Jan 15
Feb 19
Mar 19

Not true. A mismatch between the antenna and the receiver will degrade the
performance of the receiver as well.
```

SP>From: sjp117@psu.edu (Steven Pellegrino)
SP>Can someone explain to me what amplitude means when applied to radio waves.
SP>What I can remember from high school physics and what I gather from reading,
SP>is that it is the "height" of the wave. (hardly scientific, I know :-))

SP>What is a practical example of amplitudes effects? Do FM signals have
SP>amplitude? Does a 100 MHz signal have the same amplitude as a 400 Mhz signal
SP>Is amplitude even relevant to communications?

Amplitude is the height (as displayed on an oscilloscope) or strength of
a radio wave. In amplitude modulation, if the announcer shouts into the
microphone, the amplitude, height, strength of the radio wave becomes
greater. In FM, the amplitude is the same all the time, it is the
frequency that varies (both ways off of its center frequency).

Since static is changes in amplitude or strength of signal, AM is very
subject to it. Since FM is theoretically independent of signal strength
(once it is strong enough to receive in the first place), static does
not affect it. (What is often perceived as static is multipath
distortion caused by receiving multiple signals at the same time.)

Whether a 400 Mhz signal and a 100 Mhz signal have the same amplitude
depends on the size of the transmitter, etc. Given identical conditions,
the signals will have the same amplitude. But the signals at those
frequencies have different characteristics. The 400 Mhz signal will be
much more diminished by being put through an antenna lead in than the
100 Mhz one (lower amplitude). It may also be more absorbed by the
surrounding environment rather than reflected.

Amplitude has everything to do with communications. The stronger the
signal, the farther it will go, all things being equal. And in AM, the
stronger the louder (the automatic volume control built into most
receivers tends to make this less apparent). But not in FM. The volume
will be controlled by how much the frequency varies, not by the strength
of the incoming signal.

Hope this is some help.

Does the PSU stand for Portland (OR) State University? If so, greetings
from the capital!

1830. Re: pro-43 speaker replacment

Newsgroup: rec.radio.scanner
Date: 1995-05-03 00:00:00 UTC
From: L694047@LMSC5.IS.LMSC.LOCKHEED.COM
Message-ID: <173933C67S86.L694047@LMSC5.IS.LMSC.LOCKHEED.COM>
Source record: 257362

>Just out of interest, what happened to your speaker? <snip> e

I had the speaker replaced in my PRO-43 for doing what yours did.
I think mine was caused by overdriving it - hanging out around the airport
very near the end of the runway with the volume turned WAY up a few times.
Finally the speaker could take it no more. BTW, Bob Parnass has posted a mod
to improve the audio of the 43, causing the audio to be a bit crisper (sort
of turns up the treble) so you don't need to turn the volume up quite so much.
The mod is involved IMO - removing one surface mount component from one of
harder-to-get-to boards. It is posted in the hamradio mods archive on many
SIMTEL sites. It seems to have done what it claims, and you might want to
try it.

Thank You-Thank You-Thank You!!!!!!!!!!!!

I just did the squelch tail mod on my Pro-51 and WOW!!!! What a difference. There were times I was ready to smash the radio when it would be scanning and stop on a lot of very short transmissions one after the other, The NOISE it would make was louder than the transmissions ... but now......Thanks Again!!!!

Call 1-800-890-6999 for a copy of U.S. Scanner News. You will find a lot
more scanner information in it then ANY other scanner publication on the
market. Something of intrest is the Frequency Form, every month they
print the FCC license updats for the last 30 days. U.S. Scanner News is
also published every month, not every other month like Nat. Scanning
Report. Get a copy and be the juge yourself.

James,

I believe 400MHz is subtracted from the 800-900MHz freqs.
e.g. 862 MHz - 400 MHz = 462 MHz

1834. AR8000, SCOUT, APS-105, Optoscan

Message-ID: <1995May3.092007.14602@ivax>
Source record: 257366

Does any one have experience with the Optoelectronics APS-104 Active Preselector? I am playing around with various parameters in a set-up utilizing the SCOUT, AR8000, OptoScan 456, and a PC....does the APS-104 really work?

Supposedly, it is a 10MHz-1GHz tunable band pass filter, has a bandwith of 4MHz over entire range, and extends near-field detection by 10X.....It is rather expensive...before I buy it, some opinions would help in my decision making. I cannot keep from wondering if this may be a REALLY overpriced widget box...

Also, has any one played around with the SCOUT's CX12AR interface? What can it do for me? PerConn has some software that allows downloading of captured frequencies and cross-referencing with their FCC database. Sounds neat, too!

Since it is just outside the 2 meter ham band (144-148 MHz) and
you're at an Air Force Base, it's probably Civil Air Patrol or perhaps
MARS (Military Affiliate Radio Service).

I believe LESCOMM does a mod to the PRO-2006 that will do this, and
I have seen ads on circuits to eliminate this in Popular Communications
and Monitoring Times. If you have a PRO-2006, LESCOMM has a whole group
of mods, but most of them are listed in Bill Cheek's two Scanner Mod
books, so you can do them yourself if you are so inclined.
If you're using a portable scanner, the space problem makes this type of
circuit addition more difficult of course.

Uniden Bear Tracker BCT2--$75

Pre-Programmed scanning radio with highway patrol warning alert.

Fully pre-programmed memory contains all frequencies for Highway Patrol,
DOT, Local
Police and Weather
Band Coverage includes Low, High, UHF, and UHF "T" public service bands

The ONLY protection against ALL forms of speed measurement: Radar,
VASCAR, Airplane,
Clocking, and Laser

In excellent condition and includes all original mounting hardware and
electrical connections. It hooks right into your existing AM/FM antenna
with splitter.

Asking $75 or best offer (Retails for $199.95)

>
Nope it is perfectly legal to monitor cell in Canada, as long as you don't
reveal what you heard. Some scanners may be available with full coverage,
but some like RS will sell locked-out scanners, as the Canadian Market is
small I suspect that we simply get the USA version from them.

Th> Interesting, the Pro-26 does the same thing with the same
Th> keysequence. Could these radios be similar hardware inside?

The '26 is a marriage of Uniden and RS features. From what I have heard
so far, though, the performance between the '26 and the BC 3000 is not the
same. So far, I have heard complaints of intermod on the '26 that isn't on
the 3000. I find the '26 less sensitive.

>
> See my BC3000XLT review in April 1995 Monitoring Times. It contains
> a table of other undocumented keypad tricks I found.
>
Th> Have you looked at the Pro-26 yet? I'm curious to know if
Th> you might have found any keypad stuff that I haven't found.
Th> All I've found so far are:

Th> 1) The above checksum/rev thing
Th> 2) L-OUT, 2 & 9 to load the first test freq set.
Th> 3) SHIFT, 2 & 9 to run the display test then L-OUT, 2 & 9
Th> during the display test to load the second set of test
Th> freqs.

Most of the tricks on the 3000 are already stated in the manual for the
'26. One interesting thing that is not documented is to hold the LOCKOUT
key for about 5 seconds. Any locked out channels are unlocked in the
selected banks.

Source record: 257177

Hi, George.

You stated....

-> If a newsgathering operation can obtain a letter of consent from an
-> agency that is on an 800 trunked system they can get a compliant
-> radio system. Very expensive, but permitted if consent is given.

If the system in question is on a trunked system, really all you would need to know is the PL tone frequency that is usually in Hz. Then you would enter that frequency into your tone board (if your scanner is equipped with a tone board, that is). Having entered that PL tone, you would be able to monitor the service(s) you require without having to monitor the other services or have to get any letter of consent or purchase a compliant radio system.

-> Thought you would want to know

No, no. Thought YOU'D like to know.

-> George Griswold

AC>Somewhere in the 450-480 range, there is a signal every day that really
AC>irritates me. It is a voice (or voices) accompanied by a loud squeal.
AC>The thing that bothers me is that it is EVERYWHERE. That entire range
AC>is ruined by the signal - it covers that much space. I thought maybe it
AC>was a nearby signal - but it happens all over town. I'll even send a
AC>brief sound file of it if someone would like to take a crack at
AC>figuring it out.

So far , it sounds like uhf pagers, .. all over town , squeals- the
tones to open the squelch on the actual pager... the voices... people
leaving messages. is your scanner dual conversion.. ie will it poick
up the same signal 21.4 ish mhz away from the original freq? This may
explain whyu you are getting paging on a police freq. Furthermore, many
commercial freqs users also have paging . ie where I work we use two
ways, however, the maintenace guys have pagers, so when we need to get a
hold of them, we call the guard room and have them paged. we hear the
page over the two way.

Gary Jacek (gjacek@cyberstore.ca) wrote:
> Also, I read somewhere that SWR is not important if you are
> only receiving a signal. Is this true or is it hogwash?

It is arguably less important but still important. The SWR
is a measurement of the antenna match. A high SWR is
potentially damaging to a transmitter. For a receiver,
there is no risk of damage but a good match will certainly
improve your system performance (e.g. receive sensitivity).

For Sale: Radio Shack/Realistic Pro-39. For those unfamiliar with the radio and its ranges, they're as follows.
200 Channels - 10 banks of 20 each
10 Monitor channels
2-speed scan
Coverage: 30-54, 108-136, 118-136, 136-174, 380-512, 806-960.

Note that the frequencies listed above list full 800 Mhz coverage. The radio's already been modified to receive cellular phone frequencies. It has Nicad batteries and the charger with it. My Asking Price is $175.00 OBO. The radio is in excellant condition and if you have anymore quesitions feel free to email me. I am selling to get another base unit, hard for me to justify four scanners. Email me at craig@primenet.com, I also live in Phoenix,Az if that matters to anyone

There are several tricks and mods you can do on the 200XLT. Look under /pub/hamradio in ftp oak.oakland.edu. The info involves cellular restoration, installing an AM/FM switch, and clearing and installing test frequencies into the channels.

Let me know if you have help finding them.

I've also seen this kind of antenna on several embassies here.. wouldn't mind knowing what freqs they operate on. One of the embassies had a pair of antennas that looked something like the following sideways. Sorry, can't draw it in ASCII well. I could upload a small JPG of it, if it would help. It was mounted next to two satellite dishes. It's white in colour. Can someone tell me what it is for? I've seen it at quite a number of places.

Yep, theres a few. There are ones that will covert 800MHz to 400MHz and
some freq to Military . I'm waiting for the cash to get one that will
convert mil air freqs to something my BC200XLT. I think they're around
$50-$80.

>if in "that higher is better"... you would only know that height MAY
>have contributed toward better scanner reception...

Well, what I'm factoring is that the couple of specific scanner antennas
I have for my scanner don't pull in the same amount of signals that the
TV antenna did. I would lock on to a freq while on the TV ant., switch
to the different scanner ants in my living room, and could not pick up
the signal. Back to the TV ant. and there it was again. Considering that
the TV ant isn't designed to pick up the same stuff as the scanners ants.,
it did pretty good. It isn't the best TV ant., as I'm in a city and don't
need fringe area coverage, so its rather small and not a lot of elements.

Regardless of that, it picks up the police, fire, CB, and apparently
coredless phones fairly well (during a freq. search only, of course :-)).
It covered the 800-900 freqs fairly well also.

So, for an Ant. that wasn't designed to work for a scanner, but *is* a lot
higher up in the air than my other antennas that are designed for it, it
worked better. My conclusion is that height means a lot, a poor antenna
up in the air seems better than a good antenna down at ground level.

I bought my Pro 2006 for $300.00 new, about 1 year ago. The price
included the mod. But I think that you should be able to get $300.00 out
of your scanner. (personally I would go no less than $300.00)

Actually We Do Monitor this Frequency ALL the time. It is known as an
Emergency Locator Transmitter. When a plane goes down the vibration or
shock of the impact sets this device off and we are then able to
triangulate the location of the downed AirCraft. Keep in mind that
sometimes due to a ruff landing or equipment malfuntion these ELT's do
go off. We still locate the AirCraft and ask them to turn off the ELT.
This is the MAIN purpose of this Frequency. Hope this helps out! --))

After reading this thread, here is the only "constructive
advice" that I can think of for Scantrix and its ilk:

You appear to be in violation of U.S. and Canadian
copyright laws. The more people's work you give away or
sell for your own gain, the bigger your risk of having
someone demonstrate the realities of criminal and civil
liability.

And, no, it ain't "fair use".

I run a newsgathering agency called Media Page and we gather breaking stories from 3 sources; the scanners (monitor over 300 freqs), people calling in tips, and the police & fire departments actually call in info on breaking incidents. In fact, several agencies have direct access into our system via computer.

One thing no agency can deny is that they MUST have taxpayers money to exist & expand. Taxpayers will vote according to the LAST thing they remember about the agency. A fire dept cooling ashes doesn't get more money, one that is SAVING a house or child get LOTS of money. The only way they can get this image to the taxpayer is via the media. They want the message to get out and want the coverage.... as long as it doesn't hamper their operation....

I know of at least two Sheriff's Depts that either give permission to the media to have radios programmed or one of them actually leases radios to the media for about $30 per month. Receive only, but get's the job done. Most agencies to not understand the consequences of either trunking or digital sytems when they are sold the "Bill of Goods" by some radio salesmen. Their intent is NOT to stop the media but to get better use of their resources and they just buy these massive EXPENSIVE systems that make them feel they are NOW doing a better job.

It is also ILLEGAL to convert and monitor scrambled (digital) signals, if I read the new amendment to the communications laws.....

Date: 1995-05-04 00:00:00 UTC
From: dominic.post@the-boss.com
Message-ID: <1f1.10067.3415@the-boss.com>
Source record: 257244

Z_>Does anyone know how to do a cellular mod on the BC200XLT ??

Brian; Here it is.
Uniden BC200 Business Band Restoration

Prior to performing this modification take the following precautions to insure that damage does not occur to any component inside of your Uniden scanner.

A) Try to perform the modification in a low static electricity environment.

B) Avoid wearing wool clothing or walking across a carpet (in low humidity areas) as well as touching your scanner or any component inside the chassis.

Required tools: A small phillips screwdriver and a fine-pointed snipping tool.

MODIFICATION PROCEDURE ----------

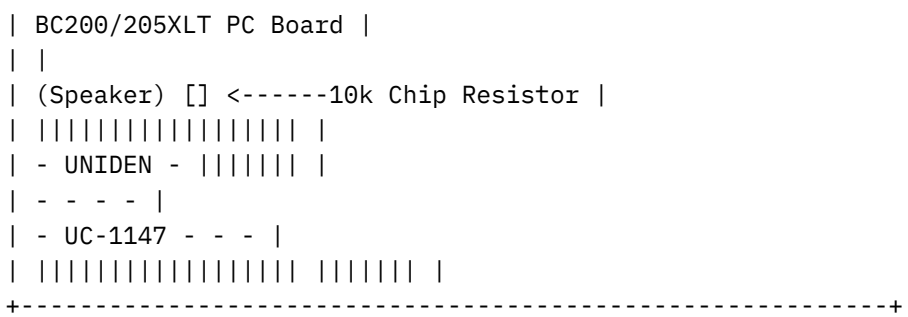
1) Disconnect the antenna and slide off the battery pack from the scanner.

2) Remove the two screws from the back of the scanner plus the two screws that hold the battery pack retaining spring in place as well as the spring itself.

3) Carefully pry the bottom of the rear of the cover from the radio then remove the cover.

4) Locate the two small screws at the base of the circuit board and remove them. Gently pull the front panel from the mainframe at the BASE (the two halves are connected by a plug so their will be some resistance) and separate them.

5) Consult the illustration below and locate the IC labeled "UNIDEN UC-1147" and the 10K chip resistor positioned above the letters "DEN" on the integrated circuit. (The resistor will be color coded brown-black-orange).



6) Using the small wire cutters, cut the resistor in half. (Be careful as the resistor may shatter causing debris to scatter along the PC board). Be sure to remove all left over residue by blowing or brushing it away. The solder pad that the resistor was soldered to may peel up as you remove the resistor. You may peel the pad off if done carefully not to disturb the surrounding area or components.

7) To reassemble insert the top of the front panel into the slot under the volume/squelch control panel while noticing the alignment of the dual in-line connector at the bottom of the board with the mating socket and finally pressing it (the front panel) in place. Be sure that the holes in the PC board line up with the holes in the plastic standoffs under the board.

8) Insert the two screws and gently tighten. Replace the back cover by inserting the top of the cover into the slot under the volume/squelch control panel. Press the cover into place, insert and tighten the screws. Replace the battery retaining sprint with the slotted side facing the notched hole. Insert the two remaining screws and gently tighten them. Slide the battery pack into place and switch the scanner on to make sure the display comes on. If not, check that the battery is charged and/or the battery retainer spring is properly mounted or dual in-line connector was misaligned during reassembly. Assuming the modification and the reassembly was successful, switch the scanner on, press manual, 845.0, E and within a couple of seconds you should see the frequency 845.000 MHz displayed. The modification is now complete!

> In theory it is illeagal [sic] to listen to these calls, so this is just
> theoretical.

Not at all. The courts have ruled "There is no expectation of privacy." On the other hand, Congress legislated a law making cellular phone illegal to listen to. If they would legislate portable phones also, the courts would then rule accordingly. It is a fact that "There is no expectation of privacy" on cellular also, but the industry PAC fought hard for the bill. They didn't want the customers to know people listen to them, and when it got out that everyone did, they got the bill into law. The cellular customer is so fucking stupid they talk about everything there. The police also are heavy customers and they throw away all security they would protect on their normal channel. The reason portable phones are exempt is that they provide a huge source of intelligence. Lots of crimes are nipped in the bud by active monitors who collect hefty rewards. The snitch business is huge in America.

I was told my unit was from the last modifiable 200XLT lot from the '94 production run. Look
for the Date of Mfg. on the back of scanner.

Mine is: 0 A I D

^ D = April '94
C = March
B = Feb, etc.

Any unit manufactured after 4/94 is not modifiable (nothing is blocked).

While we're on the subject, does anyone know if the the mod involving the 10k resistor (R-215)
actually works?

What about the battery mod involving D-203 and R-208 (what exactly does this do)?

There is a legal difference between "digital" and
"encrypted"(scrambled).

>system won't release details on how it makes the digital
There are also regulations against cracking "proprietary"
systems, which MAY mean that figuring out how to monitor
the signal is illegal even if it is NOT encrypted.

>like Motorola or GE would develop a scanner that follows > trunked and

Not them. They wouldn't be able to market their systems as
"private" or "scanner-proof" on one hand and sell scanners
that monitor them on the other hand.

Remember Radio Shack's dilemma with the PRO-2004 and their
membership in CTIA?

You really should read these articles before you reply to
them. "Scanner Master Upstate New York Guide" is not a
"list", nor does the word "listing" appear in the title.
It is a full-size book, published by Scanner Master Books
in Massachusetts, USA.

Does anyone know who uses these frequencies in PA? What are they used for? They're licensed to the Attorney General's Office according to Police CAll. They were using names like MFC 22 and MFC 19. They're not from the area (Franklin County) because they were talking about hotel rooms. Please e-mail or post up if you can help me out at all!!

-thanks,

Darren

05/03/95 YE PUBLIC NOTICE! 05/03/95

ULTIMATE SCANNER BOOK COMING SOON!

At long last, I have complete my 3rd book, the Ultimate Scanner and it is now in the hands of the Publisher! Publication date is expected to be May 12, 1995, when the book should be available, barring problems.

A special discount program has been established for those who want to order autographed copies in advance. The current and expected price schedule is:

Prepaid orders until June 30, 1995: $24.95 + $4 *S&H Expires 6/30/95
All orders after June 30, 1995: $29.95 + $4 *S&H

*Canada & other foreign surface: $7.00 S&H

Orders are now being accepted either in the MALL on our BBS, or at our voice business line (619) 578-9247 (1:30pm-5:30pm, PDT) or by US Mail. Shipment is expected to be between 5/15/95 and 5/30/95, depending on production and everything going well. E-mail ok, too.

NOTE: The book is not yet in print, so we can't attach a more descriptive paragraph of the ULTIMATE SCANNER yet, but will do so as soon as it is published. For now, The ULTIMATE SCANNER is everything and more that my first two books are.

Hi,
PRO-34 for sale. Original freq range covered 30-54, 108-136,
136.005-174, 380-512, 806-823.9375, 851.1125-868.9375,
896.1125-960 MHz.

Have done the mod to open 800 range. However, it has problem
receive signal between 872-896. Don't know why. Works great
otherwise.

Good for first time user. Asking price: $80/BO + shipping/handling.
COD or Prepay. Thanks.

Hi All,

I just bought a PRO-62 and was wondering if there were any mods available for it. One dissapointing thing I just found out was that it is unable to get military air. I was hoping for a mod to enable that in particular, but I would also be interested in any other mods.

Thanks much,

> accidents.

Agreed, but, the fine system in Oregon is out of control. $50 will get
the point across to wear your seatbelt just as much as a $500 fine would.
The only difference is that $500 is just plain greedy.

If the state was concerned about our safety then why is it that a
poseession of a controlled substance only carries a $250 fine and
speeding STARTS at $325. The whole point of Oregons draconian fine system
is to make money plain and simple.

> Otherwise I'd definately consider stopping the minivan to fine the driver for
> not having the kids buckle-up.

Well flashing your high beams (briefly, not continuous) is a signal to
the driver in front that you would like to pass. It's legal, and it's in
the drivers manual. If someone is in back of you and you see lights
flash MOVE OVER if it is safe to do so. If the person behind you is being an
asshole tailgaiting you with his/her brights on the you should also move
over. If the guy in back is pissed off he may decide to do something
stupid just to get around you, so, avoid a dangerous situation and let
the car pass. Yes the dude was an asshole and should pulled over but not
letting him pass will only make things worse.

> If, in your example, the red car was doing >100mph instead of 85, the choice
> would obviously again be in favor of stopping the red car.

> In any case, I'd expect a cop to make an equally fair judgement based on what
> he/she thinks is reasonable and sensible.

Exactly, get rid of speed limits on (Rural) freeways and let the police
figure it out. It works in Germany. 100 in Wyoming is safe.

> That's one of the things cops ought to be taught at police school.

Unfortunately they're taught that speeding is death, the only ones
"educated" enough to handle such high speeds of 85 are the police.

As luck would have it, I will be ushering a concert this weekend (Eagles in Austin, TX for those interested...). My question, how would I go about searching for the freqs the security people will be using, and/or the local police? The security people with the radios haven't the slightest clue, and I didn't see any indication on their radios, which are the standard Motorola two-way which they told me they rented from somewhere else. Can anyone recommend freqs that I should limit search? Perhaps everything with a Bus. next to it in the manual? I guess what I'm asking is, do those little two-way radios operate in some known band that I could narrow it down a bit? I've used similar radios in town here, and I know those worked off a repeater in the 400mhz area. Is there any way to tell if a repeater would be involved here too? Sure would be a waste seeing as how everyone will be within ~100 yards radius... Oh well, any info is helpful.

thanks,
mike

Is anyone in the Boston MA. area interested in starting an online notification network? It would be interresting to find out what everyone hears out there. If enough people get involved it could get interesting. I have found in the past ies. It would be great to have a local network of people to swap frequency information with. It seems as though in this area things change more rapidly than any book can keep up with.

Anyone interested? If so leave me some mail and we will get something going.

If I recall, the Uniden BC210XLT wasn't sold for very long. It came out quite a bit *after* the BC800XLT and it didn't cover *any* of the 800 MHz band. Although they were marketed in consumer discount stores, like Service Merchandise, I don't think many scanner hobbyists bought them because they lacked 800 MHz coverage and offered nothing new -- basically a remanufacture of the older Electra BC220 & BC20/20 with the same feature set.

What kind of modifications are you seeking?

If you have a squelch problem, I can probably furnish the information to shorten the hysteresis.

If you develop a modification, please post it.

Hi, Tim.

-> Any suggestions on good places to buy scanners in Canada ?

Seeing that you're from Halifax, I don't think you'd want to
venture all the way here to Toronto to get a scanner, but if you wish,
call these places and perhaps you can do a mailer of your order;

1) Lakeshore Electronics, 3471 Lakeshore Blvd. West, 1 416 259 7135

2) Norham Radio Inc., 4373 Steeles Ave. West, 1 416 667 1000

3) Atlantic Ham Radio Ltd., 368 Wilson Ave. 1 416 636 3636

Those 3 are the main places that we here in Toronto go to for
scanners and related equipment.

Is there nothing available in Halifax?

Good luck.

Cheers,

Vaughan

CM>12.5, which those frequencies are at.

Not exactly, you can still recieve them 167.4375 Mhz will round off
to 167.435 Mhz in any normal scanner and you will still hear the
activity, it's that the 12.5 Khz standard (Federla VHF) did not go
over too well in the older scanners, but it is now getting better in
the newer Turbo type radios (ie RS Pro-200x).

SWR is always there, transmitting or receiving, poorly-tuned or perfectly matched. If your antenna is purely resitive and equals your feedline impedance, the SWR is 1:1. If you only have a receiver, it's harder to measure the SWR, but it's still there. If you're only receiving, does SWR matter? Now that's harder to answer. Depends on what you're receiving. If you want absolute maximum receive performance, such as EME or other extreme weak signal work, yes, it probably matters. If you're listening on HF or VHF/UHF FM for example, don't worry about it.

One might (at first glance) believe that SWR is only a problem for transmitters. But it always is a good idea to transfer the most signal you can from the antenna to the receiver, and to do this you should pay some attention to receive SWR conditions.

Even for receivers there is the problem of LOSS due to SWR in the transmission line.

Canadian law permits the reception of cordless, cellular, etc. as long
as you do not divulge the contents of the transmission. No mobile
restrictions other than to turn the radio off while travelling through
blasting zones. Enjoy your trip.

Are the 46's that are currently on sale at RS still modifiable?
I went to buy one and the RS drone read from his computer screen
"only units with orange dots under the barcode are legal for
sale in the U.S.". I assume that this meant orange dot units are
not modifiable. All the guy had were orange dot units so I bought
a PRO-26 instead.

How can I tell if the PRO-46's that the guy's got are modifiable?

I had a few questionsl re: the 9000XLT 1. is there a computer interface that can be hooked up, I know there are to line out ports one being an AUX and one bening a Line out. If so, what can I do with the computer interface, I have heard different things about them and would like to know the final truth. Basically is it worth it. 2. I have a RS discone antenna and I can't to recieve freq in the 25-50 range and posibly higher , i haven't really check it out yet. I hear the I need a vertical element to this antenna to increase the freq range down, is this true, and if so can I have recomendation for good scanner antennas that works well in all bands. It is also very important that I hear the 150-160Mhz range as I like to listen to Fire and emergency dept nand one of them is 45 miles away and iot wasn't until I got the 9000 that I could even hear it. I have some tall buildings and power and telephone wires between me and the sation I want to hear. Any suggestions would be apprieciated since I don't know a bunch about scanning, yet. (I guess that's why I'm on this newsgroup.

Thanks in advance

: Big amber plastic blob thing

: Where did you see it?
: Who sells it?
: How much is it?

It was in one of those home gadget catalogs where you can always find
those interesting little tidbits of technogarbage that will never work. I
think it was around $20. It just slid over the top of the antenna.

: These transmitters are usually low power (10 - 100 milliwatts)
: which is really all you need at these frequencies (even for a
: police radar jammer). In light of the fact that these are low
: power and often used in motion detectors (which are not licensed),
: you may not even need a license.
: I have seen more powerful units (250 milliwatts) available.
: Assuming that these require a license, a ham license should cover
: you. Even if you are not licensed, how is anyone going to know
: the difference between a 250 milliwatt transmitter and a
: 100 milliwatt transmitter? I wouldn't worry a whole lot about
: a transmitter license.

The reason a license is nessicary is the health effects of GHz and higher frequencies. I am not a ham but, I have taken my license test.

The problem with such high freqs is that they can cause serious eye/brain/muscle/etc tissue damage if projected towards a person or if the design of the horn is not right, the person will get a serious dose of microwaves. I think the reason that the user/builder needs to be licensed to work with > 250 mW is that usually the licensed builder knows what to do and not do with these sets. I am not saying that everyone who doesn't have a license is a moron but, I am saying that as a rule, the licensed technician knows more of what is going on.

BTW, why are we worrying so much about jamming radar?

The Bearcat BC-300 scanner has been around for many years.
Here is a reprint of an article I published in my column in
the August 1989 issue of the RCMA Journal:

DON'T JUNK THAT OLD BEARCAT BC-300

Copyright 1989, Bob Parnass, AJ9S

Although the Bearcat BC-300 scanner is no longer available,
it occupies a fond place in my collection. I exercise lit-
tle self control when I see a used BC-300 for sale cheap,
and have adopted two broken units. They make fine radios
after repair.

The BC-300 was the forerunner of today's 760XLT. It was a
50 channel feature laden scanner, introduced around 1979,
back when Bearcat was part of Electra. Retail sales of the
BC-300 continued until 1987, when it was discontinued by
Uniden.

Although Electra offered the pricey BC-350 as a step above
the BC-300, firmware bugs and a batch of bad power
transformers doomed the 350, and the 300 remained the jewel
of Bearcat line.

It's easy to see why the BC-300 model was offered for
several years. It boasted premium features like a clock, a
carrier operated solid state relay for tape recorder activa-
tion, a transmission counter, and a Service Search of 11 ROM
banks of preprogrammed channels. For memory, the BC-300
used EAROM (electronically alterable read only memory), so
backup batteries were not necessary. The Dog House, a radio
shop in Fairfax, Virginia, at one time offered the DH 1000,
a 1,000 channel adapter for the BC-300! Unfortunately for
federal band listeners, the BC-300 lacked coverage of the
138-144 and 406-420 MHz bands.

While outwardly impressive, internal construction was typical of Electra hand wiring in that era -- a bit messy. BC-300 schematics show at least 100 components changed between earliest and later units. The scanner went through many circuit design changes, but rather than changing the printed circuit board, new components were tack soldered on the foil side in different positions.

Electra stamped all of its scanners with a manufacturing date code on the rear of the cabinet. The code is comprised of a single character (C = Cumberland, Indiana, P = Puerto Rico), followed by four digits denoting year and week the radio was built. For example, "P2284" denotes the radio was made in the Puerto Rico factory during the 22nd week of 1984.

Switching power supply failure was common in early units due to insufficient capacitance. Electra responded by increasing the value of capacitor C98 from 22 ufd/16 v to 47 ufd/25 v, but I recommend 47 ufd/35 v. If your display is getting abnormally dim, C98 is probably the culprit, as it was in five Bearcat scanners I fixed.

Squelch preset potentiometer R81, mounted on the radio circuit board, was misadjusted in new units, requiring readjustment after the components aged.

In one radio, I replaced Q9, a small signal PNP transistor. Its failure caused the BC-300 to become deaf on all but the UHF band. Failure of squelch gate transistor Q15 caused the squelch to remain open at all times.

Cold solder joints, especially on the wires and ribbon cable connecting the radio board to the logic board, have been responsible for other failures.

I have seen serious IC failures in three BC-300s built around 1984. These include CPU chip IC201, memory chip IC202, and IC203, not in stock at your your local Radio ShackO.

The BC-300 circuitry, especially on the radio board, is very similar to the circuitry in the the BC-220, BC-20/20, BC210XL, and BC-350, so some of the previous remarks may be applicable to these models as well.

I can neither furnish schematics nor repair your radio. If you come across a broken BC-300, obtain a schematic from Uniden and spend some time troubleshooting. If you give up, your BC-300 can be fixed by Electronic Repair Centers in Franklin Park, Illinois, (708)455-5105. I'm told they do good work. The BC-300 is a classic scanner and worthy of your efforts.

Here it is:

| From moy@xp.psych.nyu.edu Fri Sep 23 13:54:29 CDT 1994
| Article: 4848 of alt.radio.scanner
| Xref: nntpa alt.radio.scanner:4848
| Path: nntpa!att-out!pacbell.com!sgiblab!swrinde!cs.utexas.edu!not-for-mail
| From: moy@xp.psych.nyu.edu
| Newsgroups: alt.radio.scanner
| Subject: PRO-51 Mods
| Date: 23 Sep 1994 11:39:18 -0500

| Hello fellow scanbots,
|
| The following describes how I modified a PRO-51 to get rid of that
| awful beep. With this change, you won't be able to hear the low
| battery warning, either. I came up with this independently after
| failing to discover anything on the PRO-51 in the net.archives.
|
| This procedure should void your warranty and may wreck your radio.
| Neither I nor my employer assume any responsibility for any damages
| you or anyone else may incur from this information!
|
| ==Radio Shack PRO-51 modification to remove !!BEEP!!==
|
| This change was performed successfully on a unit coded "11A3."
| The CPU in this unit was marked "Uniden UC1581." Use the
| following information at your own risk!
|
| Orientations are with the set flat on a work surface, LCD display
| facing down, with antenna BNC and knobs facing away from yourself.
|
| As with any electronic instrumentation, remove all power and take
| all necessary precautions to prevent damage from electrostatic
| discharge (ESD).
|
| CAUTION:
|
| Be aware that parts of the circuitry will *still* be powered!

| There is a capacitor on the digital board that keeps the channel
| memory alive. This capacitor may contain enough energy to damage
| the electronics should a short occur.
|
| Opening Case
|
| Fortunately, this set is very easy to open. Open battery
| compartment and remove batteries. Remove four screws: two
| straddle the sticker on the back of the cabinet, two others at the
| upper part of the battery compartment. There are two small
| plastic detents at the floor of the battery compartment. They are
| directly downwards from the "-" and "+" legends, which are molded
| on an extension of the removable back. These detents will need to
| be unhitched to allow the back to separate from the front.
| Pull back off gently.
|
| Remove RF board
|
| The RF board is attached to the top panel, which contains the
| volume and squelch controls and the antenna connector. At this
| point, the board is essentially free and will separate from the
| rest of the set when the header connector at the lower right is
| pulled apart. This header provides electrical connections between
| the two boards. Lift the RF board straight out, exposing the CPU
| board.
|
| Remove shield from CPU board
|
| The metal shield is held by four screws. The same screws also
| fasten the board, which forms part of the keyboard, to the front
| of the case. Remove screws and lift the shield straight out.
| Remember the correct orientation of the shield. Do not allow CPU
| board to come out of case. DO NOT drop any hardware on to this
| board, nor allow the shield to contact any of the components.
|
|
| Cut circuit trace
|
| The ASCII diagram below illustrates the area covered by the lower
| right corner of the shield that was just removed. Cut the trace that
| leads to the center one of three plated-through lands. Take care not
| to damage any components or other traces. Do not put excessive force
| on board. Remove any metal particles before re-assembly.
|
|
[104]

|
| =========
|
|
| Hello fellow scanbots,
|
| Radio Shack PRO-51: Modification to shorten squelch tail
|
| This change was performed successfully on a unit coded "11A3." The
| CPU in this unit was marked "Uniden UC1581." Use the following
| information at your own risk! Neither I nor my employer are
| responsible for any damages you may incur from this information!
|
| Orientations are with the set flat on a work surface, LCD display
| facing down, with antenna BNC and knobs facing away from yourself.
|
| As with any electronic instrumentation, remove all power and take
| all necessary precautions to prevent damage from electrostatic
| discharge (ESD). This modification requires fine soldering and
| familiarity with surface mount devices.
|
| CAUTION:
|
| Be aware that parts of the circuitry will *still* be powered!
| There is a capacitor on the digital board that keeps the channel
| memory alive. This capacitor may contain enough energy to damage
| the electronics should a short occur.
|
```

| Parts required: One 1/10th watt carbon resistor, 100K to 220K. Value is
| not critical. A lower value shortens the time the squelch remains open
| after incoming signal stops. The resistor should physically as small
| as possible.
|
| Opening Case
|
| Fortunately, this set is very easy to open. Open battery
| compartment and remove batteries. Remove four screws: two
| straddle the sticker on the back of the cabinet, two others at the
| upper part of the battery compartment. There are two small
| plastic detents at the floor of the battery compartment. They are
| directly downwards from the "-" and "+" legends, which are molded
| on an extension of the removable back. These detents will need to
| be unhitched to allow the back to separate from the front.
| Pull back off gently.
|
| Remove RF board
|
| The RF board is attached to the top panel, which contains the
| volume and squelch controls and the antenna connector. At this
| point, the board is essentially free and will separate from the
| rest of the set when the header connector at the lower right is
| pulled apart. This header provides electrical connections between
| the two boards. Lift the RF board straight out, and set the rest of the
| radio aside. Flip RF board over, keeping BNC pointing away from
| yourself.
|
| Add resistor
|
| Refer to the ASCII diagram below. Bend one of the resistor leads close
| to the body of the resistor so that the resistor forms a hairpin shape.
| Trim leads and solder the new resistor in parallel with the chip
| resistor marked "105." The latter is positioned between the two
| surface-mount IC's towards the bottom of the RF board. Press the new
| resistor parallel to the circuit board, making sure there are no
| shorts.
|

Tom, The 210 If I recall is a rather old line scanner - I think I had
one 20 years ago although I believe revised models came out increasing
channels from 10 to 20. But it is basically a vhf scanner so I don't
think you will be able to get any cell mods or other fancy stuff.

Are you sure Sabres use DSS=Digital Spread Spectrum and not DES=Digital
Encryption Standard? I haven't heard of any one besides the military
using DSS. New cordless phones supposedly do not have "True" DSS rather
they just switch freqs quickly, someday I'll hook one up to a Spectrum
analyzer. The point of DSS is to prevent interception of the signal and thus
finding your location. Police have no use for DSS and the cost would certainly
be $$$. DES will prevent any civilian from eavsedropping. Does any one
know what type of encryption and the number of bits the Cordless
phones are using?

I would think that the best way for everybody to see them would be if you saved them as a .bmp file. They uuencode them like the .gif/.jpg files and post them.

Nope, no visisble difference, other than the new version's ink isn't wearing off. It's pretty obvious that the printer either used the wrong ink on the first batch of keypad, or failed to prep the plastic correctly. The new keypad is visually identical.

So if someone came out with a scanner that was capable of following
Motorolas trunked system and they cracked it on their own, would it be
legal to sell it? It seems if someone really started crunching numbers,
the logic of the system wouldn't be too hard to figure out.
Of course, Motorola would probably add some patch to the software and
render it useless.

Just thought I would point out that Optoelectronics also has a model
in the $150 range. ($139, in fact, according to the price sheet I
picked up at Dayton.) I suspect that comparing Startek's low-end
model to Opto's high-end model is like comparing apples and oranges...

Are you implying that your state really doesn't care much about public safety
and is more concerned with balancing the budget? I'd rather not want to believe
that to be the case. The seatbelt issue is IMO a problem that is very easy to
solve and will have a very positive effect concerning safety.
It would be perfectly fine if cops would check peoples seatbelts in
strategically useful places, like at the exit of big parking lots (malls...),
Freeway entries and exits. I don't think it really matters how high the fines
actually get. IMHO *not* wearing a seatbelt won't give you any advantage
whatsoever over wearing one, at least not one that would make up for the hassle
of being stopped by the police (and actually having to pay money for your own
stupidity as well). Not to mention the fact that you multiply your odds of
getting killed in your next car-crash. BTW, I'm sure the insurance rates would
also be adjusted in case of a decreasing number of heavy injuries in car
accidents.

> Scenario--- Your a cop. In the U.S. (We'll say Oregon). You see A) A red
> compact car going 85 MPH then you also see B) a minivan with kids
> bouncing all over the place in the left lane doing 70 MPH.
>
> What is your response:

Assuming that the other driver was forcing the minivan off the left lane
(signaling with his lights, driving bumper to bumper) I'd obviously consider
his driving to be a greater danger to the public and stop him/her.
Otherwise I'd definately consider stopping the minivan to fine the driver for
not having the kids buckle-up.
If, in your example, the red car was doing >100mph instead of 85, the choice
would obviously again be in favor of stopping the red car.
In any case, I'd expect a cop to make an equally fair judgement based on what
he/she thinks is reasonable and sensible.
That's one of the things cops ought to be taught at police school.

Can someone tell me what information the nearly subaudible digital signal on each voice channel of a Motorola trunked system carries? Is it DPL? Is it a unique code based on the individual transmitter or the talkgroup that the unit is transmitting on? What is it's purpose? Also, there was a very detailed description of the method used by Motorola trunking systems a while ago on this newsgroup. Does anyone have it that can repost it or email it to me?

>: you may not even need a license.

>The reason a license is nessicary is the health effects of GHz and higher
>frequencies. I am not a ham but, I have taken my license test.

I believe that, in general, no license is needed for transmitters < 100
mW.
This applies to all frequencies with no special exceptions or additional
requirements at the higher frequencies.

>The problem with such high freqs is that they can cause serious
>eye/brain/muscle/etc tissue damage if projected towards a person or if
the
>design of the horn is not right, the person will get a serious dose of

Perhaps, but the license requirements do no require knowing anything
about the health effects of microwaves.

>BTW, why are we worrying so much about jamming radar?

I'm not worried about it; someone asked about. Besides, "inquiring
mind want to know."

1948. Re: impounding illegal imports?

Newsgroup: rec.radio.scanner
Date: 1995-05-05 00:00:00 UTC
From: mike@shien.ist.csuohio.edu
Message-ID: <1995May5.154219.18342@news.csuohio.edu>
Source record: 257194

In reponse to several posts ranging from "yes, they will
confiscate your radio" to "no, they wouldn't dare".

What's an illegal import? As far as I know, it's still
not illegal to own a cellular or cordless capable scanner,
(it's not kosher to listen, that's all). So, if it's
not illegal to own one in the US, why would it be confiscated
coming across the border? I'm not sure of this, but I though
there was a provision for bringing in non-FCC type accepted
devices for personal use, not retail sale. My knowledge
of the US import laws is just about nil though.

OK, sure, perhaps US customs might have the authority to confiscate a
non-FCC approved radio as it crosses into the US. But practically,
it's probably not worth their time and effort. What are they
gonna do, rip open every box labelled "radio" or "electronic
equipment" and turn it on and check it out? Do they have
a "banned radio brand name" check list? No, I think their
time is probably better spent looking for smuggled drugs,
guns, and explosives. Athough, I'm sure a box full of 500
cellular capable scanners from Canada might get their attention.
Not single units.

Remember, it's the people selling home security systems that
try to strike fear into your heart about the boogeymen gonna
break into your house, steal your stuff, and beat you up. Just
so they can sell more security systems even though you might
be just as safe without one.

So, I guess if I were in the business of selling scanners in the US,
or in the business of offering a service to convert them
to cell-capable, then I too would be trying to trump up the fear
that your radio might get confiscated if you try to send away
for one outside the US. No doubt, sending away for radios outside
the US sends US dollars with it. It's not our fault though. Most
scanning hobbyists just don't wanna be told what we can and
cannot listen to on the airwaves. You can thank the FCC, Congress,
and most of all, the cellular phone lobby for driving a noticeable
chunk of the scanner business outside the US.

Can anybody find some import law or FCC import verbiage that
says what US Customs can/cannot do in these cases? I have not
yet seen an authoritative answer, including this post.

setenv FLAME on

My own 2 cents. I have heard tell of devices used by the FCC
and intelligence agencies that can pick out the weak local oscillator
signal emitted by your scanner. Given that, and the intermediate
frequency of the first filter stage (usually 10.7 or 10.8 MHz),
they can easily derive what frequency you are listening to. They
probably only use this however if there are actively trying
to track the activity of someone they know is listening to cellphones
if for example they are stealing credit card numbers or
planning some sort of blackmail based on what they hear.

I suspect they don't go around randomly trying to see if they
can pick up voyeurs listening casually. They have better things
to do.

1952. Amtrak California Capitol Run Freqs.

Newsgroup: rec.radio.scanner
Date: 1995-05-05 00:00:00 UTC
From: maddox@west.darkside.com
Message-ID: <gk2m5c7w166w@west.darkside.com>
Source record: 257198

I have taken the Amtrak train to Sacramento from San Jose and notice the conductors all carry radios and the radios are always busy. Lots of talking going on there and I would like to be able to listen in. The antenas =LOOK= like they might be VHF. I'm guessing of course, but they look like VHF lengths anyhow.

What I'd like are the frequencies that these bad boys might be running on. Emailing them to here would be the best, but I'll check here as well.

I also have a question about batteries for my BC200XLT. I've been using the original battery for more than four years now and it is finally dying on me. Holds a very short charge. I'd like to know where I could get a good replacement. I know there are batteries that hold a much longer charge, I've read about them here anyhow, and would like to know where I could get myself a new battery at a good price. I found a place here called Scanners Unlimited in San Carlos that has a big battery that says it will last 15 hours for $75. They have factory refurbished original batteries for $30 but I don't like the thought of buying a refurbished battery for some reason. Anyhow, I'm local for something more or less local to San Jose, California or something mail order.

Thanks!

If all signals are relatively the same in strength, you would want to tune
the antenna to the lowest frequency since the higher ones come in better
no matter what length your whip is. On the other hand, if the 450 signal
is far away, the 150 is close and you have a strong paging signal at 158.7,
you would want to tune to the 440 band to maximize the weak signal and
minimize strong signals and overload.

All that battery is, is 5 (?)AA batteries with yellow plastic around it.
The Pos and Neg wires are soldered onto a battery and there is a piece of
thin metal connecting them in series. Instead of paying $45+ for a new
battery, take the old AA's out and go buy 5 more AA NiCads (~$15). Then
just put it back together. I've taken mine apart once before and it
looked pretty simple. Uniden wants $45 and they were back ordered 3 months.

1956. AR8000 Opinion

Newsgroup: rec.radio.scanner
Date: 1995-05-05 00:00:00 UTC
From: Chuck Hodell <hodell@umbc.edu>
Message-ID: <Pine.SGI.3.90.950505130835.1233A-100000@umbc7.umbc.edu>
Source record: 257202

I purchased a new AR8000 from a reputable dealer at the Dayton Hamvention and I have already returned the unit. It was a major disappointment to see how poorly the unit works. Just from the several days I used it I found the following problems:

- Audio was weak and distorted (only 150mw or so from the specs)
- Too much intermod and lack of selectivity for this class radio
- False s-meter readings (with no signal present)
- Spectrum display nearly useless (and it drops received audio every 5 secs)
- 118-136 Mhz sensitivity worse than a ten year old Bearcat
- Compromised performance below 30Mhz

Before anyone flames me, I will admit that I could have received a bad unit. However, I have read similar complaints from others on this newsgroup.

If you are thinking about buying an AR8000 I suggest that you purchase it from a reputable dealer (Universal, EEB, Grove, etc.) that will allow you to return it if you don't like it. I would also suggest that you try one in the store and enter several freqs you are interested in hearing and compare for yourself.

I am sure that there are many folks that are very happy with their 8ks and I hope that continues. But, $600 plus is a lot to spend on a radio and I want everyone to have at least several different opinions before they buy.

Bill,
I have one....it's a real workhorse. It's on all day, as I work from home.
It was made back when Bearcat wasn't owned by Uniden. Probably the best
one they ever made.
There's a pot. on the pcb that has to be tweaked, to make the auto setting
on the squelch work fine.Then, forget it. It has a clock, and 11 sets of
pre-programmed freqs in ROM. Only drawbacks are the 50-channel limit and
no cellular.
It has 45 buttons and two pots!
I also have a BC-850 and a BC-800 XLT. The 300 gets used the most.

Great audio power; I use an external speaker.

1958. AR8000 question...

Newsgroup: rec.radio.scanner
Date: 1995-05-05 00:00:00 UTC
From: sherman@lea.csc.ncsu.edu
Message-ID: <sherman.799699694@lea>
Source record: 257204

Can someone please help me clarify what the manual for the AR8000 says about powering the AR8000 and recharing batteries?

In many different places, the manual says many differeent things about the subject, but it dances around the questions I need answered. Unusual, since the rest of it seems pretty well written.

I used to own a PRO-32 (a good unit, for its day), and it had two sockets on the side for power. The top one powered the unit, and the bottom one powered the unit _and_ recharged the batteries.

The cool thing was that you could still use the unit while the batteries were charging, and this is what I wanted to do with the AR8000. But...

The AR8000 has only one socket. The manual says several things about it (all in different places, however).

o) You can use the socket to charge the batteries.
o) You can use the socket to power the unit.
o) Don't use the socket if you have non-rechargable batteries in it.
o) Never operate the unit while recharging batteries.
o) If you want to power the unit, use a _regulated_ power supply, 12V @ 300ma.

Ok. My questions are:

o) Why can't you use the unit and recharge the batteries at the same time? (Just like the PRO-32)
o) How can use attach a power supply to it without having to take the batteries out (since the manual says you can't do both)?
o) Why can't I use the "charger" (which is what the manual calls the power adapter that comes with the AR8000) as the "regulated" power supply? There has to be a power regulator inside the unit since the manual says that it can take from 5 to 15 volts.

The deal is that I don't want to have to open the unit every single day to remove the batteries just so I can plug it into the wall. After about 6 months, the battery cover would be shot.

Before I read the whole manual, I did hook up the "charger" and operated the unit at the same time (I was thinking PRO-32). It worked, but I believe the unit was getting kind of warm (I have charged the batteries several times since then just as the manual says, and it has never been that warm).

Just could have been because I had been holding it for about 15 minutes. I haven't repeated this experiment. I was going to ask the

net about it first...

A couple of ideas I had were the following:

o) Attach a switch to the side of the unit that disconnected the batteries
so that I could attach external power and operate the unit. But this
still does not allow me to charge _and_ operate the unit.

o) Don't use interal batteries unless I really had to. I would get an
external battery pack and connect it to the unit. Rarely do I go
anywhere were I couldn't take the battery pack too. This would save
wear on the battery cover.

The scanner is well designed in most respects, but they fell flat with
the power issue.

Does anyone have any suggestions???

Thanx!

1959. Re: Decoding Motorola's DVP

Newsgroup: rec.radio.scanner
Date: 1995-05-05 00:00:00 UTC
From: tahles@omnifest.uwm.edu
Message-ID: <3odqdi$fdt@omnifest.uwm.edu>
Source record: 257205

At this time there are no commercially available descramblers for these
radios that use spread spectrum and digital encryption. Basicly, as
a friend who is a Wisconsin Army National Guard radio operator/repairer
told me, if the NSA, CIA, etc. with their Cray computers wanted to break the
the code, it would take about a week of computing. I got to play around
with the Motorola SABER radios that use DSS, and they were amazing.
The only downfall of the SABER is that if the batteries go dead, the
power must be restored within 30 seconds or the computer set DSS code will
be lost.
The SABER radio using DSS will have a range of about 2-3 miles
in an urban environment. Without the DSS(ie. unscrambled mode) the range
extends to about 6 miles.
Another problem with DSS is that normal repeaters used by police,
etc. will not relay a DSS signal. There is not enough signal at center
freq. at one time because of the spred spectrum. On a normal scanner, the
received bandwidth is the same, and not enough of the signal goes through
to be understood.

Just a little more info for anyone who wants it.

>

It's not a quesiton of "scanner-proof" or not, it is a question of business economics and rate-of-return to our shareholders. Motorola currently does have a scanner that follows trunked conversations. It is a normal Motorola trunked subscriber radio.

The high cost of developing and bringing a new product to market would not be justified by the small number of units sold and the low selling price that would be required for a product in this market.

....Of course this is just one engineer's opinion and I am not the guy who makes these decisions....

The "lowspeed data" contains the talkgroup id or individual id that the subscriber must see to stay on the voice channel. If a subscriber gets sent to the wrong channel by the central controller, this will provide "misdirected radio protection" and bounce him back to the control channel. In addition, indication of activity on priority monitor talkgroups is provided so that a subscriber can know if he should leave the current call to listen to a priority call on a different channel. This is similar to, but not identical to DPL.

I have been told that there are at least two versions of Pro-46's. The later one has a microprocessor with about five multicolored wires coming out of it. This one requires a different mod than the more commonly used older model. I heard that cutting the brown wire might modify but that I'd better make sure. Apparently there was an article on this newsgroup awhile back that answered this question. Will someone please post it for me? Thanks much.

>
>I might add that I'd like to compare these with the PRO-62 and PRO-60.

I tested both the PRO-62 and BC3000XLT and liked them both. However,
the PRO62 and BC3000XLT are in different feature and price classes.
The BC3000XLT has much wider frequency coverage, more channels,
auto store, etc. Also, I've found the BC3000XLT has better intermod
immunity, much better audio, better display, and better keypad.

The PRO-62 can be powered by AA cells, but the BC3000XLT uses a
special NiCd pack (supplied).

For the PRO-62 review, see Monitoring Times, Feb 1995.
For the BC3000XLT review, see Monitoring Times, April 1995.

Sj> waves. What I can remember from high school physics and what I gather
Sj> from reading, is that it is the "height" of the wave. (hardly
Sj> scientific, I know :-))

Well, you get the general idea. The louder the signal, the greater the 'amplitude' or modulating of the wave. Hence, amplitude modulation.

Sj> What is a practical example of amplitudes effects? Do FM signals have

Couple of examples...on the AM radio band, if the modulation isn't controlled, signals can exceed the bandwidth on the frequency it is occupying. This can spread into other frequencies close to it. Citizens Band radio is a good example. Illegal users using high power linears would transmit on one frequency, but you could hear them spread across 2 or 3 adjacent channels up or down. Aircraft also uses AM signals.

Sj> amplitude? Does a 100 MHz signal have the same amplitude as a 400 Mhz
Sj> signal?
Sj> Is amplitude even relevant to communications?

FM uses Frequency Modulation. When a person is talking with an FM carrier, the frequency changes, rather than amplitude like in AM. Ideally, a 100 Mhz FM signal isn't any different than a 400 Mhz FM signal. So, FM has amplitude, but doesn't isn't used the same way as FM signals are.

I am going by memory, so I'm open to any corrections. There are lots of excellent books on the difference between AM and FM. FM is even more interesting with the scheme that enables SCA and Stereo and the upcoming digital data that are sent out to enable capable receivers to receive data coming form the radio station.

Motorola
>currently does have a scanner that follows trunked conversations. It is a
>normal Motorola trunked subscriber radio.

Let's stay in context, here. When we say "scanner" here on
rec.radio.scanner, it is generally accepted that we mean a
radio receiver that automatically samples multiple crystals
or memories and is marketed for the purpose of general
listening. A trunked subscriber radio does not meet the
accepted usage of "scanner" in this context any more than
my Mustek hand-held image scanner does.

So, I stand by my original statement. Motorola does NOT
market or have available a "scanner" for trunked systems,
nor are they likely to develop one.

Date: 1995-05-06 00:00:00 UTC
From: afdemt@aol.com
Message-ID: <3of4nd$b93@newsbf02.news.aol.com>
Source record: 257080

I am wanting to buy an Uniden 8100 scanner. I am only interested in a complete setup - radio and software. The radio should be working in all aspects. If you have such a radio and are wanting to part with it, then please get back to me via E-mail and we can go from there.

Thanks, Dave N6RHL

1988. LAPD switch to digital/trunked systems?

Newsgroup: rec.radio.scanner
Date: 1995-05-06 00:00:00 UTC
From: vector@inferno.com
Message-ID: <17794AQVBXVDDNJNHGT@inferno.com>
Source record: 257144

IH>Dick Dillman (ddillman@igc.apc.org) wrote:

IH>> So Les, are you saying that the LAPD remains on the same, non-trunked
IH>> frequencies but that digital encryption will be common on some channels?
IH>> Thanks,
IH>> Dick Dillman

IH>I heard the LAPD is going to digital, on some communications too, but
IH>I suspect it will be for two-way communications they want more
IH>secure. To go fully digital, or even some trunking, may be a bit
IH>difficult at present. If only because, other nearby agencies, and
IH>even other local police departments, do have needs to listen, and
IH>sometimes participate, in LAPD communications. For example, I did
IH>recently hear Cal State Northridge security, talking and participating
IH>with the LAPD with a police chase that started at the campus, on my
IH>scanner. I would assume, they would need continued access, and the
IH>logistics of this would have to be figured out first.

lapd has switched to using the motorola astro line of handhelds and
mobiles. the handhelds look similar to motorola saber III handhelds,
with a different two-line dot matrix type display and light blue
buttons. the mobiles, if i'm correct, are an upgrade of the motorola
spectras. all the units can turn on and off at will a digital
encryption technique they are using. not sure if it's des or dvp.
the current rumor is that they aren't able to use the encryption at all
the times they would like to due to many of the repeater systems not
being outfitted correctly for the digital scrambling. if a repeater
isn't outfitted with the proper filtering and voice processing
technology, the encryption control data passes through the repeater
distorted and is not decodeable by the units on the receiving end.

Startek is run by a former owner/partner of Optoelectronics. However, the
stuff they're selling seems to be of the technology that Optoelectronics
surpassed a long time ago.

It seems that some areas of Polica Call do have the new 800MHz freqs, but some of the cities have gone trunked recently, aren't included. Ill honestly tell ya something, a call to the police or fire department for a city can be a good thing. I got the freqs. for Coral Springs, Parkland, Cocnut Creek, Boca, and soon to get the freqs for Deerfield Beaches trunked system. If they tell you that they "arent allowed to tell you" then tell 'em thats bull shit. Pompano Beach with held thier information telling me how its "classified". I was quite pissed off. Godd luck!

Source record: 257152

Does any one at this sight know what frequencies the MSP is still using in the 42mhz low band system? Also does any one know when the rest of this state(MA) will be covered by an expanded Former Metro Police 800mhz trunked system which is currently used by former MDC stations and patrol cars and many special divisions? I know that some cars and stations have both radios, like Troop H and part of troop A; since the recent troop realignments in eastern Mass. has put some troops with split coverage. I enjoy this sight and want to save space for others so I would appreciate e-mail response: rubinomi@cleo.bc.edu. Thanks!

I monitor the local office of the PA Attorney General on these frequencies as they do their investigations, primarily of narcotics offenders. I'm sure that if you don't have a local office that uses them continually, activity on these channels would indicate that an investigation is occurring in your area. With luck you may even hear a narcotics raid!

From: sevnrays@aol.com
Message-ID: <3ohe4h$pko@newsbf02.news.aol.com>
Source record: 257165

I have a Pro 2030 besides my Pro 62. I modified the 2030 to receive cell calls. The easiest mod you can imagine. Open the case and snip one wire and you're all set. The 2030 is not a top of the line radio but is very good for a beginner or someone that would like a very good scanner for a great price. I got mine at Radio Shack on sale for $159 (reg. $199).

It has 80 channels and scans at a blazing 50 channels per second.

A good buy. I'm happy with mine.

2010. Re: *Any Recomendations For RS Scanners???*

From: sevnrays@aol.com
Message-ID: <3ohe62$pln@newsbf02.news.aol.com>
Source record: 257166

I have the Pro 2030 and handheld Pro 62. I like them both alot.

The 2030 was bought for $159 on sale and I modified it for cell calls with a super simple process. It only has 80 channels but scans really fast at 50 channels a second. Great for trunked systems. A decent inexpensive radio.

I love my Pro 62. 200 channels, triple conversion (makes for excellent reception) scans at 25, searches at 50. Only drawback is the speaker. Kind of muddy when turned up loud. I bought that one on sale for $219 (reg $299).

Hope this helps.

For those of you looking for unblocked continuous coverage scanners, I wanted to share this information with you.

I shopped around for some time, got prices from England and all over Canada, and found that the best place for U.S. customers is Durham Radio in Canada.

Originally, I got their number from someone else on the net. They are very helpful and have great prices- especially in comparison to Atlantic SCAM Radio.

Shop around, but check with Durham Radio last... they'll give you the best price.

Also, why buy from across the Atlantic and merry old England? Buying from our neighbor to the north means saving money on shipping and easier accessibility if (God forbid) something goes wrong with your scanner.

When you call, ask for Keith. He's the owner and VERY helpful and eager to please. Tell him that Monty sent you...

DURHAM RADIO
350 Wentworth Street East, Unit 7
Oshawa, Ontario L1H7R7

PHONE: 905-436-2100 Ask for Keith

P.S.- I am in NO WAY connected to this store in the least. I just happen to be a satisfied customer sharing info with others on the net...

I have two desktop scanners a pro-2030 and pro-2006. The pro-2030
has cheaper circuitry, such as double-conversion, and less band
coverage than more expensive scanners, but still isn't a bad
unit. But as far as the mod, the newer pro-2030's don't have
that diode you can cut to restore the whole 800 mhz band, only
one's manufactured, I think, before last April.

The Radio Shack PRO-2036 and Uniden/Bearcat BC890XLT are the
same scanners dressed in different paint schemes. The other
difference is the squelch control works in the opposite directions.
The Radio Shack user manual is better and more thorough than the
Uniden manual.

The tuning knob and optional CTCSS decoder are good features but
the global rescan delay is a throwback to scanners of 10 years ago.
They cover 220 MHz but the step size is wrong for 222 MHz ham repeaters.
Also, they support only AM detection in the military air band so
so they are not suitable for NBFM or WBFM (mux) milsat reception.

Both units I tested had many birdies, and lots of intermod and
images. Detailed reviews are scheduled to appear in June 1995
Monitoring Times magazine.

> I believe that, in general, no license is needed for transmitters < 100 mW.
> This applies to all frequencies with no special exceptions or additional requirements at the higher frequencies.

Here's what the FCC has to say about that. But I don't know of a way to convert between mW and their unit of measure, microVolt/meters at 3 meters. This is from section 15.122 of that FCC thing.

Fundamental (MHz) Field Strength (microVolt/meters at 3 meters)
40.66 to 40.70 1000
70 to 130 500
130 to 174 500 - 1500*
174 to 260 1500
260 to 470 1500 - 5000*
470 and above 5000

*linear interpolation

But what does this mean in mW?

2028. PRO 43...RADIO SHACK FOR SALE...GOOD PRICE

Newsgroup: rec.radio.scanner
Date: 1995-05-07 00:00:00 UTC
From: myway@ix.netcom.com
Message-ID: <3oi5uh$prj@ixnews4.ix.netcom.com>
Source record: 257090

I HAVE A MODIFIABLE PRO 43... FOR SALE.

I HAVE THE DIRECTIONS AS TO HOW TO DO IT AND THE
owners booklet which came with it ...

the scanner has seen about thirty hours use....
It was always carried with me in my photo vest at
news events and it stayed inside .. i used a lapel
mic from radio shack to listen to it as cops do with
their radios...

the inside number is 2a3 and the serial number begins
with 038...

again, it's fully modifiable by user following the
directions on the piece I have for it....

the price: $175 plus $10 shipping... that means it will
go out ups 2nd day or 3rd day air....

the unit was always kept inside my jeep when not in
use or in my office... no one else used it and it has
never been dropped. the clip is on and the rubbie
duckie antennae is working well....

it's a real good unit.. it gets some locations that my
roof antennae for my base units don't get all the time.
strange...

it's 200 channels... ten banks... uses 6 nicad aaa's.

bill conduit
bay cities video group
408 13th St. ste. 229
Oakland Calif 94612

I can fax the modification sheet to you if you want just to
get your info to you asap... or see how easy it is to do.
get back to me by "e" and reserve your scanner now....

again. $175 plus $10 postage and handling... no haggling.
this is the rock bottom price and that is the reality of this post.

just let me know by "e" and we will get together on the shipping
to you....

i just don't use it... simple. that is it...

Hi pete

I could not find a search feature on your web page. There was a long unformated list or index. The folks at QRZ cd-rom have a callsign look up search and they have lots of amateur radio files and programs to down load.

Please provide a service to this amateur community. QRZ does not advertize here....every one links to them on the web! There is room to compete with out filling every radio news group with pointers to your off shore order form. Is it a secure server for credit card info?

Is it safe to use a transistorized VHF-AM radio on a plane to listen to aircraft comms? I'm thinking of using my Realistic Jetstream on a flight.

BTW the sensitivity sucks.

2031. Is there any hope?

Newsgroup: rec.radio.scanner
Date: 1995-05-07 00:00:00 UTC
From: atarax@news.eznet.net
Message-ID: <3oih2p$8rt@roch3.eznet.net>
Source record: 257093

Hello. Some time back, I bought a Radio Shack Pro-23. Is there any hope for modding this? It is labelled 800MHz on the front, but it doesn't get the important parts. (only 806-824, 851-869, 896.1125-956 in 800MHz). Here is the information I could figure out from it.

Looking at the sticker on the back:
MODEL NO.:20-504
SCANNING RECEIVER PRO-23
FCC ID: AAO20-504
FREQ. RANGE: 108-136.975, 137-174, 406-512, 806-823.9375, 851-868.9375, 896.1125-956 MHz
There is a small (1.2x0.5cm) sticker on the back which says "2 A 4".

Looking inside:
There is a circuit board with two small circuit boards mounted on top. They have labels on the large board: One is labelled "800MHz UNIT" and the other is labelled "PLL UNIT". The two boards look like this:

800MHz unit:
A sparsely populated board. It is copyright 1992 Uniden, and it has some codes on it. "PH-140AB" with a box around it, a large arrow pointing up that says "DIP".

PLL unit:
Markings: It is a Uniden part. "PH-129AC" with a box around it. There is a lot of stuff on here.

Main board:
Lots of little parts all over. Marked "PH-163BA 1/2" with box. There are three diodes standing upright on the right edge, below the middle.

Underneath the main board is a metal plate. Removing this leads to another board. There is a large IC in the middle labelled "uniden UC1599A L4818C10H 3M1". The board is Copyright 1993 uniden. The box says "PH-163BA 2/2". There is another large arrow with "DIP" inside it, pointing to the top of the scanner.

That's about it, after this I'm at the front of the case.

From: dpfg@ukc.ac.uk
Message-ID: <7377@rook.ukc.ac.uk>
Source record: 257094

How effective would an outdoor base aerial be with this sort of radio?

Some books suggest that overload, intermod and other nasties would occur. This is in the context of a fairly rural location, within a few miles of a largish town. Not that many pagers to be seen.

The aim would be to generally boost VHF, and drag in a few mobiles in the 440MHz sort of area.

BEW>>: Kris - it is a violation of federal laws to listen to cellular
BEW>>: telephone transmissions.
BEW>>: ---

BEW>>That's not what Kris asked. Save the moralistic legalism for for your
BEW>>"friends and family", not a legit question on the net.

BEW>I dont know where people are getting their facts. There must be some
BEW>seriously misinformed people in the world. Why would it be illegal to
BEW>receive
BEW>a signal that someone else is transmitting. If you have the legal means to
BEW>receive it, i.e. a scanner and a published listing, then what law are you
BEW>violating?????? Show it to me if you can....

Well, it could be that the cellular phone companies saw a glitch in
their sales because people could listen in, so instead of investing in
scrambling technology, they invested in lobbying congress to pass a law
forbidding listening. Then they threw some more money at congress and got
them to pass a law outlawing sales of scanners that could receive
cellular or be modified to receive cellular and also to outlaw to
cordless phones. There ya go.

BEW>Anyone wants a list can ask me for it, its a small band with a simple
BEW>subdivision to it. Ask me, woody1@teleport.com

Then why didn't you go ahead and post 'em? (825-850 and 870-895). The
easy way to find out is look at the label on the scanner and see what's
ranges they skip.

Steve: In my opinion, the SWL on the AR8000 is a compromise at best and doesn't even come close to a $100 class SW only radio. It certainly isn't even close to the Realistic DX380 I recently sold.

Remember that there is no sync on the 8k and the audio quality is marginal. If you are going to listen to USB/LSB transmissions, even the 8k manual says that performance is compromised because of the lack of an adequate filter.

If you are only going to listen to SW, save yourself some money and get a Grundig Yacht Boy 400 or similar rig at less than $200.

I am wanting to upgrade my scanner collection but am at an impasse. I am looking for recommendations on whether I should snap up one of the remaining 2006's (if it is possible) or go with the new 2035. I have read some reviews on the 2035 and it does not sound like it is up to the same snuff and the 2006. In addition does anyone know if optoelectronics is going to continue to support new additions and upgrades for the 2006. Apparently the 2035 board from optoelectronis will have additional plug in boards for trunking, pager decoding and such. Is such a mod or upgrade planned for the 2006's boards? Also what do you think about the Uniden 9000. Is it worthy? Is it better than the 2035?

Let me hear your opinions before I buy....

Just "traded up" to the 2035 a couple of days ago, and I love it.
Bought a 2039 about a week ago and had trouble with strong signals
overloading the receiver. That was only using an outside antenna. The
small whip gave no problems.

By the way...the 2035 is on sale until 6/1.

Hope this helps,

Just traded the 2039 in for a 2035. Had it about a week and had all of
the problems you mentioned. I do live in a "high traffic" area (pagers
etc.) and the outside antenna was the problem. In a rural setting, you
should be ok.
The 2035 works like a champ. Better receiver and an attenuator switch
make things a lot better.

I would like to make a simple dipole antenna for
my scanner to pick up cordless phones (46MHz).
Any suggestions would be appreciated. I've got a pretty good idea how to
make one, I just need some advice on element length and placement.

thanks

Charles St. Onge

BC-200XLT 4sale. Comes complete with charger, original case, rubber duck and about 70 days left on the warranty. Please e-mail me directly if interested. The unit is in excellent condition. Sells for 224.00 at scanner world, will sell for $160.00 shipped COD to you. The unit also has the battery mod and cell mods done. The battery mod was done by Uniden.

George
P.S. will also trade for non-modifiable pro-43(need military aviation coverage) or for a Icom 2SAT or Radio Shack 2 meter HT.

IV> You stated....

IV>-> If a newsgathering operation can obtain a letter of consent from an
IV>-> agency that is on an 800 trunked system they can get a compliant
IV>-> radio system. Very expensive, but permitted if consent is given.

IV> If the system in question is on a trunked system, really all you
IV>would need to know is the PL tone frequency that is usually in Hz. Then

<snip>

that approach will seldom work with the vast majority of trunking systems in use. a ctcss tone doesn't save the world, and ctcss does NOT single out the services you want on most trunking systems. if i was to try that approach for ANY of the trunking systems here in the san francisco bay area, i'd more than likely become quite frustrated with the outcome.

in most cases, the group / fleet selection for a trunking system is done with the data signals sent and received by the radios in the system, NOT by PL tone. subaudible tones in trunking systems are more often than not used simply to prevent unwanted interference.

I am interested in buying a scanner that has great frequency range (500kHz - 1300MHz) with very few gaps and more than 200 channels for about $300. I have seen a lot of great deals in the past in this newsgroup and wish I had acted sooner. Does anyone have a scanner that fits this criteria that they'd like to part with? I'd even compromise the frequency range to 25 - 1300MHz if it had some great features. E-Mail please.

Hi Mark,

Not to sure about this, but I've been updating the page recently
and I get the same if I try to access with five minutes of sending
the data. Try again, I havn't updated it for about 8 hours so it
should be OK now.

Perhaps you were just unlucky accessing just as i'd updated
the page...

Please let me know if it isn't, It's ok from my end when I log on
the server is located in the U.S.

2057. New MOD (via the keys) for the Pro-2030

Newsgroup: rec.radio.scanner
Date: 1995-05-07 00:00:00 UTC
From: salinas@uslink.net
Message-ID: <salinas.6.0011CE3C@uslink.net>
Source record: 257119

** Scanning and Storing of 66 to 88 Mhz **

I was looking for a software approach to get the cellular
frequencies back on the PRO-2030. (Later Model) I did find
a way to get the foreign frequencies. I don't know if it
will work on earlier models, but it doesn't hurt to try

**** WARNING ****
THIS TIP WILL CLEAR THE MEMORY!

1: Turn off scanner.
2: Hold the 2, 9, and L/O Keys. While holding them, push
the Power button.
3: Manually go to channel 14. The channel should read 66.450 Mhz.
4: Turn the volume down and unsquelch the radio.
5: Use the down key to bring the frequency to 66 Mhz.
6: Press the MON key.
7: Press the MAN key.
8: Type the channel were you want to store the freq. and hit PGM.
9: Press the MON key.
10: Then press the ENTER key.

The reason for storing it is because once the scan goes below 66 or
above 88 it will lockout that range. Once you have this stored, you
can scan it and store any active frequencies without error showing.

Have fun,
Chris

>TTFN

>-Steven

I don't think that is true. It's against the law to make them in the US
but not to posses them... Like any vehicle manufactured in the US can not
have a Speedometer that goes over 85MPh but in Canada there is no
restriction thus
the vehicles GM and other manufactures build in Canada have Spedometers
that register over 85 but are sold in the US...

Pretty Much the same there...

The bearcat 210, although not the latest in design, does have a reasonable receiver which does not intercept much of the interference which is found on the new "broadband" (30-900 mhz) units. The scanner does however have tendency to loose its memory with small glitches in its power source.

You can use you CB antenna if you dont want to hear much above 30 mhz since a CB antenna is tuned to receive at 27 mhz.....best to go get a mobile scanner antenna!

Your trying to make Oranges into Apples!....What you ask is not a reasonable thing to do....go shopping. Cellular pohnes were desinged to operate on over 600 fullduplex 800 mhz frequencies which are solely licensed for "Cellular" use. they are alos dependant upon hearing directives on the control channel from the Cellular switch. No directions....No communications....a lot like the new trunked (SMR) systems.

How about revenue as an explanation. Our local cops run radar on the
bottom of hills to catch people coming down off hills, naturally exceeding
the speed limit.

After our experiences, I wouldn't be too sure. Our company bought a 1992(1?) Ford F350 while we were on project in Nevada. Upon Its return, (to Canada) we had a major hassle just to get it home as it had no Daytime Running Lights, speed was in MPH, and there was no labeling en francais. Just last year, we crossed the border in the same truck and had to really struggle to get back home. I'm travelling to Michigan this June and I now have no intentions of bringing my 'customized' scanner with me. I just don't need the hassle. I've been ripped off twice with my '46. The first time they got my sales slip (and my expen$e receipts, tools etc...). The secon time they got my scanner. Two months later, RCMP recovered it and sent it home. Three time unlucky.

: >
: > If it's on the air, you're a fool to think it's safe.
: > (All the same, if it's online, you're a fool to think it's safe as well..)

: Well, that depends on what type of encryption you have. SOme of the new
: phones (Escort) have a pretty decent encryption and Digital Spread
: Spectrum, enough to keep almost everyone except the NSA off you back.
: As for online security check out PGP. It uses MD5 and IDEA encryption
: algorythms. It's so good the Govt has tried to block it's export and jail
: the author. About as secure as you're going to get and much more secure
: than the weakest link---the Human.

I have to comment. For those of you that would really sit around and try
to decode your neighbors cordless. You would be sick, see a doctor, take
the pills, and relax.

I am also glad that someone talked about PGP. It seems to be the only
thing that works. It works on the pain-in-the-butt theory. It simply
takes too long to decode. It can be done if you have a year or two to
play with it. By that time the drug dealer that was using it is more
than likly dead.

I feel that some system admin's are sick. They sit around and read users
mail and posts for no other reason than to read it. Like this covert
thing is going to do any good.

If I where some of you that are among the sick, I would not be so public
about my covert scanner activities. Leagal questions have nothing to do
with what I am talking about. Some people get so offended when they find
out that someone has been receiving their phone calls, they may resort to
assalt. Remember, you are not the only sick people out there, and you
could end up dead in the wrong "hood". All I am saying is be carefull.

: - Audio was weak and distorted (only 150mw or so from the specs)
Audio in mine is just fine here.

: - Too much intermod and lack of selectivity for this class radio
Intermod is fine here as wellNOT IMMUNE but does a fine job handling
intermod. I live in RF infested LOS ANGELES by downtown so it speaks for
itself. IT does QUITE well handling INTERMOD.

: - False s-meter readings (with no signal present)
: - Spectrum display nearly useless (and it drops received audio every 5 secs)
: - 118-136 Mhz sensitivity worse than a ten year o

Are you using the original rubber duck ? Then theres your problem on poor
sensitivity. The rat shack telescope antenna will do wonders to the signal.

: - Compromised performance below 30Mhz

Performance is decent with a good antenna.Need a hot receive .. then a
dedicated shortwave receiver is the better choice.

: Before anyone flames me, I will admit that I could have received a bad
: unit. However, I have read similar complaints from others on this
: newsgroup.

: If you are thinking about buying an AR8000 I suggest that you purchase it
: from a reputable dealer (Universal, EEB, Grove, etc.) that will allow you
: to return it if you don't like it. I would also suggest that you try one
: in the store and enter several freqs you are interested in hearing and
: compare for yourself.

Use a better rubber duck when trying it out.
:
: I am sure that there are many folks that are very happy with their 8ks
: and I hope that continues. But, $600 plus is a lot to spend on a radio
: and I want everyone to have at least several different opinions before
: they buy.

I am quite satisfied with my AR8000 and I use it MORE than my PRO2006

Well... While we are at it. Bare in mind, that the use of such devices violates the law in multiple ways. For one thing, it is illegal to transmit without a license. Even if you are a ham, and indeed the device is tuned to the ham X band which is different from radar X band it is still illegal because you aren't identifying. Further, it could easily be seen as deliberate and malicious interference. The device itself is probably not licensed, as it has few legal applications.

> I suppose that they slam on their brakes as well if the door
>opener device someplace, or other radar freq. source triggers their
>fuzzbusters. By Brian's reasoning, then EVERY SINGLE RF source in that
>frequency band is similarly responsible for causing accidents.
Nope... I do not use a radar detector, but I have been in a vehicle with one. If you have a good one, on the highway, there are very few false alarms which are real strong. Besides... This brings us back to the point above. It doesn't matter. Such a device is not licensed, therefore any emissions it makes are illegal, and deliberate interference. A garage door opener is not illegal, nor is it deliberate. Hence, according to the FCC, it is much worse.

> Brian - *drivers* are generally responsible for accidents,
>barring simple mechanical failures. If some people weren't spending so
>much time trying to figure out ways to speed (and thus LESS time

>they wouldn't have to worry about it.
I don't know what type of car you drive, but I drive a mid-80s

Honda, and I can get above the speed limit very easily. All I have
to do is push down the gas pedal, and yeah, it doesn't have great pull
below 60, but then it starts picking up steam as it works itself into the
powerband. It can pull 90 without breaking a sweat. Really, I figured that
out without too much effort, just a lead foot. Yes, driver's are responsible
for their actions. However... In Maryland for example, if you run into
a car, and a passanger in the other car is injured, and wasn't wearing your
seatbelt. Your liability is drastically reduced. Why? Because the other
person was doing something extremely stupid. It's the law to wear your
seatbelt. It's the law for a reason, your chances of surviving an accident
are much higher. If someone screws up, why should they be held accountable
if someone else gets hurt because of their own stupidity, when it didn't
have to occur.

What's the point? The point is, if you do something to contribute
to someone's accident (especially break the law) you are just as much,
if not more, at fault, regardless of what he was doing.

> People who *slam* on their brakes to avoid being caught breaking
>the law should probably be removed from the road as hazards, eh Jeff?

Gee, back to what I said before. You are suggesting that its not
okay to speed, but its perfectly ok to contribute to accidents while doing
something blatantly illegal. Last time I checked speeding isn't as illegal
as violating numerous FCC laws and contributing to a potential acciddent,
especially if it is fatal.

The only way to legally jam X-band radar would be if you have
a ham license. However, it's not that simple. You would have to rig up
an AM transciever on amateur X band (which is a few MHz off from police
radar), and hope you have enough power and they have weak enough filters
that you overload the front end of their radar guns. Given that you can't
aim it, and it is unlikely you will ever get a direct head-on shot, I would
recommend transmitting 500mW-1W. Police radar is 100mW. As long as your rig
is tightly filtered and only transmitting on amateur bands, and you follow
proper operating procedure (no music, no profanity, identify yourself, etc)
this is actually legal. Remember, amateur radio operators are licensed to up
to 1.5KW on microwave frequencies. Any problems that the radar gun are
experiencing are caused by an overloaded front end and are not legally your
fault. It's very similar to when you drive by a pager tower and you have
a wideband 2-meter radio, your radio will get wiped out. There is nothing
illegal about this (although they are probably transmitting 2M intermod,
whic kind of is illegal, but if it has the legally mandated 60dB loss, it
is legal).

>Subject: AR8000, SCOUT, APS-105, Optoscan

Jeff:

I purchased a Opto CX12AR AND a Scout 3.1, which supports Reaction Tuning
with the AOR AR8000 or 2700. The Reaction Tuning works GREAT!!

I haven't worked too much with the CX12AR. There is a FFC adapter which
is supplied with the CX12AR interface. Two female stereo jacks are
on the end of the FFC adapter. One provides Squelch Status and the other
Transmit, Receive, and Ground to the CX12AR interface. In order for the
CX12AR to be switched into FULL duplex mode (as opposed to Half, ICOM
CI-V mode), an internal switched must be toggled.

In Full duplex mode, software like Scan*Star and ScanCat should work
just fine.

Be very careful here, remember that the *receiver* is the load
and the antenna is the source during reception. A mismatch at
the antenna won't put VSWR on the transmission line. Only a
mismatch at the load (receiver) can do that.

I bought mine what they were about $30. I found it to be a cheap
antenna and most likely a similar TV antenna mounted vertically would
do just as well. However, it did work quite well for DF'ing signals
and adding a good amount of gain to weak signals. I wasn't
disapointed with it.

Another cheap addition if you have a long coax run is the mast-mount
pre-amp. I used the Rad Shak one with the built-in balun. I ran that
into an R7000.

>beam. I live just west of Washington, DC --- one evening not long after

>O'Hare in Chicago!! That was not everyday reception, but it does give
>you an idea of how good the scanner beam is. Incidently, mine's hooked
>up to an ICOM R-7000. Hope this info is of use. Bill

I happened to hear a real weak 46 MHZ phone signal at a time when I
lived more or less in the woods in New Hampshire (this was also before
tuning these frequencies was made illegal). There were two neighbors,
about a 1/4 mile each way up the street. I rotated the scanner-beam
around and it didn't seem to be one of these. The direction it
pointed to was right into the woods where there wasn't even any roads
for miles. What's more was the hills in that direction.

I peaked up the beam and got out a topo map of the area. Exactly on
that heading was a gap in the hills for a little stream and the gap
to a new neighborhood about 4 miles away! I was impressed.

So, if you want a directional antenna the Scanner Beam does what it
claims to. How it compares with a TV antenna or the (Mirage?) LP
antenna of better quality and about $200 I can't say.

Date: 1995-05-08 00:00:00 UTC
From: ibrown@riipsdev.waterloo.attgis.com
Message-ID: <D89sr5.49J@attwat.Waterloo.ATTGIS.COM>
Source record: 257040

I have a Realistic PRO-43 for sale.

Details:

Frequency Coverage:
30-54 MHz
118-136.975 MHz
137-174 MHz
220-225 MHz
225.0125-400 MHz
400.0125-512 MHz
806-823.9375 MHz
851-999.9875 MHz - Full Cellular Coverage

Other:
200 Non-volatile programmable channels
10 Banks of 20 channels and 10 monitor channels

Includes:
110 V AC adapter
12 VDC Car Lighter adapter
6 Nicad batteries
Instruction Manual
Original Box

This radio is 18 months old and in excellent condition, but has become surplus to my needs. I have performed all PRO-43 modifications. I am asking $300 Canadian or $210 US for this radio and will ship the radio anywhere in North America for this price.

If you are interested please reply:

>1500W, could be more fun than I thought. Any one have any info on this stuff?

Hi, Brian. FCC regulations limit power in the amateur service depending on your class of license and the frequency being used. As I recall, for VHF and above (50 MHz and up), Technician class licenses and above are limited to 1500 watts PEP maximum. Yes, that's a lot of power, and if one doesn't know what they're doing, yeah, they can cause some damage. There *are* other things to keep in mind. One is that communications are limited to the minimum power necessary to carry on communications, so it's neither legal nor practical to run a kilowatt to your local FM repeater, but that's exactly how some stations run EME (earth-moon-earth) or moonbounce stations ... run legal-limit power into very large antenna arrays, and bounce sigs off the moon.

Also, there are certain geographical areas where some frequencies in the amateur bands, particularly the 420-450 MHz region, have power limitations due to proximity to military installations. These are documented in Part 97, the FCC rules governing amateur radio.

Also remember that at most frequencies above 400 MHz, the amateur service has secondary privileges, which means "...must accept interference from and must not cause interference to" primary users. Also remember that 900 MHz is pretty close to the microwave range. In fact, again going from memory, the frequency used by microwave ovens is between 2 and 3 GHz (2000 to 3000 MHz), only a factor of 3 or 4 above the 900 MHz band, and you know what a few hundred watts there does to things.

To answer your initial question, yes, it can done legally.

Having a ham license doesn't give you "jamming" privileges.
Offhand, I think the ham band is from 10.000 to 10.500 GHz,
where police X band is 10.525 GHz.

>However, it's not that simple. You would have to rig up an AM
>transciever on amateur X band (which is a few MHz off from police

It is very simple. You only need to modulate a low power transmitter.
This is often done by simply switching the DC voltage feeding a Gunn
diode. The transmitting signal is modulated at the frequency
of the "believed" Doppler shift (about 30 Hz for every MPH). That is,
the radar receiver is deceived in thinking the the detected signal is
the mix of the tranmitted and Doppler-shifted reflected signals.

What tones / freqs does the RS weatherradios look for from the NWS to sound an alert?

While the salesperson is distracted in the store, rub one of the buttons
of the floor model about 200 times. I'm half-kidding. My keypad is
still in reasonably good shape after 3 months and programming 530
channels manually. Others noticed the fading in only a week of use.
I just consider myself lucky I guess.

Mike

The 2700 has the HF band and Computer interface, but RF performance is
reported to be marginal. Unless you really need HF or computer interface, go
for the 3000XLT.

My "excuse" is a NHTSA study that found that the vast majority of speed limits nationwide were *deliberately* set 10 to 15 mph below the measured 85th percentile speed -- which is to say, they're deliberately set much too low.

We're talking about the most trivial sort of civil law here -- regulations that were set for no good reason. There are no moral issues involved in breaking such. If you ask me, the people who should be asked to come up with the explanations are the ones who deliberately set the speed limits way below what the drivers were observed to be doing.

How about safety? Just because inconsiderate maggots go flying down my sidestreet at 40mph, does that mean the speed limit should be 40, or even 35? I like it where it is, at 25. I'd like to see it lowered to 20; kids play on this block. Kids don't always pay attention, and it's easier to stop from 20 than 40. There are cases where the speed limit has to be slower than people want to go. If you have to speed, leave earlier.

Well, I say, that if someone is driving so recklessly that they kill themselves by braking to avoid what they thought was a possible radar trap, then good riddance to 'em. What if it WAS a real radar trap that caused this response? People who aren't speeding won't be bothered by this device.

I'm not saying that I agree that people should be using these. I have no argument with people that drive steadily at 10-15 miles over the 55 limit on the highway, hell, I do it myself. It's the maggots that weave from lane to lane, or even on the shoulder, all while doing 80 or above, that should be shot on sight.

Ron:

Welcome to Los Angeles !!!

Despite some popular rhetoric, I think you will find plenty of exciting monitoring in the Southern California metro area.

My first suggestion is:

Obtain a copy of the special SOUTHERN CALIFORNIA EDITION of Gene Hughes' "POLICE CALL". Many radio hobby, electronic and Ham Radio stores can assist you in obtaining this popular publication, which should not be confused with the immensely popular regional (CA/OR/WA) version.

Secondly:

Join the Southern CA Chapter of RCMA and attend one of their monthly dinner meetings. All are welcome!

The Los Angeles CITY Fire Department maintains 24 voice radio frequencies in a conventional analog format in the 800 MHz bandwidth. Here is a listing of our most active frequencies:

CH 4 Metro EMS Dispatch (S of Mulholland) 857.9375

CH 7 Metro FIRE Dispatch (S of Mulholland) 859.4375

CH 8 Valley FIRE & EMS Dispatch (N of Mulholland) 858.4375

CH 11 Command
860.7625

CH 12 Tactical
858.2375

CH 17 Tactical
857.7625

These are our most popular and active....but there are many others. I hope to have them soon listed on our WWW Home Page. For a "virtual visit" to our Dispatch center logon at:

http://www.ci.la.ca.us/department/LAFD/index.html

We welcome your PUBLIC comments here.

Happy Monitoring!

Brian Humphrey
Public Information Officer

Los Angeles City Fire Department

W> Pretty Much the same there...

W> William F. Church

Whoops, Bill, a few corrections may be in order.
It's no longer required for motor vehicles in the U.S. to have speedos limited to 85 MPH.
As for scanners, it's illegal to manufacture in the U.S., or *IMPORT INTO* the U.S., scanners that can tune to cell freqs, or be easily modified to do so. Going to Canada, buying such a scanner, and bringing it into the U.S. is importing.
I know, it's sort of nitpicking, but the difference remains. Customs, if they catch you, can indeed confiscate the scanner.

I agree, reasonable fines might help to get the point across, $500 tickets
will simply piss people off.

> If the state was concerned about our safety then why is it that a
> poseession of a controlled substance only carries a $250 fine and
> speeding STARTS at $325. The whole point of Oregons draconian fine system
> is to make money plain and simple.

Well, storing a joint in your glove compartment won't exactly impair your
ability to drive the car, nor will a six pack in the trunk. So, possesion of
drugs and violating traffic regualtions are two separate issues.
FWIW, I'd consider both fines to be highly unfair and I don't quite see point
in this comparison. Please note that driving under the influence is of course
another issue, but you simply can't jump to conclusions simply because of
drug/alcohol being in the car.

> Well flashing your high beams (briefly, not continuous) is a signal to
> the driver in front that you would like to pass. It's legal, and it's in
> the drivers manual.

Now that's a surprise to me. It's absolutely forbidden in Germany and
considered not only bad pratice. You can get fined real hard if someone goes
to court with such a matter. A friend of mine had to pay $1500 in court fines
because he repeatedly flashed a car in front of him.

> If someone is in back of you and you see lights flash MOVE OVER if it is safe
> to do so.

That obviously depends on local customs. I would say that using your left
turn-signal is a friendlier way, but then again that is what I was taught.

> If the person behind you is being an
> asshole tailgaiting you with his/her brights on the you should also move
> over. If the guy in back is pissed off he may decide to do something
> stupid just to get around you, so, avoid a dangerous situation and let
> the car pass. Yes the dude was an asshole and should pulled over but not
> letting him pass will only make things worse.

If something would tailgait me real bad and I'd consider that guy to be a
real danger to other drivers on the road, I wouldn't hesitate and make a
quick cell-call to inform the police. I did it before when I almost got hit
by a drunk driver doing 160km/h on the Autobahn, so those jerks better watch
out.

If both the road conditions and traffic permit such speeds, why not.

I'll agree with that one. But why is it that the police run radar on
major highways and thruways and not in residential areas??? Heres the answer:
$$
$$
You got it Big fat green MONEY! If the police and municipalities were
really interested in safety then they would run radar in the
neighborhoods. But, after awhile there wouldn't be anyone to catch so
they run it on highways where they know 85%+ will be speeding. Hey! Maybe
if we had a decent NMSL we'd get somewhere with time to spare! The time
we'd save could be used to drive the speed limit in town and relax. The
cops could care less about the piss ant 25 MPH zones. Why do you think
they GIVE radar guns to neighborhood watch groups?? Because they know it
isn't going to make them money if they put a few traffic officers on
Maple St. People know they can get away with speeding on residential
streets a lot easier than on the freeway. No it isn't right to think that
way but it's a fact.

Sounds like a lawsuit waiting to happen. "I was driving around a wet
corner and officer Bob was using instant on. He knew my reaction would be
to hit the brakes. He and the city/state should have know this would
cause an accident."

Think it won't happen?? It will. That or they'll claim the officer caused
them to spill their McDonalds coffee on their leg. 3rd degrees burns and
all. $6 million just waiting for someone.

Thats different from speeding, thats reckless driving. 85 in a 55 cool.
85 in a 55 while in the shoulder, you're an idiot. And with the vast # of
cell phones, cop bait.

You can obtain crystals from just about any Radio Shack store.
Otherwise, they use the "standard" crystal formula used by many other
scanners on the market (Regency, etc). Only Bearcat used a different
formula. Just for grins, the formula is crystal freq * 3 + 10.7 (IF) =
Operating frequency. You'll find the scanner will do an excellent job at
monitoring both the amateur 2 meter and 440 MHz bands.

Hi Bill
We just back from Florida and I did pick up a copy of PC. There were quite a few of the 800 systems updated but over in Broward County they seem to be playing some kind of ping-pong game with the allocations and frequency use. It's a bit hellish especially for those guys who want to monitor the locals.You just have to waste so much damn time looking again for all of the channels and then reprogramming them in,
Of course the two areas I wanted, FtL and Pompano Beach/Margate are the one's who just moved again. But I did get some help from a couple of good monitors in the area. One is really into fed and I will keep close contact with him.
This trunking in a real pain in the but. Now to monitor the action of the guards on the beach at Pompano I have to program in some 29 inputs but it works.

Also just picked up a Scout. Interestingl;itle piece of equipment.

The legislator would disagree with you. Increasing revenue is a GREAT excuse for setting the limit 10 to 15 under. How can you make any money if everyone drives the speed limit?? You can't. So you lower until 85% of the people don't drive the limit. Plenty of pockets to pick!

2116. Re: Frequencies in Vancou

Newsgroup: rec.radio.scanner

For those of you wondering what all the fuss about Scantrix is, take a look at the following frequencies in a message posted by David Wood. David is the author of the Scantrix compilation of frequencies mostly stolen from other books.

Dk> From: dkwood@idirect.com (david wood)
Dk> Subject: Re: Frequencies in Vancouver Area

Dk> Police Victoria City Police CLEU 862.9665 (Truncked)

I really hate people that pick on spelling mistakes but as an author of a scanner directory, David should at least know how to spell trunked. 862.9665 isn't even a proper allocation. A proper allocation would be 862.9500, 862.9625 or 862.9750.

Dk> Police Saanich Municipal Police 861.0500 (Truncked)
Dk> Police Saanich Municipal Police 861.0550 (Truncked)
Dk> Police Saanich Municipal Police 861.0600 (Truncked)
Dk> Police Saanich Municipal Police 861.0650 (Truncked)
Dk> Police Saanich Municipal Police 861.0700 (Truncked)
Dk> Police Saanich Municipal Police 861.0750 (Truncked)
Dk> Police Saanich Municipal Police 861.0800 (Truncked)
Dk> Police Saanich Municipal Police 861.0850 (Truncked)
Dk> Police Saanich Municipal Police 861.0900 (Truncked)
Dk> Police Saanich Municipal Police 861.0950 (Truncked)
Dk> Police Saanich Municipal Police 861.1000 (Truncked)

Nice trunking system!!! 11 frequencies spaced 5khz apart? Guess David doesn't realize that the standard spacing on the 800mhz trunking band is 12.5khz not 5khz. Assuming that this is a trunking system, how many systems do you know of that could handle 5khz spacing.

Think everything is co-sited? I'd love to see the duplexers that could handle this spacing.

I'd guess the Saanich Municipal Police department has a frequency around 861.0750 and somebody can't tune his radio properly.

This is typical of the stuff found in Scantrix. A police department with 2 frequencies 5khz apart. I think someone has not quite got the tuning right yet.

In David's defence, it looks like he's quoted someone elses message but why would he quote a message without adding anything of his own? Maybe it's like Scantrix, a compilation of other lists?

Steve

VH> If the system in question is on a trunked system, really all you
VH> would need to know is the PL tone frequency that is usually in Hz. Then
VH> you would enter that frequency into your tone board (if your scanner is
VH> equipped with a tone board, that is). Having entered that PL tone, you
VH> would be able to monitor the service(s) you require without having to
VH> monitor the other services or have to get any letter of consent or
VH> purchase a compliant radio system.

Vaughn, don't forget that trunked systems usually don't run any sort of
CTCSS tone. They don't need it. Unlike a traditional RCC where many
people share one frequency, the trunked system has many frequencies.
Keeping users from hearing each other is the job of the computer.
It keeps your radio quiet until a call comes in for you. Then it assigns
you an unused frequency. To follow a trunked conversation you need a
compatible radio programmed properly. Getting a compatible radio is the
easy part (although not cheap). Getting the radio to follow a specific
user could be easy or hard depending on who you know :).

The fun will start with the Toronto area fire departments going trunked.
They'll probably share the system with the municipal government. Won't be
fun trying to follow calls with the dog catcher etc on the system. Most
media people will have to pay the price for a programmed radio. They
usually know the right person to ask.

> --Dave Voelker
> dvoelker@netins.net

Dave,

For a little more than a year, scanners have been legal in Germany.
There are a few exceptions though. First of all, your scanner has
to have a "Post" sticker, equivalent to an FCC sticker on the back
of your scanner. Then your scanner has to be able to receive some
part of the radio broadcasting spectrum, i.e. FM or AM. And another
thing is that listening to airplanes, police etc... is still "sort of"
illegal.
I know this sounds very strict, but if you are careful you won't get
into trouble. When you travel, keep the scanner in your suitcase
without batteries and erase the frequencies. (I forgot to mention
that it IS legal to own any sort of radio here, as long as you don't
use it or it looks like it will be used.) I'm sure you won't get
into trouble then. I have carried my little IC-R1 all over the place
in my carry on with charged batteries, and I was never asked a
question. Also use common sense and don't listen to your scanner
in front of policemen and the like...
I don't know the rules in England and Holland concerning scanners.
Enjoy your trip,

Jan

Picked this up from the EFF newsgroup:

This is an article from the Denver metropolitan area's "Westword" newspaper for the week of April 19-25, 1995. It's reminiscent of the Steve Jackson case, but this guy's equipment was seized because he listened to unencrypted police radio transmissions.

This is posted without permission in hopes of generating some interest among local cybernauts, particularly since Denver's mayoral race is now underway.

==========

BUGGING THE POLICE
A Federal Heights Man Tunes Into The Cops, Turns On His Fancy Radios And Gets Busted

by Arthur Hodges

David Triska has been fooling around with radios for more than four decades, ever since he got an old-fashioned crystal set when he was nine years old. Now, though, the King Soopers truck driver's lifelong hobby has landed him in hot water with the Denver Police Department, which says he may have crossed the line between radio buff and wiretapper.

Last month police raided Triska's home in Federal Heights and seized a number of radios, cables and other electronic equipment, claiming that Triska had "infiltrated" the communications system Denver police officers use to talk with dispatchers and one another. Triska has not yet been charged with any crime, but court documents and interviews with police made it clear the department believes he violated felony eavesdropping laws.

Triska, who insists that listening to police communications is completely legal, is furious. He's hired an attorney to get his equipment back and has fired off outraged letters of complaint to a slew of officials, including Mayor Wellington Webb, Governor Roy Romer and U.S. Senator Hank Brown.

"They're the gestapo of Colorado," Triska, 51, says of the Denver police. "They want complete control over who listens to their radio systems."

Police say they are still investigating Triska, so they can't discuss details of the case. But they hint that he isn't quite the victimized hobbyist he makes himself out to be. According to a search-warrant affidavit, for instance, Triska told an undercover police officer that he illegally installed cable-television hookups

for friends so they wouldn't have to pay cable fees to TCI.

"He's not Mr. Innocent," says Denver police detective Richard Mumford.

Still, a spokesman for the Federal Communications Commission says that, in general, listening to unscrambled police transmissions is permitted under federal law. And the owner of a local radio-equipment company familiar with Triska's case says the city may have a difficult time showing Triska has committed a criminal act.

"They're going to be hard-pressed to prove anything in court," says Richard Merkle of STI Mobile Communications Inc. "I've got a sneaking feeling that before it's over, the city's going to drop the whole thing."

To understand the case, it helps to know something about police radio communications.

Until fairly recently, most police and fire departments used conventional radio systems, which were easy for members of the public to eavesdrop on with inexpensive scanners from Radio Shack and other electronics stores.

Under the old system, a police department the size of Denver's might have fifteen different communications frequencies. Each patrol precinct would get a channel on which all transmissions within that precinct would occur. Those who wanted to listen in simply had to tune their radio to that channel's frequency - and they'd hear everything that was going on.

The problem with such systems was that they were very inefficient. A heavily used channel in a high-crime precinct might become overwhelmed with traffic, while other channels in other areas sat silent and unused.

In recent years, therefore, many cities have converted to "trunked" radio systems, under which a whole range of frequencies is available to all precincts all the time. When a patrolman picks up the radio in his car to speak to another officer ten blocks away, a computer assigns the transmission to whatever frequency is available. The same thing happens for the reply, which may come back to the patrolman on a different frequency altogether.

"It's a more efficient use of the spectrum," says Sandy Lugger of Ericsson Inc., the company that manufactures Denver's trunked system.

Trunked systems are a bane to scanner enthusiasts, however. A two-minute dialogue between two officers might bounce across a dozen different frequencies, making it extremely difficult to follow. Diehard eavesdroppers, therefore, have had to graduate from scanners to more sophisticated "trunked radios," which can be

programmed to track individual conversations as they flit across the airwaves.

But such programming into a police department's so-called "talk groups" is no easy matter: It's necessary to have special, highly expensive software normally available only to police or other owners of the trunked system in question.

The Denver Police Department installed its Ericsson trunked system in 1990. At the time, the department agreed to make fifteen talk groups available to tow companies, news agencies and any other owners of trunked radios who wanted to monitor communications. In the interest of security, however, it withheld certain "covert" talk groups - such as those used by narcotics detectives - to ensure the integrity of investigations wasn't compromised.

David Triska's sin was that he was able to figure out how to program in all the department's talk groups, including those the police had decided were off-limits. Triska said it wasn't hard - most of the equipment he needed he ordered through the mail from Ericsson. He won't say how he got his hands on the software, but he says that, too, was a pretty simple feat.

"It was just obtained; I can't give you the individual's name," Triska says, adding, "I'm not the only one out here with software. It's all over."

Triska says he had no evil intentions. He just likes to keep tabs on what's happening on the streets of the city. "Whatever was out there, I wanted to listen to," Triska says. "Because it's not against the law."

The Colorado wiretapping law does specifically allow monitoring of all police radio communications that are "readily accessible to the general public." It is illegal to intercept "scrambled" transmissions, but any talk that isn't encrypted is fair game for eavesdroppers, the law says.

The same holds true under federal law, says Chris Haskell, a spokesman in the FCC's Denver office. "Unscrambled stuff can be listened to, as far as we're concerned," Haskell says.

The question, Denver authorities say, is whether Triska violated the state's "readily accessible" rule. Deputy District Attorney Lamar Simms, while declining to comment specifically on the case, notes that it takes "extraordinary" steps to be able to listen to Denver's covert talk groups.

"There are people that would love to have these channels," Simms says. "The point is, they're not supposed to."

Triska, though, points out that it's possible to hear any individual police transmission - even one from a covert talk group

- with a conventional scanner; it's just the complete conversations that are difficult to follow. In his book, that means that all police talk must be considered "readily accessible" and that taking additional steps to track conversations - like programming a trunked radio yourself - is entirely within the law.

After getting a tip, Denver police began investigating Triska in February. According to the search-warrant affidavit, Detective Mumford posed as the owner of a towing company, called Triska and asked him if he would program a trunked radio so it carried all of Denver's talk groups. Triska told Mumford he could have it done for a $600 fee.

"At one time during the conversation, Triska talked about illegally hooking up cable TV in Denver and bypassing the TCI cable system for people that he know so they wouldn't have to pay for service," the affidavit says.

Police searched Triska's mobile home on Federal Boulevard on March 9, walking away with several radios, monitors, notebooks and other equipment.

Triska, who denies he ever did cable hookups for anyone, now fears he may be charged with wiretapping, a Class 6 felony. He blames his plight on Larry Fenstemaker, head of the Denver Police Department's Electronic Engineering Bureau. Fenstemaker, who Triska says is know as "the Fuhrer" by local radio buffs, is carrying out a "personal vendetta" against him, Triska says.

Fenstemaker declines to discuss the case. "I'm not allowed to comment about it," he says.

Triska has vowed to sue the police if they don't return his equipment. He says the fact that he hasn't been charged with a crime yet - more than a month after the search - is an indication that authorities know they're on shaky legal ground in the case.

"If they've got so much on me, how come I haven't been arrested?" Triska says. "It's harassment for the word go. There's no two ways about it."

This is new experience for me. I'm sitting here listening to the scanner (BC 8500 XLT) when a couple of the Indiana State Police low band frequencies come alive. Nothing too unusual you say...well maybe not, but these are frequencies that have all but been abandoned.

The signal is perfect - better than the local PD 5 miles away. I listen closely and don't recognize any unit identifiers or locations. The dispatchers voice is VERY southern. I hear a reference to a location "just South of Terry on 55". I also hear traffic for "C" and "J" units. No clue where these are from. Next I hear the dispatcher give a DL return that lists a Jackson address and a previous traffic citation from Hattiesburg PD.

Now I'm thinking about this and scouring the atlas...Boom! There it is. I'm hearing the Mississippi Highway Patrol.

The time of the intercept is 1815 - 1845 CST. The two frequencies I monitored were 42.12 MHz and 42.16 MHz. My monitoring post is in Terre Haute, Indiana -
approximately 650 miles away. I am using an Antenna Specialist MON-58 multi-band antenna mounted at about 12 feet.

I've heard of skip before, but I've never experienced it quite like this.

I just saw this in another newsgroup. Has any one heard of this? And, more importantly, WHERES THE FTP SITE FOR THIS STUFF!!!!

Supposedly this article ran last month in a Colorado paper.

BUGGING THE POLICE
A Federal Heights Man Tunes Into The Cops, Turns On His Fancy Radios And Gets Busted

by Arthur Hodges

David Triska has been fooling around with radios for more than four decades, ever since he got an old-fashioned crystal set when he was nine years old. Now, though, the King Soopers truck driver's lifelong hobby has landed him in hot water with the Denver Police Department, which says he may have crossed the line between radio buff and wiretapper.

Last month police raided Triska's home in Federal Heights and seized a number of radios, cables and other electronic equipment, claiming that Triska had "infiltrated" the communications system Denver police officers use to talk with dispatchers and one another. Triska has not yet been charged with any crime, but court documents and interviews with police made it clear the department believes he violated felony eavesdropping laws.

Triska, who insists that listening to police communications is completely legal, is furious. He's hired an attorney to get his equipment back and has fired off outraged letters of complaint to a slew of officials, including Mayor Wellington Webb, Governor Roy Romer and U.S. Senator Hank Brown.

"They're the gestapo of Colorado," Triska, 51, says of the Denver police. "They want complete control over who listens to their radio systems."

Police say they are still investigating Triska, so they can't discuss details of the case. But they hint that he isn't quite the victimized hobbyist he makes himself out to be. According to a search-warrant affidavit, for instance, Triska told an undercover police officer that he illegally installed cable-television hookups for friends so they wouldn't have to pay cable fees to TCI.

"He's not Mr. Innocent," says Denver police detective Richard Mumford.

Still, a spokesman for the Federal Communications Commission says that, in general, listening to unscrambled police transmissions is permitted under federal law. And the owner of a local radio-equipment company familiar with Triska's case says the city may have a difficult time showing Triska has committed a criminal act.

"They're going to be hard-pressed to prove anything in court," says Richard Merkle of STI Mobile Communications Inc. "I've got a sneaking feeling that before it's over, the city's going to drop the whole thing."

To understand the case, it helps to know something about police radio communications.

Until fairly recently, most police and fire departments used conventional radio systems, which were easy for members of the public to eavesdrop on with inexpensive scanners from Radio Shack and other electronics stores.

Under the old system, a police department the size of Denver's might have fifteen different communications frequencies. Each patrol precinct would get a channel on which all transmissions within that precinct would occur. Those who wanted to listen in simply had to tune their radio to that channel's frequency - and they'd hear everything that was going on.

The problem with such systems was that they were very inefficient. A heavily used channel in a high-crime precinct might become overwhelmed with traffic, while other channels in other areas sat silent and unused.

In recent years, therefore, many cities have converted to "trunked" radio systems, under which a whole range of frequencies is available to all precincts all the time. When a patrolman picks up the radio in his car to speak to another officer ten blocks away, a computer assigns the transmission to whatever frequency is available. The same thing happens for the reply, which may come back to the patrolman on a different frequency altogether.

"It's a more efficient use of the spectrum," says Sandy Lugger of Ericsson Inc., the company that manufactures Denver's trunked system.

Trunked systems are a bane to scanner enthusiasts, however. A two-minute dialogue between two officers might bounce across a dozen different frequencies, making it extremely difficult to follow. Diehard eavesdroppers, therefore, have had to graduate from scanners to more sophisticated "trunked radios," which can be programmed to track individual conversations as they flit across the airwaves.

But such programming into a police department's so-called "talk groups" is no easy matter: It's necessary to have special, highly expensive software normally available only to police or other

owners of the trunked system in question.

The Denver Police Department installed its Ericsson trunked system in 1990. At the time, the department agreed to make fifteen talk groups available to tow companies, news agencies and any other owners of trunked radios who wanted to monitor communications. In the interest of security, however, it withheld certain "covert" talk groups - such as those used by narcotics detectives - to ensure the integrity of investigations wasn't compromised.

David Triska's sin was that he was able to figure out how to program in all the department's talk groups, including those the police had decided were off-limits. Triska said it wasn't hard - most of the equipment he needed he ordered through the mail from Ericsson. He won't say how he got his hands on the software, but he says that, too, was a pretty simple feat.

"It was just obtained; I can't give you the individual's name," Triska says, adding, "I'm not the only one out here with software. It's all over."

Triska says he had no evil intentions. He just likes to keep tabs on what's happening on the streets of the city. "Whatever was out there, I wanted to listen to," Triska says. "Because it's not against the law."

The Colorado wiretapping law does specifically allow monitoring of all police radio communications that are "readily accessible to the general public." It is illegal to intercept "scrambled" transmissions, but any talk that isn't encrypted is fair game for eavesdroppers, the law says.

The same holds true under federal law, says Chris Haskell, a spokesman in the FCC's Denver office. "Unscrambled stuff can be listened to, as far as we're concerned," Haskell says.

The question, Denver authorities say, is whether Triska violated the state's "readily accessible" rule. Deputy District Attorney Lamar Simms, while declining to comment specifically on the case, notes that it takes "extraordinary" steps to be able to listen to Denver's covert talk groups.

"There are people that would love to have these channels," Simms says. "The point is, they're not supposed to."

Triska, though, points out that it's possible to hear any individual police transmission - even one from a covert talk group - with a conventional scanner; it's just the complete conversations that are difficult to follow. In his book, that means that all police talk must be considered "readily accessible" and that taking additional steps to track conversations - like programming a trunked radio yourself - is entirely within the law.

After getting a tip, Denver police began investigating Triska in February. According to the search-warrant affidavit, Detective Mumford posed as the owner of a towing company, called Triska and asked him if he would program a trunked radio so it carried all of Denver's talk groups. Triska told Mumford he could have it done for a $600 fee.

"At one time during the conversation, Triska talked about illegally hooking up cable TV in Denver and bypassing the TCI cable system for people that he know so they wouldn't have to pay for service," the affidavit says.

Police searched Triska's mobile home on Federal Boulevard on March 9, walking away with several radios, monitors, notebooks and other equipment.

Triska, who denies he ever did cable hookups for anyone, now fears he may be charged with wiretapping, a Class 6 felony. He blames his plight on Larry Fenstemaker, head of the Denver Police Department's Electronic Engineering Bureau. Fenstemaker, who Triska says is know as "the Fuhrer" by local radio buffs, is carrying out a "personal vendetta" against him, Triska says.

Fenstemaker declines to discuss the case. "I'm not allowed to comment about it," he says.

Triska has vowed to sue the police if they don't return his equipment. He says the fact that he hasn't been charged with a crime yet - more than a month after the search - is an indication that authorities know they're on shaky legal ground in the case.

"If they've got so much on me, how come I haven't been arrested?" Triska says. "It's harassment for the word go. There's no two ways about it."

2128. Need Frequencys in AZ

Newsgroup: rec.radio.scanner
Date: 1995-05-09 00:00:00 UTC
From: zepplin@ix.netcom.com
Message-ID: <3oos5o$9co@ixnews3.ix.netcom.com>
Source record: 256935

I need some help. Does anyone have a list of frequencys for the Phoenix or just all of Arizona area? If you do, please email it to me. These frequencys will be used for my scanner, i dunno what other ones there are, but i am just clarifying that.
Thanks

>Hey Monty, where is Durham in relation to Toronto?

I have no idea... I have never even been to Canada. But I shopped around and know that they have the best prices and great service. The owner is very nice, eager to please, etc.

> I am from western NY,
>and am considering driving to Canada to buy an AR8000 or similar radio.
>Does Durham import their radios from the US, or do they get them directly
>from the manufacturers in Japan, etc? (I mean, do the radios have open or
>unblockable cell bands?)

No they do NOT get them from the U.S... That's the beauty of these radios- they come from the maunfacturer in their original design- UNBLOCKED.
As for the AR 8000, you know that there is an AR 8000 UK for England. I do not think that the Canadian models carry the "UK" but it is exactly the same. Unblocked cell bands are the advantage to buying from Canada or Europe.

> Thanks for the address, does Durham have a
>catalog that they could mail me?

Yeah they have a catalog. Call Keith and ask for one... He also sells ham radio equipment, if that's your thing.

"Re: Scanners OK in Europe?":

d> In Germany they are forbidden

No, since 1.1.1994 scanners are allowed to use, if they cover at least
one legal radio band. Most scanners cover 88-108 MHz FM, voila!
Many of the newer ones wear a label by the BAPT (minstery of telecommunication)
which marks that they are legal.

Yup, that's skip. Very common on police low band during the summer months.
Lucky you could ID the sender. Here in New York I used to get the same type
of thing (our local dept was on 39.38, they have since moved to uhf).

Good listening

2132. uniden BC2500 schematics??

2133. Pro-43 Case

Newsgroup: rec.radio.scanner
Date: 1995-05-09 00:00:00 UTC
From: clint.bradford@woodybbs.com
Message-ID: <93.7271.7592.0NFBA29A@woodybbs.com>

Subject: Pro-43 Case

>>I am looking for a case for my PRO-43. Can anyone suggest a good case
>>and the place to get it.

Here's the one I bought - it is a great case, and it's never been
removed since I got it!

FROM: Howard Bornstein
Design EQ
P.O. Box 1245
Menlo Park, CA 94025

I now have limited supplies of custom-designed, hand-made
leather cases for the Radio Shack PRO-39, PRO-43, and
PRO-44 handheld scanners.

The case is handmade out of fine, black, Corinthian leather
(ok, I'm kidding about the Corinthian part) and fits snugly
on the PRO-39/43/44. The case has cutouts for the display,
the keyboard, and the power ports. It also has sound
holes over the speaker.

The scanner slips into the case without having to put the
belt clip through a slot. The case is designed to stay on
the scanner all the time, so, to that end, there is a
velcroed flap at the bottom that allows you to open the
battery compartment and change the batteries without ever
having to take the case off. There are also slots in the
back of the case if you want to loop your belt through it
for greater security.

With a little "training" the scanner in the case will stand up
on end without any problem.

The cost of the case is $29.95 plus $2.00 S&H. If you're in
California, you'll need to add $2.47 state sales tax (sorry).
Since the cases are handmade, it may take as long as 3-4 weeks
from receipt of your check or money order. I will try to speed
this up as much as I can. The cases are sent out via airmail
and satisfaction is guaranteed.

To order, send a check or money order to:

Howard Bornstein
Design EQ
P.O. Box 1245

Menlo Park, CA 94025

You can reach me by phone at 415-328-9181 afternoons PST or via CompuServe Email (ID:76174,637.) If you are ordering from outside the US, please drop me email, because the postage will be a bit more. Feel free to contact me if you have other questions about the case, and thanks very much for your interest.

Regards,
Howard

No. No. No. No.

All elements of a receiving or transmitting system are set up with a characteristic impedence. In this case it is 50 Ohms. Any variation in the impedence outside of a pure resistance will cause mismatch. Any mismatch defeats the lossless transfer of energy. VSWR is a measure of a device's impedence variation from pure resistance.

Antenna mismatch is STILL important as it must transfer the recieved radio frequency energy into the 50 Ohm coaxial cable transmission line. Calling a transmitter or a reciever a "load" or a "source" only labels the direction of RF transmission. However, you can have a full-duplex case where you transmit AND recieve simultaneously into the same antenna.

Gary, how would you handle that case? How can the antenna be a "source" and a "load" at the same time? You cannot completely ignore the antenna VSWR! You may have to live within a reasonable range as is the case with a wideband discone or log-periodic yagi but antenna mismatch is very important for a receive-only system.

When hobbiests start paying more attention to building a good receiving system they will realize that they can pull in more weak signals. Many people live with poor antenna setups because their scanners may overload easily. Better scanners are the answer, filters and attenuators are passable band-aids for the units we bought and have to live with. The wide frequency coverage of scanners makes the use of narrow filters useful only for scanning a narrow range of frequencies. However, using

good antennas, low-loss cable and good connectors will do wonders for your monitoring hobby.

If the NSA wanted to know what you were saying on the phone, it easier
for them to arrange a phone tap than it would be to decode the DES that
many cordless phones use. The NSA doesn't care what encyption your
cordless phone is using. My point was, if your phone has DES or spread
spectrum you are safe from the casual snoop. If you enimies in high
places, they would probably just tap your line; in wich case, you would
need more help than any encryption on a cordless phone could provide.

LET'S GET SOMETHING STRAIGHT HERE...THEY AREN'T ILLEGAL!
The radar "Zapper" like the one sold by Transel, manufactured by
Rainbow is NOT ILLEGAL. As a matter of fact it has FCC APPROVAL.
Cut the crap about licences, emissions etc. You DON'T know what
you're talking about. They DO NOT cause interference to anything.
I'm sick of seeing this silly argument concerning FCC rules etc.
Thanks fellas,
Matt - WA2TPX (a proud owner of a "zapper"...having a blast)

>>brand counters that sell for $400. Is the Opto a better counter?

>Just thought I would point out that Optoelectronics also has a model
>in the $150 range. ($139, in fact, according to the price sheet I
>picked up at Dayton.) I suspect that comparing Startek's low-end
>model to Opto's high-end model is like comparing apples and oranges...

I thought it was the other way around but I can't verify it. I do know
that I have an Opto 2810 I am very happy with. I added an extra battery
pack and it will go about 8 hours before it dies. One quirk it has is
that the low battery indicator flashes after about 1 hour (always did
this) but it really keeps on working another 7 hours. After that, it
doesn't lock onto freqs although it is still displaying random numbers.

>You can obtain crystals from just about any Radio Shack store.
>Otherwise, they use the "standard" crystal formula used by many other
>scanners on the market (Regency, etc). Only Bearcat used a different
>formula.

Although the *formula* may be the same, most crystals which work ok
in Radio Shack scanners will oscillate on a different frequency when
placed in a Sonar brand scanner.

From the FAQ:

Although they used a 10.7 MHz first IF, Sonar radios
require parallel resonant crystals different from the
common series resonant crystals used in Regency and Radio
Shack scanners. Some Radio Shack crystals will work in
Sonar units, but more often they oscillate a few kHz off
frequency and are unsuitable unless changes are made to the
oscillator circuitry....

A young women was pulled over for a lane change without signaling. The officer noticed a car slam on its brakes to avoid her. She thought it was a bullshit ticket and remarked "Why aren't you out looking for criminals?" His reply was "I am, and you're one of them."

The zapper is simply a power trip. Those that use it have very little self-esteem. They are so fucked up mentally that they will do anything to see your detector LED illuminate.

The only reason why the FCC has anything to do with us is because
everything we do affects interstate commerce. Can't you see that
everytime you use the zapper commerce among the states is affected?

2150. A question and an offer

Newsgroup: rec.radio.scanner
Date: 1995-05-09 00:00:00 UTC
From: c570074@showme.missouri.edu
Message-ID: <c570074.89.2FAF9147@showme.missouri.edu>
Source record: 256993

First, the question:
On alt.radio.scanner, I saw a post referring to a mod that can be done to provide 30-960Mhz uninterrupted coverage on a Radio Shack scanner (Pro-39, I think). That seems too good to be true, and I'm a bit skeptical of this claim. Nonetheless, I'm interested. The post made reference to Nutz and Voltz, which apparently had some sort of instructions on how to do it. The question is this: Is this possible, and if so, how do I obtain this information (i.e. where do I get Nutz and Voltz? Is it an electronic publication or a newsstand thing?) There was another, cellular related question that referred to information from the same source, so I'm interested in any information about the publication/magazine/whatever. Thanks.

Now, the offer:
Speaking of cellular, I've got a copy of a fairly sizable Motorola cellular phone programming/command guide. Before I get yelled at, I realize that this is not the most appropriate forum (as opposed to a cellular-oriented newsgroup) for such information. However, since a lot of people that screw around with scanners like to screw around with a number of communication/electronic devices (oh, say, like cellular phones), I figured that I would be hitting the target audience anyway. But I have it, and I'd be happy to send the information to a public FTP site. I'd post it, but it's pretty large (100k or so zipped - rough, rough estimate) and I've had bad luck with uuencode and multiple postings for a single file. I'll be happy to distribute it, but I'd rather not have to mail a copy to every last person that replies. FTP would be much simpler. So, if anyone is interested and can provide a site for me to send it to, I'll be happy to do it. If not, or if I shouldn't be providing such information here, then forget it.

Oh, and people who feel the need to go faster than everyone around them are
not on a power trip? They're in effect saying that they're more important
than others. and that they don't have to obey the same laws. I'm referring
to the assholes that weave from lane to lane, passing on the shoulder, or
driving significantly faster than the rest of the traffic.

To those people, I say, FUCK YOU. I hope you die in a fiery wreck. And when
I pass your wreck, I'll just laugh.

AOR (UK) say they have mentioned this to Japan but its gone
no further than that. No changes in the actual keypad print.

Other radios, the MVT-7100 as an example have similar moulded keypad
which do not appear to have had this problem - if they have onwers have
made no comment.

I should think the problem is increased if you "press" the keys with a
"sliding" motion rather than a direct "push", together with users
variations in skin "ruffness" and "chemical content". Perhaps particular
types of soap that maybe used have some effect on the print aswell ?

It is generally accepted that vinyl cases which have the clear plastic
covering over the keypad solve this type of problem. If you're going
to spend $600 to $700 on a radio, why not invest in the case? My Yupi
MVT7100 is in its case and I haven't had a problem yet....not even a
scratch!

Can't help much with the parts, but FYI...

I recently took my Pro-34 into Radio Shack to get the (cracked) LCD fixed; they did replace it, so there must be parts around somewhere. The invoice listed the LCD itself as costing around $12, not counting labor. It works OK now, and they didn't undo the 800 Mhz mod. You might consider it if you can't find the part.

2158. ICOM 2GAT used as a scanner, need help!

2159. BC3000 on A/C Power - How Long?

Newsgroup: rec.radio.scanner
Date: 1995-05-09 00:00:00 UTC
From: richard@larry.wyvern.com
Message-ID: <richard.800044953@larry>
Source record: 257002

The manual for the BC300xlt says that the battery charges in 14 to 16 hours. How long can I leave the scanner connected to the charger after the 16 hours? Can I run the scanner at home while connected to the charger for long periods of time?

I called the 800 number for Uniden to ask this question about running the scanner on the charger at home for long periods of time. The person to whom I talked said something like, "Oh, lots of people try to cheat and avoid buying a second scanner for use at home. Running the BC3000xlt for long periods at home on the charger will burn up the circuits. Well, it won't exactly burn up the circuits but little pieces of dust get inside the unit. They will get baked by continuous operation on the charger and cause electrical problems in the circuits."

So, is there any way to safely run the BC300xlt off of A/C power for extended periods of time?

P.S. Does the unit recharge while using the auto adapter?

Richard

This program is capable of post processing DTMF tones
and decoding the numbers from a given input sound file. The
sound file can be recorded using DTMF for Windows or
recorded externally. One application where DTMF tones are
used is in the standard American telephone dialing system.
The standard DTMF tones represent the numbers
1,2,3,4,5,6,7,8,9,0,*,# on a standard keypad interface.

If interested please email me for free demo of above program....

From what I understand when trunking all the freqs are used by all the
agencies using that trunk system. That is the idea behind it. More
people on the same system without the tie-ups. The way it works is like
when someone keys up, it goes to the open channel and transmits there.

From: jbrooker@falcon.ic.net
Message-ID: <3ommn6$sp5@condor.ic.net>
Source record: 257012

I've been reading some of the posts on the failure of the EDCO interface for the AR8000 (both of which I have) but haven't paid much attention because my cable was working fine. Until today when the thing failed.

Even more amazing is they want the thing back in its original packing with the receipt to repair it !! They want to check all the components ??

Seems to me the failure of the darn thing was inevitable since there was no restraint for the cable inside the connector.

What other options are there to connect the AR8000 to the computer? (To get up and running quickly)

Thanks

2176. 1500W for 900MHz HAM's?

Newsgroup: rec.radio.scanner
Date: 1995-05-09 00:00:00 UTC
From: lou@gary.com
Message-ID: <7849-318787901@gary.com>
Source record: 257019

IB>I know this should be in the HAM section but I don't know much of
IB>anything about HAMming. I talked to some guy and he said if you get a
IB>tech license you're allowed to experiment in the 900 MHz HAM band with up
IB>to 1500 Watts! I this true? 1500 Watts seems like an awful lot of power up
IB>in that area. Sheesh, I could make a short/med range Air Search Radar
IB>with that kind of power. I think I'll finally try for my HAM license.
IB>1500W, could be more fun than I thought. Any one have any info on this stuff

You'll be lucky to find equipment that will produce 15 watts in that
freq range much less 1500. But yes, with a Tech License anything above
50 MHz, you are permitted to use upto 1500 watts. Please refer to Part
97 for more details. Hams don't use quite that much power above 50 MHz.
The most is usually about 150 watts give or take. There is a law that
states you~ must carry on the desired communications with only the
amount of power necessary. This helps to prevent interference to others
and other services.

The most probable reason that that kind of power would be used aboce 50
MHz, would be for Moon Bounce (EME) or Meteor Trail type work.
Don't take everything you hear for granted. Some people tend to create
fish stories especially when they don't know all of the specifics
themselves.

If you need more advice, E-Mail me and I'll be glad to help.
Lou

One thing I do that works perfectly is to have two scanners programmed with different channels each. One of the systems (can't remember if it is GE or Moto) goes to each channel in ascending order so it is easy to program each ascending channel into a different scanner. One is busy beeping while I hear the response on the other one. For systems that jump to other channels in an unpredictable manner, this method won't work so well.

Well the Pro -39 is supposed to lose memory after a few hours but I sent mine to the shop and when I got it back about a month later (without batteries of course) it still had all the freqs I programmed into it before I shipped it out. Apparently it will hold onto memory for a lot longer than the manual says it will.

2179. Re: AR8000 EDCO Interface

Newsgroup: rec.radio.scanner
Date: 1995-05-09 00:00:00 UTC
From: daryll1@aol.com
Message-ID: <3ooos1$827@newsbf02.news.aol.com>
Source record: 257022

Jim...

Yep, the EDCO interface is a piece of junk. Works fine, but it sure is flimsy, and I'm keeping my fingers crossed that mine works the next time I need it.

OptoElectronics is supposed to have an interface available soon, but I don't know much about it. If it is as good as their other stuff, it'll be better than the EDCO one. AOR makes one, but you have to deal out of the USA to get it.

Anyone know of any other computer interfaces for the AR8000?

.........Daryll

-> What tones / freqs does the RS weatherradios look for from the NWS to sound
-> an alert?
->
-> -- -- Dave Stuart
-> dstuart@umr.edu

Hi Dave....

The radios listen to either 162.4, 162.475, or 162.55. These are the
PRIMARY NOAA freqs....If you don't hear anything on these try.....
162.425, 162.450, 162.525, or 162.50. THese carry continous broadcast of
weather all year...The alert tone is 1050Hz.....I hope this helps....

Rich Barron says:

" Home built devices can be tested by the builder and measured to fall
" within FCC rules part 15 and still be legal if they are built in
" quantities less than 5 and test measurements are available for inspection
" - as per 15.133

[snip]

" Please give me some FCC rule numbers that show these devices to be illegal
" to operate. The above is the closest I've gotten and it tends to show that
" they are legal within some guidelines. Alternale interpritations welcome,
" as always.

Another key point is that the same units that operate at that frequency
and open and close the doors of your favorite Safeway store are NOT
licensed either. I don't recall seeing the F.C.C. field engineers SWAT team
raiding shopping centers to confiscate the X-band motion detectors.

A> are, but i am just clarifying that.
A> Thanks

Good grief!! Such a small request!! ;-)
There are several hundred Phoenix area freqs, just for major services. Add all the minor services, and we're in the thousands! All Arizona? That's a book.
At Denny's, at I-17 & Dunlap (NW corner), on the 3rd Wed. at 6:00 PM, there's a get-together of listeners. You can get a good batch of freqs there.
there are a couple of books available, too. Radio Shack, of course, has theirs. Some of the local radio shops have others.
To start you out:
Police:
CH. 1 154.89
CH 2 154.755
CH 3 155.79
CH 4 155.73
CH 5 155.07
CH 6 155.64
CH 7 155.52
CH 8 155.43
CH 9 155.7
CH 10 155.76
CH 11 156.06
CH 12 155.61

CHs 1, 2, & 3 are "chase" channels, for urgent or inter-area traffic.
The others are mainly for specific areas of town.
Fire:
CH 1 154.19 DISPATCH
CH 2 154.25
CH 3 154.07
CH 4 154.28
CH 5 153.83
CH 6 154.31
CH 7 154.145
CH 8 153.77
CH 9 155.67
CH 10 151.37

CH 11 154.025 INVESTIGATION
CH 12 155.775 HAXMAT
CH 13 154.43 CHANDLER (M/A)
Phoenix dispatches for Peoria, Glendale, Tolleson, tempe, Laveen,
Youngtown, Sun City, Sun City West, and Daisy Mountain, as well as
for Phoenix.
Then there's the airports, State, Feds, Railroads, recreation, TV/Media,
utilities, etc.
See ya!

BILL FUNK

I certainly welcome folks visiting San Diego, but there seems to be a misunderstanding about its size. San Diego is a city of well over a million people, in a county of over 2 million. I have seen several messages in the last few months asking for the "San Diego freq.s" as though it would be simple to type them up in an e-mail message. It takes several pages in my personal favorite book (referenced below) just to explain the city's trunked radio system, not to mention all the other agencies in the county, the hundred (or so) military installations, the special interest stuff, etc.

You don't say where you're from, but if you have a copy of Police Call Vol. 9 there is lots of stuff in that book. If you are going to be in town for any length of time, I highly reccommend a book called Scan Fan. It is available at the Ham Radio Outlet for less than $20. It contains fairly complete, detailed, and accurate listings for SD, and the other counties in "Southern California."

Good Luck,

Doug

So if I happen to build a "Transmitter" that just happens to be on the
same freq as the police radar, I'm legal (If I'm only putting out 10 mW
or so.)? This sounds too good to be true.

: look like VHF lengths anyhow.

: What I'd like are the frequencies that these bad boys might be running
: on. Emailing them to here would be the best, but I'll check here as
: well.

USA RR frequencies will be found in the range between
160.215 and 161.565Mhz. Try scanning there and see what turns
up. Amtrak uses the frequencies of the host railroad it runs
on. Plus a few discrete channels of it's own at terminals and
yards. So look for Southern Pacific, or Santa Fe, or Union
Pacific, or whatever freight lines run out there.

Source record: 256897

My Pro-51 in that band (160 MHz) steps in 50 kHz Steps. What exactly are you trying to scan? The pro 51 rounds off to the next "valid" frequency, as do all scanners that I know of. The Pro 2006 does have a feature where you can change the step spaces. You are just entering frequenices that are not "valid" according to the FCC.

My Pro-51 in that band (160 MHz) steps in 50 kHz Steps. What exactly are you trying to scan? The pro 51 rounds off to the next "valid" frequency, as do all scanners that I know of. The Pro 2006 does have a feature where you can change the step spaces. You are just entering frequenices that are not "valid" according to the FCC.

My Pro51 rounds to the next "valid" frequency. You are entering invalid frequencies. All scanners that I know of do this. On the Pro-2006, you can change the steps. The Pro-51 in that band (160 MHz) steps in 50 kHz steps. That is why you can't receive the frequencies mentioned in your letter.

2209. Broome County (NY) TAC frequency

A while ago (in a post I can no longer find) someone asked about the TAC frequency being used by the Broome County Sheriff. I have found this freq. on 156.045. I have heard this called "TAC" or "TAC 1". So far this is the only thing I've found.

Hard to say about good points and bad points. One man's bad point is
another's good point. There was a good review by Bob Parnass on the 3000
in the April Monitoring Times. He liked the unit so much, after he sent
back the demo, he purchased one for himself.

Mirage, Spirit, and a few others are what the MFR claims as "Passive Jammers" The ads are slick but the results the same, they don't work at all. The theory is that the little devices will take the X-mitted signal and then "Re-reflect" it with noise added. Sounds cool, but the tiny little signal thrown back will not equal you cars huge clean signal. So the FCC could really care less about these things since they don't work. I've read many mags that have tested these things and every one said there was no effect. Now there are a few Active Jammers that actuall throw out a 10mW FM sawtooth signal. They work. Not sure about the legality but they're legal to sell

Richard,

The response you got is typical of 'technical' employees who 'got them there third grade edicashun'. No, you won't burn anything up but the battery may overcharge and you'll get less time between charges, that's all. Try getting a spare battery for it ($30 at EEB) and alternate between the two. Depending on the current supplied by the charger it may still charge in 14 hours but I doubt it. It may take longer.

I wonder what Uniden Corporate would think of those highly educated technical answers their human answering machines are giving out?

I have seen McDonald's using 154.6, 154.57, and in the 465-470 Mhz range.

If not known, search 455-460 Mhz and 465-470 Mhz, that's where most all
fast food activity is heard. Occassionally you'll find them on low VHF
in the 30 Mhz range and even 171-173 Mhz range, but I have yet to see
any there. Hope this helps.

You'll hear plenty more of this now that summer is coming. Also pay
attention to VHF/UHF in evenings and early mornings. Lots of tropo
ducting will bring in signals from several hundred miles out at times.

IT>>

many people seem to have misconceptions about the data signalling that
happens after a unit unkeys on some trunking systems. they are NOT
scanner defeating beeps or anything of the sort meant for the sole
purpose of annoying scanner listeners. their functions vary, usually as
control data to the radios on the system after the channel is freed up.

I would buy the 9000XLT. I have this scanner and I think it is great. I love the alphanumeric display, cause I can never remember the actually frequencies....Also, has a singal attuator (sp?) that will cut out some stronger signals and let the the desired one through. I believe I have doubled my listening area just because of this scanner. Also, I think it is cheaper for what you get. Saw and ad in Pop Comm, for a mail order place that has them for $399.95. All in All I think it is a great scanner.

I read in monitoring times somewhere about a board that fits in several base/mobile scanners that will cause the scanner to continue scanning when those tones come up. I think the price was around $50, but I'm not sure.

Are these scanners any cheaper than the same model in the US? I know our
dollar is supposedly worth a lot more in Canada than it has been in the
last few years. Too bad I still don't have the money:-(

2226. Confusing aerials

Newsgroup: rec.radio.scanner
Date: 1995-05-10 00:00:00 UTC
From: dpfg@ukc.ac.uk
Message-ID: <7435@rook.ukc.ac.uk>
Source record: 256918

This is in the context of a handheld scanner with no ground plane or anything, with a small telescopic aerial.

Suppose you want a low frequency, but you cannot extend the aerial enough to get a quarter-wave. Is it best to make the aerial as long as it goes, or to make it an exact eighth-wave?

At the other end, if you want a high frequency so that the aerial could be made into either a quarter-wave, half-wave, fullwave or multiwave, which would be the best option?

This is just for vertical whips, not dipoles or anything fancy like that.

I also read something about removing 5% of the length to get a 50ohm impedance? What on earth is this about, and does it apply to all frequencies in this sort of set-up?

Thanx for advice....

>flexibility....

Unless you require a computer controllable scanner, I agree
the BC9000XLT is easily the better scanner.

The difficult to use keypad and firmware features in the PRO-2035 are
rendered moot if something like an Opto board is installed. What
still troubles me about the PRO-2035 I tested was the receiver
performance.

Perhaps it was saddled with a bad IF filter, but moderately strong
signals desensed weaker signals up to 100 kHz on either side on both VHF
and UHF. That's a problem no computer board will fix.

I'd be interested in hearing from others with a PRO-2035 who
test it side-by-side with another model on the same signals.

PS - I no longer have the PRO-2035.

Won't the "local electronics shop" give you a refund? I know that radio shack gives you 30 days from date of purchase to get a refund with receipt.

2231. Battery Drain on BC2500XLT w/ unit off

Newsgroup: rec.radio.scanner
Date: 1995-05-10 00:00:00 UTC
From: fun1995@imap2.asu.edu
Message-ID: <3oqkbv$p5p@news.asu.edu>
Source record: 256923

While converting my BC2500XLT battery pack to use alkaline batteries, I noticed that the scanner still drew about 3 mA from the battery even when the scanner was switched off. Measuring the resistance of the scanner at the power contacts (w/o the battery connected) indicates about a 217K ohm load and confirms the current draw.

I had assummed that the memory circuit was non-volitle (requiring no power) because I have left the battery disconnected (and even shorted the power contacts together) with no memory loss. Also, 3 mA seems excessive for memory hold up current.

WHY DOES THE SCANNER DRAIN THE BATTERY WITH THE UNIT TURNED OFF?? My only guess is that Uniden placed a load resistor across the battery input to force ni-cad battery maintenace (full disharging). If this is true, I sure would like to remeove this "feature" so I could use alkaline batteries without drianing them.

Probing around in the unit with an ohm meter and with out schematics, I could only determine that the 217K load was somewhere on the key pad card assembly.

Does anyone know which specific resistor is this load resistor, or am I way out in left field on this one. Your comments would be appreciated.

Thanks,

Mark Lucas

In Little Rock we have 20 channel trunk.

JY> I am curious though if the above is true. Does anyone know if the
JY> Motorola System also emits these tones?

No, our Motorola system doesn't emit any tones. What our news services here have done is set up a bank of 2 or more scanners with the 20 channels set up. That way when the repeater times out (2 seconds after the transmission stops) they have a better chance of catching the next part. A couple of problems is that the entire city of Little Rock (Police to Sanitation) use the same trunk. Plus when we have sensitive items to transmit, we go into Digital Voice Privacy (secure mode).

Regards,
Barry Cudd

Sorta. VSWR is a "handy" conventionalism that has some sense of reality to it when you consider pulses and forward and reflected energies. I find it much more useful to consider impedances and the transmission lines and play with the results when I "Smith around a little."

If the antenna on a radar is designed for a mythical 100 ohm transmission line and you hook up 50 ohm transmission line it will not get all the possible energy into the transmission line. Some of the pulse's energy is lost forever. But then you have the other effect of the transmission line, one of impedance transformation. That apparent 100 ohm "source" impedance will be transformed to something else at the far end of the line. Just what will depend on properties half measured with an SWR bridge. (The bridge loses phase information which is critical to a full analysis.) You CAN design a system to operate successfully with an antenna mismatch. But in doing so you want to consider the transformations in the length of transmission line you have. It is *FAR* easier to design for noise figure when you have the antenna designed to work with the transmission line you attach to it.

True and interesting but not contradicting Gary. He was talking narowly
about standing waves at a particular point in the system and was not talking
generally about the effects of impedance discontinuities in the total system.

Hi Zack, I have often wondered why I get the best reception from my HF transceiver when the antenna tuner is properly tuned for transmitting into my 88 ft. "non-resonant" antenna. I have tried and tried, but I just cannot get better broadside reception by retuning or switching to a resonant half-wave dipole.

If there is a conjugate match for transmitting, is there also a conjugate match for receiving? Assuming a conjugate match during receive with no reflections from the load (tuner), does the generator (antenna) impedance affect S/N ratio given the approximately 70 dB dynamic range of my transceiver? Given a mis-match with no reflections, isn't the noise attenuated by the same amount as the desired signal thereby maintaining the same S/N ratio?

Could you give us some law cites or article numbers to back these claims up?

I have been looking for months to verrify the above claims when they have been brought up and am unable to find any valid sections that relate to a low power transmitter operating at radar X band -10.525 GHz - note: ham X band stops at 10.500 GHz, 0.025 GHz away from these devices. On the contrary, section 15.122 states that such devices can be operated at low power for short durations within specific frequencies listed and tuned properly to the specific frequency.

Home built devices can be tested by the builder and measured to fall within FCC rules part 15 and still be legal if they are built in quantities less than 5 and test measurements are available for inspection - as per 15.133

The only reference I've seen against these types of devices was found in the FCC reports, article number F.C.C. 78-326 which denies the Washington traffic Safety Commission license to test similar devices that would be hard wired into utility poles at roughly 10 mile intervals, trnsmitting constantly, and at presumeably higher powers. The reasons given were as follows:

"...The device has not been type-accepted by the Commision; the intended use is not permissible under the Commissions present rules; it would not qualify as a "field disturbance sensor" under part 15 of the rules; and it most likely would not meet the duity cycle limitations imposed upon other low power devices which may be operaed without a license under part 15."

Granted, this was in 1978 and things may have changed since then. Apparently they have as such Highway Zappers are openly sold at ham fests and even in popular magazines and catalogs, as well as other radar emitting devices. For example, 'radar scramblers' that are meant to interfere with police radar guns. The FCC has licensed these devices as per their advertizements. (which adds more credibility to the Zapper issue

- or the-FCC-is-comprised-of-a-bunch-of-speeders theory ;)) Here's excerpts from the ad:

"The Mirage 2001 employs radar masking circuitry, rocketing out silent, un-seen waves that almost 'zero-out' police clocking guns."

"Mirages passive circuitry operates within all FCC guidelines..."

Of course in California you'd have to be on your third ticket in a year to justify the $250 price tag. But I suppose many people are. But that's a different opinion on driving and not relevant here. (HINT HINT)

Please give me some FCC rule numbers that show these devices to be illegal to operate. The above is the closest I've gotten and it tends to show that they are legal within some guidelines. Alternale interpritations welcome, as always.

But then there's always the 'how are they gonna' find me?' issues and 'speeding is OK vs. speeding is not OK' opinions that should be taken elsewhere as they have no solution because you are dealing with opinion vs. opinion. Blech...

Nah, he wasn't "narrowly" discussing only a portion of the issue. He was
telling the original poster not to worry about the antenna vswr because
it was the "source" and the receiver was the "load". Other posters have
pointed out the effects of mismatch on noise figure. I think the bottom
line is that that antenna match is _important_ and Gary implied that you
needn't worry about it.

Yes. Yes. Yes. Yes. Read what I wrote.

>All elements of a receiving or transmitting system are set up with a
>characteristic impedence. In this case it is 50 Ohms. Any variation in
>the impedence outside of a pure resistance will cause mismatch. Any
>mismatch defeats the lossless transfer of energy. VSWR is a measure of a
>device's impedence variation from pure resistance.

VSWR stands for Voltage Standing Wave Ratio. You can't have a standing
wave unless the wave has someplace to stand. No matter what sort of
mismatch you have at the source end of a transmission line, that will
have no effect whatsoever on the VSWR on the transmission line. Only
mismatches at the load end can generate VSWR on a transmission line,
which is generated by *reflections* from the load end of the line.
This means, for example, that you can't claim VSWR losses, as Thomas
did above, on a transmission line that has only a source mismatch
because a source mismatch won't generate VSWR on the line.

>Antenna mismatch is STILL important as it must transfer the recieved
>radio frequency energy into the 50 Ohm coaxial cable transmission line.
>Calling a transmitter or a reciever a "load" or a "source" only labels

>VSWR! You may have to live within a reasonable range as is the case with
>a wideband discone or log-periodic yagi but antenna mismatch is very
>important for a receive-only system.

All resonant antennas have a voltage standing wave (and a current standing wave). It is *required* for their proper operation. Think about that for a minute, then get back to us.

In the case of duplex operation, each direction of signal propagation on the common transmission line must be treated separately with regard to VSWR since the sets of forward and reverse waves are going in different directions, are generated by different sources and loads, and are on different frequencies so standing patterns don't superpose for the two.

Your problem is that you are profoundly confusing VSWR with matching. Consider this example, suppose I have a 50 ohm source and a 100 ohm load. Now suppose I connect the two with a 1/4-wave piece of 75 ohm cable. I now have a matched system, but I also most certainly have a VSWR on the transmission line. In fact, the transmission line wouldn't be operating as a transmission line impedance transformer if it didn't have a VSWR.

Now back to receivers and matching. Matching source and load will give 50% power transfer to the load as the power divides equally between the source impedance and the load impedance, a built in 3 dB loss. This isn't usually what we want. If our receiver front end is a MOSFET or vacuum tube, it's a voltage operated device, and its gate or grid draws zero power. So we don't care about power transfer, instead we want maximum voltage swing. That's best achieved with a *bridging* circuit that only very lightly loads the source. So our receiver should terminate the line with a virtual open circuit, and line length should be chosen so that there is a voltage maximum at the load end of the line. We don't care that the power is reflected back to the antenna and re-radiated since all we need is a voltage swing at the active device. It will have a finite voltage gain, but an infinite (to be theoretically purist we'd say undefined) power gain since its input draws no power.

Now real world receivers often do present a 50 ohm load impedance to the line because of various reasons such as the use of input filter circuitry and due to the fact that real active devices consume more than zero power due to grid to cathode (or gate to source) capacitance, but they are giving away a theoretical 6 dB of voltage swing by doing so. If the receiver is presenting a 50 ohm load to a 50 ohm characteristic impedance transmission line, that line will have 1:1 VSWR regardless of the state of the source match with the antenna. The VSWR of a line terminated in its characteristic impedance must be 1:1.

There is nothing wrong with what Gary said. It is important to remember that most antennas used in amateur radio are reciprocral structures (you have to go to microwave, usually, to find non-reciprocal antennas), and that poor efficiency on transmit will correspond to lower gain on receive.

: In article <1995Apr29.233357.17452@arrl.org>,

: If there is a conjugate match for transmitting, is there also a conjugate
: match for receiving? Assuming a conjugate match during receive with no
: reflections from the load (tuner), does the generator (antenna) impedance
: affect S/N ratio given the approximately 70 dB dynamic range of my
: transceiver? Given a mis-match with no reflections, isn't the noise
: attenuated by the same amount as the desired signal thereby maintaining
: the same S/N ratio?

The impedance presented to a receiver can affect the sensitivity
of a receiver. This is well explained in both Horowitz and Hill's Art of
Electronics and Wes Hayward's Intro to RF design. This effect is easily
displayed with a noise figure meter. An interesting project might be
to make a noise figure meter out of a personal computer/sound card.
The ARRL Handbook has an inexpensive source that could be used.

Practically speaking, there isn't a conjugate match for receiving.
If the receiver is properly designed and built, presenting it with
the transmission impedance (typically 50 or 75 ohms), will result
in the greatest sensitivity. If you work real hard or are willing
to sacrifice sensitivity, you can design and build receivers to
also present the conjugate of the transmission line impedance, but
I have to consider these *special cases*

When using my 2006 in my van with a RS magnet mount scanner antenna, I can easily pick up the nearby McDonald's on 35.02 from about 1/2 mile away.

If I take the same radio in the house and connect it to my Grove Scanner beam, I can't pick up a thing on that freq. The scanner beam is mounted on a 25 foot tower and is connected to the radio with RG-6. (a total of about 35 feet of cable). Would it make a huge difference if I were to switch to RG-8? Is there anything else that would account for the difference? By the way, the antenna is also connected to the rotator with the antenna pointing in the direction of Micky D's.

I'm not that interested in listening to people order Happy Meals, but it is a good, nearby low power frequency that I can count on for checking signals.

Thanks in advance for the help.

From: richard@larry.wyvern.com
Message-ID: <richard.800122008@larry>
Source record: 256972

EEB catalog has an auto antenna splitter. I'd like to install my 15-year-old bearcat in the car. I mostly listen to aircraft band so it seems like the auto antenna would be OK. But, how well does the antenna splitter work? How will the reception be on the scanner or on the car radio? How about the reception on the car radio if the scanner is not connected?

Thanks!
Richard

Source record: 256974

Just for those who may be interested in the BC3000XLT I just got one and so far I really like it. The review by Bob Parness in the April Monitoring Times is right on and the hidden key functions are really nice. I can now turn the light on at night and leave it on if I like. One of my complaints on the Pro-51. I wanted to buy a AOR-8000 but just didn't have the extra 300 or so dollars. The BC3000 has a lot of the features I wanted without the extra cost. Military Air, Lock out on search, and being able to unlock all channels at once. The auto store in search is really nice too. If I only had a computer interface (the real reason I wanted an AR-8000) I would be completly satisfied. Maybe someday but for now this scanner is great... Just my opinion....

Very strange. Scanner should turn on when charging. Only answer I think is
either the adaptor is not supplying current which is unlikely since you say the
batteries are being charged or something is wrong inside. Take it to the
Radio Shack if the warranty is still in effect.

" > do with advertising. Only function. And functionally, they are transmitters.

Brian varine says:
" So if I happen to build a "Transmitter" that just happens to be on the
" same freq as the police radar, I'm legal (If I'm only putting out 10 mW
" or so.)? This sounds too good to be true.

There are portions of MANY bands that allow unlicensed operation for *low
power* transmissions. X-band radar is only one of them. Many of the door
opening sensors at your favorite supermarket use similar low power X-band
transmitters that are marketed as Highway Zappers, and yes, their legal
to own/operate.

Unfortunately, they will *not* "JAM" the police radars even if the PD is
using the antiquated X-band speedguns. They will work to annoy your
friends radar detector if it is close by and they work fine for testing
your own detector.

We have plenty of X band guns out here (Oregon State Police uses ONLY X).
I may try building a transmitter and add a little FM sawtooth say +/- 2000Hz?
I think that would do the trick. Anyone?

>Are these scanners any cheaper than the same model in the US? I know our
>dollar is supposedly worth a lot more in Canada than it has been in the
>last few years. Too bad I still don't have the money:-(

Well, places like Atlantic Scam Radio bilk U.S. customers. Since they are the
only Canadian store to advertise in U.S. publications, they make U.S.
customers think that there is no other place to buy the radios. They charge
$800 U.S. for a radio that sells for $600 here at home...

That kind of markup caused me to investigate other scanner stores in England
and Canada. In the end, I decided against buying from England just because of
the distance factor....

Anyway, there are many scanner stores in Canada. Not all will ship to the U.S.
I shopped around and found that Durham Radio has the best prices- better than
most stores in the U.S.!! You should call and get some prices yourself.

Keith, the owner, is very helpful and I am pretty sure you will be pleased
with his prices. At least shop around and check him out... What have you got
to lose???

PS- Again, I am not connected to this store in any way. I am just sharing my
knowledge, since I spent a month searching for Canadian and British scanner
stores and finally settled on Durham....

Or just make it a standard to x-post articles to both newsgroups. But
that could be impossible at sites that don't carry the rec or alt
newsfeeds.

Suggestions?

Tony.

Lets look at this a little differently. This is not a NET COPS issue.

What you are seeing is the local citizens here in these groups trying to clean up the graffitti and posters on all the telephone poles in our neighborhood. The NET COPS can't touch all that graffitti, they are too busy being NET COPS.

I don't think any of us mind a commercial poster with some new information or a new product to sell. You can't ignore it!

Just what does a new cd-rom of amateur programs found here on the internet, have to do with Amateur Space, Policy, Digital, Antennas?

This graffitti should be seen in rec.radio.swap where there is no confusion about the commercial nature of the offer.

Would you like this graffitti problem in your neighborhood? The inner cities look like Hell, because no one cares. These commercial cd-rom folks will stop advertizing in our Amateur Radio Magazines and post here for Free. Do you want all the nuts and bolts magazine ads in our news groups? Hunderds of those little ads every week over and over. Then no more ham magazines...

Almost as bad as the SALE@ALLUS on amateur packet. Does anyone really read all that junk? Oh Sure! go eat a cookie.

Bob ;-)

James, we have here a case of reading more than was written. Where did Gary tell anyone what to worry about or not? Gary wrote four lines and only four. He implies that the only power in the transmission line is flowing from antenna to receiver and correctly identifies the only impedance discontinuity which can induce a variation in standing voltage in the transmission line. He says nothing about what this implies for for the state of the nation in general or noise figures in particular. Believe me or read it again for yourself.

(Here we go again. Was Maxwell (Gary) right or not? And who cares?)

>line is that that antenna match is _important_ and Gary implied that you
>needn't worry about it.

No, that's not what I implied at all. I was replying very carefully
to the mistaken idea that there are additional "SWR losses" on a
transmission line in a receiving system when the antenna terminal
impedance and the cable characteristic impedance are not matched.
I was pointing out that the impedance of the source can have no
effect on the VSWR on the line to the receiver, so there can be
no VSWR losses in the cable due to that source mismatch. Only a
mismatch at the load end of a line can cause VSWR on the line,
and thus incur the additional losses due to VSWR shown in the
antenna book nomographs.

If used for transmission, *then* there would be additional VSWR
losses because the antenna would then be the load, and the mismatch
there *would* cause a non-unity VSWR on the line and incur the
extra losses. The direction of signal flow matters.

None of the above implies that a mismatch at the antenna won't
yield less than maximum power transfer from the antenna to the

receiver, it most certainly will. But in most cases, transferring *power* is not the point of the exercise with receivers. In most cases, we *want* a mismatch at the receiver to obtain the best SNR. I covered this in some detail in another post.

Gary

That would suck, Marymac had the absolute best prices on Realistic
gear! They also had very good service.

Sam

>Richard
>--
>richard@infi.net, Norfolk, Virginia, USA

Hi Richard,

I installed one of these in my car to cut down on the number of antennas
and to keep my ham antenna far away from the scanner antenna. It works
great for the scanner but does introduce intermod into the FM broadcast
radio in certain areas.

ASTRO from Motorola is pure crap. It's all digital . Scannists can't monitor it. LEO's who hate scannists love it , and it's a huge waste of your money as an
American taxpayer if your public safety agency goes to this system. Average cost to you - again the taxpayer - is about 12 Million MINIMUM !!. Just another ploy by the idiots out of Schaumburg to schoomz all public safety agencies to buy all their new toys , whether the agency really needs them or not.

Translation-- It keeps the fat cats in Schaumburg rich as hell , but breaks the
bank in your local community. and worst of all , it's coming out
of your pockets!!

A concerned monitor who is NOT a criminal (even though some LEO's think we all
are),

In the UK it is technically illegal, although I don't think that the police really bother unless you're listening in on Police freqs. Certainly airband listening isn't a problem. If they went and arrested anyone who was using a scanner the courts would be full for the next 10 years!

I've been approached by police at airports and asked what I was listening to, when I replied that it was the aircraft she seemed reasonably happy, "just so] long as its not us" was the response!

This is a really moronic answer from Uniden if
it is authentic. The AC adapter doesn't even plug
into the radio, it plugs into the battery pack.
Presumably the worst that you can do is toast the
battery pack. Someone with expertise on NiCads may
be better qualified to answer this question. I've
got a related question: Has anyone who owns a BC3000XLT
and leaves it plugged in for longs periods of time
ever see the CHARGE LED on the battery pack ever
go *out*? This would be a key indication as to how
risky it is to leave the thing plugged in continuously.
Presumably if the battery packs contain an intelligent
charging circuit, the CHARGE LED would go out when
the battery is fully charged, indicating relative safety
with leaving the thing plugged in full time. I've only
had mine for a few days and haven't left it plugged
in continuously and hence haven't seen the CHARGE LED
go out.

>
> P.S. Does the unit recharge while using the auto adapter?
>
One would assume so seeing as the auto adapter plugs into

the same jack as the AC adapter.

Fear not! I purchased a refurbished BC200xlt from Damark for
~$170us, and I have cell modified it. I believe these radios have been
sitting around a while, if it means anything to anyone, the circuit board
said 1988, although I suppose this is when the 200xlt was redesigned last?
One word of warning to do the cellmod on my radio was slightly different
that the more common mod that is out there for 200xlt. The mod is the same
essentially, the resistor was just moved :) Maybe Uniden reads Usenet
too, ya never know! Anyone interested in Damark, 1-800-729-9000. Be sure
to ask for the _refurbished_ product, or they'll sell you a new one at
higher cost!

You're listening to the Air Route Traffic Control Center frequency
and its REMOTED transmitter SITE. This is to ensure that there is
unrestriced IFR operations within the high and low altitude enroute
sectors. 720 channel comm equipment with 25 mhz spacing is required.

You are listening to NEW YORK CENTER on 125.325 and 127.175 using the
local Matawan site.

I'm lucky here in Millville NJ, I can get NY and Wash Center clear
as a bell from the local site, 3 miles away. Good stuff...

On 10 May 95 04:20pm, BOB wrote to ALL:

B> What does the term input to another freq. mean when found in freq
B> listing books? There will be a list of freqs. then below another freq
B> listed that says it is input to one listed above. Do I need to use
B> these too when scanning or just the one that it inputs to?

Usually, when a particular channel or service has two frequencies listed, with one as "input", then the other is, by convention, "output". This means that the channel or service is using a repeater. The input means the frequency used to access the repeater, and the output is the frequency the repeater transmits on.
Many services use repeaters, with the antennas mounted someplace high to provide good coverage. For example, a ploice department may use a repeater because the patrol cars have radios of 5 or 10 watts output, which can be difficult to hear car-to-car. When the repeater antenna picks up this signal, it repeats it using higher power so that all cars on that frequency can hear it. A dispatcher may also use the output of the repeater.
Hope this helps.

BV> So if I happen to build a "Transmitter" that just happens to be on the
BV> same freq as the police radar, I'm legal (If I'm only putting out 10 mW
BV> or so.)? This sounds too good to be true.

As far as the FCC is concerned as to the construction and operation, you are
in the clear.
What a lot of people seem to be missing is that the use the object is put to
can be illegal, without the slightest hint that the object itself is
illegal.
For example, if I hit someone with a baseball bat, that's assault. Does that
mean the bat is illegal? Of course not.
So if I have a transmitter that operates on the X-band, and meets all FCC
regs for power output, etc., and I use it to jam Police radar, is the unit
illegal, or is the USE of it illegal? (Hint: it's the USE) Why? Interference
with an officer comes to mind. I'm sure there are others. But the unit
itself is still legal.
Sort of the whole idea of gun control. It ain't the gun's fault. It's the
gun user's fault.
But then, it's a lot easier to blame a thing as opposed to blaming a person.

TW> adjustment be done without special equipment?

I have a '43 hooked up to a 9 volt source, and tried what you described, and
didn't get the same results. Having an off-board DC source made no
difference to my '43 (actually, both my '43's acted the same). You may have
a problem.

TW> o The speaker of the -43 seems to get overloaded above 50% volume.
TW> Above 50% it also seems that it vibrates and ratteles like something is
TW> loose. I've checked it and nothing is loose that I can see. Is this
TW> common? I've seen posting's on replacement speakers. The speaker is
TW> glued in. How is it removed and how does it get wired in?

This is a well-known problem with the '43. The later speaker makes a
difference.
On mine, I use RS's clip-on speaker, CAT# 20-009, almost all the time I carry
it mobile. I just put the '43 in a back pocket, clip the mike to something
near my ear, and both hands are free, and I hear a lot better, too.

I just bought the last one off the shelf in the outlet store here in cleveland. I got it for $179 and they included the five year service warranty. I have been looking high and low for mods for this one though to no avail any direction? From what I understand or was told by the salesman it is one of the last kind that will be able to be modified before the new laws take effect in a few months. Anyone know the lowdown on what frequencies they are going to limit?

For mounting of handlhelds, I've been using Velcro strips on a pouch and the same
for my mini-speakers, without the pouches. Antennas of various kinds, with
BNC connectors, are mounted on a RS window mount on the right rear window.
Works very well with power windows and pinches up tight.

: many cities in Ma that are illegially giving speeding tickets
: to increase revenue. The star sets the limits for the towns
: however many towns have "broken the state mandated speeds" and
: have reduced the limits, just for $$$, not for safety!!!

We have that in Michigan (the 'Screw You B.C.' State). You're cruising down the highway at 55 to 60 when up pops a mini burg with a 30 to 35 MPH limit - no schools, maybe a gas station and two cross streets and a half dozen driveways. And a cop ready and waiting to write up for 5 over!

Trust me folks! Speed traps are not just a Southern Thang.

2326. Re: Freq listings What does input to mean?

Newsgroup: rec.radio.scanner
Date: 1995-05-11 00:00:00 UTC
From: robert@eden.com
Message-ID: <3os4gb$t8v@boris.eden.com>
Source record: 256870

Inputs are the frequencies that you use to hit the repeater with..

Let's say the police you listen to are on 460.100 well there is technically only one transmitter on that frequency and it is the repeater.. everyone else reaches the repeater by transmitting on the input (which for UHF is +5 mhz or 465.100)

you can listen to the input but you will only hear units that are close to you. There is no set pattern for VHF inputs. so that's why many lists will have them.

the crazy thing is that by looking in Police Call or similar book you will see inputs and outputs.. and you want to most likely listen to just the ouputs.

I just got a Radio Shack Pro-39 and I was wondering if it the scanner
could be used while I am charging the nicad batteries.
I plug the AC adapter into the CHG jack on the scanner.
The manual says "The CHG jack supplies power to operate the scanner, and
it also sends power to the internal batteries to recharge them."
When I did this, the scanner did not turn on. But the batteries are charging
though. Is there something wrong with mine?
Jerry

: What is an IFB Channel?

Radio/TV term for Interruptible FeedBack. The audio channel of the
current programming with the director being able to interrupt for cueing the
reporters when they are coming up. That's when the earplug in a
reporter's ear is for. Local TV stations usually use cellular phones for
this (they have equipment to connect the IFB to the cell phone). There
are other ways to deliver IFB too (some sat. trucks run it on their uplink).

Now you know more about IFB then you probably wanted to know.

Well, for one thing, it's inconvenient to try to have the case on when
using the computer interface. For another, the ink shouldn't wear off
so easy... Still, it's only a case of a batch of keypads with bad
ink. Could have happened to any company.

Thanks guys...

This NET-COP phenomena is the damnedest counter-productive thing I have ever seen. If I was truly spamming the groups with some trash, I would love every netcop that jumped on my posting. Hey, in advertising, any press is good press. Let's say I only intended to post just once but I made a mistake and it took a couple of postings to correct that. I would have only created three postings about as long as this one is. If that was all, I would be worried about getting enough exposure. BUT NOOO... I can count on at least a half dozen jerks with their heads up their butts jumping on my case and keeping my ad running for at least a couple of weeks. It doesn't even matter whether or not my "ad" is relevant to the newsgroups I post it in. I certainly welcome the quarterly, less than 1k, posting about the Ham CD's. Even if I hated them, would I want to have the newsgroup cluttered with 100k of netcop ranting? A good cop understands some human nature and knows when to let things slide or when to just let go...

>Anybody know?

Mobile scanners are legal in NJ. A law was passed in 1992 ? signed by Gov. Florio that repealed the ban on scanners in cars.

Replacing the ban were two new laws. Possession of a scanner during a crime is a 4th degree crime (18 months). Use of a scanner in committing a crime is a 3rd degree crime (3 years).

I don't think speeding meets the legal definition of a crime, so using a scanner to speed is probably not illegal. I'll try to check, though.

: What tones / freqs does the RS weatherradios look for from the NWS to
: sound an alert?

: --
: -- Dave Stuart
: dstuart@umr.edu

Channel Frequencies: 162.400
162.425
162.450
162.475
162.500
162.525
162.550

Alert Tone Modulation Frequency: 1050 Hz,
Alert Tone Modulation Level: +/- 4.25kHz FM

Note that, in the next year or two, the Weather Service will start
using a system called WRSAME (Weather Radio Specific Area Message
Encoder). Here's what NOAA's fact sheet says (in part):

The current nationwide minimum standard weather radio alerting system
has two major weaknesses. First, the warning alarm tone used on all
weather stations is a single 1050 Hz tone transmitted for 10 seconds.
A typical weather radio transmitter is designed to cover a circular
area of approximately 40 miles radius of the transmitter. This is
roughly an area of 5,000 square miles and usually covers 8 to 12
average size counties. A majority of the serious weather events
(tornadoes, flash floods, severe thunderstorms, etc.) occur or
threaten the population of an area much smaller than the total
coverage of the station...<stuff deleted>...It is possible, therefore,
for many people to receive what might be considered "false alarms."

The second problem with the present warning system is the lack of a
signal to the user of a receiver that the broadcast of the initial
watch or warning message is complete. Without htis feature, receivers
utilized for automated second tier distribution remain activated
unless they are equipped with a timeout function. A timeout function
is normally impractical because of the varying length of each message.

WRSAME BASIC SYSTEM CAPABILITIES

The current encoder system provides the NWS with the capability to
transmit a code that can identify up to 80 separate weather related,
civil emergency, test/administrative messages by specific event. It
can indicate one or up to any combination of 31 counties or other

defined geographical areas affected by the event or message...

This would be implemented "on top of" the current activation system so
old receivers will continue to get areawide activation (as they do now).

I have found that it is actually easier to user the AR8000 keypad
WITH the case, since now you can kinda skim your fingers around
the keypad and hit a sequence of buttons much faster. With the
grippyness of the raw buttons without the cover you can't
move around the keypad nearly as quickly.

Hi and thanks for reading this.
I've been having a rough time trying to find information for a
Bearcat IV Scanner. Uniden does not have it, as I've already asked.
Does anyone out there have it?
Also, I'm not in the right forum for this one, but I need a schematic
at the least or all service data for a Sparkomatic HM 1123 CB set.
I've been in some other forums and I seem to see more of a crowd here.

Also, are there any known mods for a PRO 2028? I've not seen any listed
as yet to my recollection.

There was someone on here about a week ago who claimed to have a disk
full of Radio Shack mods, for the scanners. If you are reading this, I'm
inviting you to respond, as I'd like to talk to you.
Thanks in advance for any help that I might get.

2350. Some Rail Scan Freqs.

Newsgroup: rec.radio.scanner
Date: 1995-05-12 00:00:00 UTC
From: Torpor@Fnalv.fnal.gov
Message-ID: <3p0e53$4sj@fnnews.fnal.gov>
Source record: 256741

Someone asked for some Amtrak frequencies. I used to make
a regular trip from Chicago to Miami via Wash DC.
Here are the frequencies I found along the way:

---------------RAIL SCANNER FREQUENCIES-----------------------
160.215 - 161.565

City - City RR Frequencies

Miami, FL to Richmond, VA CSX 161.10
Rahielgh, NC to Richmond, VA CSX 160.59
Richmond, VA to Washington, DC RF&P 161.55
Richmond, VA to Washington, DC RF&P 160.92
Washington, DC to Harrisburg, PA AMTRAK 160.23
Washington, DC station operations ------- 160.44
Washington, DC to Pittsburgh, PA CSX 160.23
Pittsburgh, PA to Chicago, IL CONRAIL 160.80

Sometimes if the rail crew wants to coordinate with another
company, they will jump to other frequencies. Just keep that
scan range handy so you can follow them.
Chicago Union Station also has their security police on a
repeater. I can't find it at the moment, but it's not difficult
to find with your scanner.

I have a little story; I was waiting to leave Chicago Union
Station while listening to the security frequency. The police
were looking for a pick-pocket and gave his desciption over the
air. 30 seconds later I came across this individual walking
past me. 15 seconds later, I saw a cop go past me in the other
direction (presumably looking for the pick-pocket).
I did not intervene by telling the cop where the pick-pocket
went because I (most) probably would have been asked HOW I KNEW.
This may have delayed me enough to miss my train. I wanted to
help, but it was in my own best interest not to.
Incidently, this was all "stealth monitoring". My scanner
was under my coat and I was using "WalkMan" type headphones
so I blended in with the crowd.

D>countries? I'd hate to have to bequeath it to a customs agent.

D>--Dave Voelker
D>dvoelker@netins.net

Dave,

My understanding is that in England it is illegal to listen to any
police service's over a scanner. I am unaware of the laws in Holland or
Germany. I read a humorous artical once where the police in England
broadcast a fake UFO landing out in the middle of no-where. They
arrested everyone that showed up for monitoring police frequences,

IM>any other part of the country?

IM>Thanks for any suggestions, comments, or help,

IM>Sam

this is a fairly annoying problem, but unfortunately with your typical
double conversion type scanner, you're gonna run into it quite a bit.
the only thing you can really do is have some sort of filter that blanks
out the 870-890 range, but i know of none on the market. the only other
thing that you could really do (if you're rich and have $$ to burn) is
purchase the type of radio orange county uses for their fire dept and go
beg the county to program it for you.

i live in san jose, and the cellular coverage up here is so good that it
kills all the weak 800MHz signals up here that i like to listen to, such
as AMR west (medics), and caltrans and the whole lot. no scanner is
selective or sensitive enough to pull out all the stuff i want and hold
back the cellular garbage. i finally got fed up enough and grabbed an
older (late 80's model) motorola mtx 200+ channel trunking /
conventional handheld and had it programmed up for the stuff by my
friend. everything now comes in crystal clear, but the radio cost me
over $600. quite a price to pay for good 800MHz reception.

IN>>
IN>>greg
IN>>
IN>>kd6ven

IN> Ok, but how can one get around those tones to better monitor?

there really aren't many options. i suppose someone could, using their computer and a sound card, squelch out the unwanted data signals, but i don't know of any software for this purpose. the only real way to get rid of the data bursts and beeps is to pretty much have the same radio the department or departments you are trying to monitor. you'd have to shell out a good deal of cash for the radio (somewhere in the neighborhood of $1000), the beg the city or county agency(ies) to program the radio for you. good luck. i have dedicated radios for trunking and other 808MHz systems not only for this purpose, but also to filter out the deluge of cellular traffic in my area which causes an unbelieveable amount of desense and interference with regular scanners. even my icom r7000 has problems receiving the local mednet channels for AMR. i guess it's just my area.

Fellow Scanner Dudes:

I have 2 questions.

1) Does anybody have an electronic listing of the main emergency svcs freqs for the SA, TX metro area, that wouldn't mind sending to me? I can't seem to locate a copy of the Radio Shack $10 freqs book for Texas and need these freqs for this weekend.

2) In a more global sense, is there an FTP site, Gopher site, or WWW page that contains freqs listings for several areas across the country? Been reading these 2 groups regularly and haven't seen anything to this effect, nor does the FAQ say anything. Maybe I just missed it.

Any help is greatly appreciated. Keep on Scannin'.

Two suggestions:
1. Use an outside antenna. A company called "lakefield co" down south make
a cellular look-alike that just works great, and does not give away what
you have. E-Mail if you need me to dig up the address, but they make
amateur antennas and probab ly can be found on these ham boards.
2. Radio shack make an amplified comm speaker which you really need in a
car in order to overcome the poor audio of this unit. It is powered off the
car, and shuts off a few seconds after the audio stops, so does not run
down your car battery. It is around $25.00, and well worth it.

Is it RCI or maybe RCO? If it's RCO, then it's referring to a remote antenna station for a Flight Service Station, or FSS (took me a long time to figure this abbreviation out, and I'm a pilot). Unfortunately, I've since forgotten what it stands for. Some other pilots, including the one who wrote the above, might remember what it stands for.

Does this help?

I use the RS discone (modified with a vertical element for better loband 30-76mhz) with an RS tv amplifier. Works great! I've heard that the discone without signal amplification is not too hot. The diamond discone includes a vertical element while the RS does not. HTH

Well, the 146.94 repeater in Merritt Island carrries NASA select. You might try rec.radio.amateur.space and sci.space.shuttle FMI. a few freqs I have on a list (I won't vouch for these being audible, though):

Launch tracking net: 7525, 20186
OCC Shuttle mission audio: 20198
Data channels: 7919, 1985, 13237, 13495
SRB recovery: 2622 primary, 2764, 3187, 4510, 7765, 11407, 11621
NASA tracking vessels: 5180, 5187
Launch support ships: 5680,11104, 11252, 18009, 19303
Launch support aircraft: 5350, 7676, 9022, 9043, 9132, 13227, 13878
Cape radio: 6896, 6837, 11414, 11548, 19640, 23413

Shuttle freqs:
Primary, air-to-ground or orbiter-to-suit: 296.800
Air-to-ground or suit-to-orbiter: 259.700
Suit-to-orbiter or suit-to-suit: 279.00

Communications and other stuff: S-band (Mhz)
air-to-ground: 2205.000
Air-to-ground secondary: 2217.500
Sir-to-ground primary digital downlink: 2287.500
Ground-to-air: 2041.900, 2201.400
Primary (USAF uplink, phase modulation): 1831.800
Secondary: 1775.100
Wideband FM w/ main engine analog telemetry during launch, or TV during orbit ops: 2250.00

(the S-band voice freqs are digital slope delta modulation & MUX'ed in with the rest of the orbiter telemetry, hence are very hard to copy. Most of the TV is wideband FM & easy to copy.

Ku-band digital (50 Mbits/sec... wow): 15.003 GHz.. directed at TDRS, probably can't be heard on the ground.

Hope this helps! Oh yeah, listen to 145.55 while it's in orbit, that's the SAREX amateur radio downlink (voice & packet radio).

-Mike

Danny, I guess I'm just thick today. Turn it on, put it in front of your radio, and watch? Doesn't that work?
There are lots of ways of using such recorders with scanners. I use one on a PRO-43, to monitor our FD's dispatch frequency, so I have a record of such dispatches when I monitor for an Emergency Notification Group. Simple, really: just use a patch cord from the headphone out to the input of the recorder. When the squelch breaks, the recorder starts. When the squelch closes, the recorder continues for a few seconds, then stops, making a nice blank spot on the tape between dispatches.
Is this what you are looking for?

JE> it is to try every one of the codes (with a computer) until you get one
JE> that sounds like a human voice; very time consuming.

Pain in the ass is an unerstatement. With 64k possible permutations, trying one a second (ya gotta hear it to see if you've cracked it), that's 17.7 hours to run through all 64k. Figure an average would be 1/2 that on a random run, and that means that the call would have to last 8.8 hours on the average before you cracked it.
Obviously, a taped conversation could be cracked, but real time is out of the question, over the air.
This is why the Feds want the ability to tap into the conversation off the air.
Something that makes me smile: the people who want the *MOST SECURE* cordless phones they can find. Simple inversion will foil most casual scanner users. Anyone who really wants to listen will tap the hardline; no security there!

R> I have a PRO-46 and a PRO-2032, Would a RS discone antenna be worth the
R> money? If not, what would be a good antenna that is fairly cheap?

A discone will be a great antenna, if it will do what you want it to do.
Discones are omnidirectional, broadband, very low gain antennas. This means
that they will receive signals equally well from all directions with no
nulls (by design - there may be dead spots due to the local topology), and
will receive from about 40 MHz to about 1300 MHz (for most scanner discones
- the RS model only goes down to about 100 MHz as stock). For the most part,
it will perform well in an urban area, with signals coming from all around.
However, it your situation is such that you want to mainly receive signals
from one direction (say you live on the outskirts of a city), a directional
antenna may serve you better.
A 'tri-bander' antenna (Grove's Scantenna, for example) will perform well in
the HI & LO VHF & UHF bands, ignoring the rest (where there's not much,
anyway), and will have some gain in those bands, as opposed to the discone,
which has no gain.
Different antennas for different uses. I use a RS discone for my R-7100, as
I use it for some odd services. I use a RS tri-bander for my other scanners,
as they are usually scanning the standard 15X.xx & 14X.xx bands, for local
PS & utilities.
Hope this helps. Ask if you want more info... We all love to show off!!

JW> it also sends power to the internal batteries to recharge them."
JW> When I did this, the scanner did not turn on. But the batteries are
JW> charging though. Is there something wrong with mine?

Probably. On RS scanners, if there's power going into the CHG jack, the
scanner should be able to be used, as the power cord will provide power to
both the scanner circuitry AND the charging circuit.
The power jacks are not well supported, and it's very possible that yours
has come loose or been otherwise damaged. They are only soldered onto a
board, and not otherwise supported.
Hope this helps.

NOTE:
The un-modifyable version of the PRO-43 can be identified by two distinctive features:
1. They have the letter "A" appearing as the first character of their serial number. The serial number appears on the back of the PRO-43 as well as on a sticker on the box.
2. The FCC ID number of the unmodifiable version is "AA0020-300A".This file is meant to replace the old PRO-43 mod file.
17.12.92

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out you should not remove but MOVE the diode. Doing so allows cellular coverage as
well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them. They are selling the PRO-43 for $300 which is $50 less than Radio Shack. I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone
conversations.

The following procedure requires familiarity with microcircuit soldering and
will violate your warranty. Grove Enterprises assumes no liability resulting
from its attempt, nor will accept the modified scanner for return under any
condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips
screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully
unsolder the two antenna connections from the board. Bend the antenna ground
tab fully up from the board. Carefully lift the board, unplugging the black
connector at its base, and lay the board out of the way on its bundle of
colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging
the white connector at the bottom of the board. Lift it up and lay it aside on
its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the
microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes
D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4,
the lone diode (this restores cellular frequencies which will be searched in 30
kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band
coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the
plugs. Test the radio by entering any frequency between 870 and 890 MHz
(cellular) and 51-88 MHz (low band).

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend
antenna ground lead up out of the way). Be careful of black connector at
bottom of board. Flip board over and lay aside (wire connectors need not be
disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of

two
multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note
that one
end of connector has pin 10 labeled as such. Count back to pin 6 and
bend
pin 6 ninety degrees towards the large RF shield. Make sure the bent
pin
clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The
lack of treble makes it difficult to hear the PRO-43 in
noisy situations, especially while listening in a car
or truck. Louis Shirley sent me a schematic and sug-
gested I remove C341, a tiny 0.015 ufd surface mount
capacitor.

I'm glad to report that removing C341 made a great
improvement. The audio is now much "crisper," more
like the Uniden 200xlt, although still not quite as
loud. Turning the volume control up still overloads
the PRO-43's small, internal speaker, but there's less
need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the
middle (second) board contains the audio circuitry.
Finding C341 is difficult, as it is neither marked with
a value nor a component designation. It is located on
the foil side of the middle board, under IC304, an
LM386 amplifier IC. C341 is in parallel with, and phy-
sically next to, R350 (33,000 ohm). R350 is slightly
larger than C341 and is marked 333. Both R350 and C341
are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European
version of the PRO-43 has different coils and capaci-
tors in the low (mid) band front end filter. That
explains why the 75 MHz sensitivity isn't stellar after

adding diode D3 to enable 30-88 MHz coverage.

---

> sure.

The sound squelch (squelches any silent transmissions) seems to mostly
cure this on my RS 2006 since it changes channels after the voice and
before the beep. This feature is not available on all scanners however.

I talked to AOR and they told me that they did have initial bad batch of keyboards. They also said if my AR8000 did have the problem they would exchange it for a new one, but felt that none of the current stock would be a problem. I have used the radio for about 2 weeks now with the Radio Shack Telescopic Antenna ($9.99) and it works great, even the shortwave bands are acceptable for its size. One great feature is the ability to "tag" each channel with a 6 char alpha-numeric name Ex. BBC1. It seems to be one of the few scanners on the market with this wide range and other unique abilities.

Hi Chip; here in Anne Arundel, (or as we say it here, AA county), the police along with many other agencies are on 800 mhz; specifically, the pairs are:

8xx = 856 thru 860 Mhz
8xx.3625 8xx.3875 8xx.4125 (which is mostly printer and housekeeping data so you can ignore these)

The fire dispatch relays are on 154.01. As for Prince George's they are segregated by city, so if you could be a bit more specific I can look them up for you; or you can look in my mdvadc.zip file I just uploaded locally, and should be being distributed nationally very soon. It has LOTS of stuff for PG county.

See ya and good luck....Mike Agner KA3JJZ

Hi,

A friend of mine just did the mod on a Pro-39. He took out D6 and it has a date code of July 93 and while the unit will now scan the 800 range it does not pick up anything. Other scanners sitting right next to it do pick up signals though.

Any ideas????

2390. Pro 2006/OPTO456/Software FOR SALE

Newsgroup: rec.radio.scanner
Date: 1995-05-12 00:00:00 UTC
From: "Jeffrey L. Wyke" <jlwyke@ionet.net>
Message-ID: <3oucu2$kei@ionews.ionet.net>
Source record: 256802

From: jlwyke@ionet.net

I have a Radio Shack Pro-2006, Optoelectronics OS456 and ScanStar Pro (latest version) for sale. Whole package is 6 months old. I did the install of the OS456 myself (electronic technician), and everything is in EXCELLENT condition!!

Package cost me $738.00. I will sell for $595.00 complete. I will pay for UPS GROUND to you, and you can call me if you need help with setup, etc. I will NOT split up the package, and only serious inquiries need respond.

You will not be disappointed. I am only selling because I got an AR8000, interface and software.

Jeff Norman, Oklahoma

Do you work for Uniden or something???

I'll just take a stab at the question about the "Astro Channel".

First off, the term "Astro" refers to a line of products that have new and very versitile capabilities. It's not all digital. It's whatever the user wants it to be. It can be 25KHz or 12.5KHz digital or analog, conventional or trunked, secure or whatever. And different modes can be programmed as needed channel by channel.

Just because an agency has purchased Astro radios doesn't mean that they have changed their entire system.

Since available channels in most areas don't exist, users have to maximize the channels they have. Going digital offers some deterence from monitoring, but the real advantage to digital is expanding capacity and getting features that are cumbersome over analog.

I would guess that when someone says, "switch to the Astro Channel" they are going to a frequency where they utilize the digital stuff.

I have demoed this stuff but we have purchased any of it. The digital technology is improved over what was available before. Voices don't sound so "mechanical" to the users. And with that improvement, encryption doesn't degrade the audio quality like it does on our Sabers. And you can double the use of your bandwidth compared to a conventional 25KHz system.

>lots of frequencies that say "blah blah blah GO". What
>does the "go" mean?

ATIS - Automatic Terminal Information System (Aviation)
IMTS - Improved Mobile Telephone Service (dated B.C. or before cellular)
RCI - not sure
ARTCC - Air Route Traffic Control Center (Aviation)

"GO" - You mean you hear people on these freqs ending transmissions by
saying "GO"? As in short for "Go ahead"? Which is sometimes used in
place of "over". Just guessing since I am not quite sure where you hear
or see this..

I have a opto electronics M1 and think its verry good. The only draw back is the brain dead tech they have if you need any info on it. I called to ask about the interface to record to my pc and he could not give me an answer. The 3300 is one up from the M1 with more features if this is what you want. I paid $199.00 from a local Ham Radio dealer and the 3300 was about a $100.00 more.

I too had problems with the EDCO interface, Twice !! I finally returned them both
and ordered the Optoelectronics (Voice 305 771 2050). It arrived in two days. When I got
the package I thought the sent me something else
due to the weight of the package. I turns out they send a little blsck box, a power supply,
the connector for the AR8K, two mini stereo
cables to hook up the units, and a Rs232 cable. I WAS IMPRESSED. I had it hooked up and
running in 10 Min. no problems at all. It works
GREAT and I highly recommend THIS unit over the EDCO. E-Mail me if you need additional
info.

P.S.No, I do not have stock in Optoelectronics.

Happy Scanning.
Dan

That's not entirely true. There are mention of such devices in part 15 of
the FCC rules. I didn't make a copy of the specific part though, but I did
see mention of the devices in the index. Perhaps someone else could expand
on this for me?

Thanks

Why not just shoot them. When that boy passes you and gives you a hard-on,
why not just roll down the window and blow him away? No, instead you pull out
your oscillator and, aiming carefully, you light up his LED! wow, what a rush.
You are really fucked up to go after this kind of power. Even an old lady who
confronts the boy and waggles her finger in the boys face, has more self esteem
than you. Your just a wimp.

At risk of adding fuel to the fire, I'd like to point out that
KB2SGX is an amateur radio callsign. You are more likely to catch him
on 2-meter (144-148 mhz) than 11-meter (CB).

Now back to our regularly scheduled flame war.

Since we're getting off on a tangent here, let's step back and take a look. Even though netiquette frowns on advertising, I enjoy hearing of new products that are closely related to amateur radio. Let's face it...for those of us with 'Net access, we're going to hear about it here well before it hits CQ, QST or the other mags.

Here's something that works for the Linux enthuiasts: a moderated group for announcements, which permits new product announcements, as well as other announcements of general interest to that group. The subject lines for advertising-related announcements begin with "COMMERCIAL:" While I ordinarily dissaprove of moderated groups on censorship grounds, this works quite well. Linux enthusiasts can browse this newsgroup, skipping all posts that are clearly marked as commercials if they wish. The function of the moderator is to keep posts not related to Linux off the newsgroup.

So...I'll pose the question...are we ready to propose adding rec.radio.amateur.announce to the hierarchy?

2415. Re: NYC and Whippany, NY freqs

Newsgroup: rec.radio.scanner
Date: 1995-05-13 00:00:00 UTC
From: Don Hayes <donhayes@delphi.com>
Message-ID: <Ri8+bal.donhayes@delphi.com>
Source record: 256679

Here are a few that you may find interesting....
Newark Airport 118.3 Morristown Airport 118.1 LaGuardia Airport 118.7
NYPD Aviation 123.1 US Coast Guard NY Harbor 156.8
JFK Airport 119.1 123.9 NYFD 154.43 NYFD Fireboats 460.575
WNBC 450.3875 WNBC 161.67 2meter repeater 145.45

As you can imagine, there are loads of freqs to listen to in the NYC area. Elmhurst is in Queens, I think. If you get a chance, tune in 146.805 on Tues evening at 8PM. They conduct a scanner club net where they exchange freqs and info on the monitoring hobby. It's always a good roundtable of information exchange.

2416. Re: NYC frequencies

IFB stands for Interruptable feedback. In other words, the studios audio is transmitted on that frequency and the director has the the opportunity to override theat audio with his own transmissions. This is used so various camera operators and reporters can monitor the shows progress and receive cues from the director on when they are about to go live or what they should do next. I monitor the IFB freq for WNBC News Four Live in New York City and you can hear the program and the director bark out orders to the Chopper 4 helicopter and the remote reporter locations. Interesting. Give it a scan !!!!

The MRF899 will produce 150 watts. That power is commonplace in
the 938-932mhz paging band, and it will go down 10mhz without thinking.
How do you think they get all those 900 pagers to work in basements.

CM>Anybody know?

This is the NEW, New Jersey law for a scanner in a motor vehicular.
This law PAST into law
Chapter 432 laws of NJ 1991
Approved 1-18-92

It means if you are NOT doing a crime you can have a scanner in your auto..
a review of this law see The New York Times March 1, 1992.
==========
SENATE, No 305

STATE OF NEW JERSEY

Pre-filed for introduction in the 1990 session.
By Senator LYNCH and Assemblywoman FORD

An Act concerning interception of certain messages
suplementing Title 2c of the New Jersey Statutes and
repealing P.L.1977, c.426

Be IT Enacted by the Senate and General Assembly of the
State of New Jersey.
1. Any person who intercepts any message or transmission
made on or over any police, fire or emergency medical
communications systems, or any person who is the recipient of
information so intercepted, and 1who1 uses the information
obtained thereby to facilitate
the commission of or the attempt to commit 1 a crime or 1
a violation of 1 any law of this State, or uses the same
in a manner which interferes with the discharge of police
operations, shall be guilty of a crime of the fourth degree.
2. Any person who, while in the course of committing or
attempting to commit a crime, including the immediate flight
therefrom,possesses or controls a radio capable of receiving any
message or transmission made on or over any police,fire or
emergency medical communications system, shall be guilty of a
crime of the fourth degree.1
3. For purposes of P.L. ,c (C.)(now pending before the
Legislature as this bill), the term "police,fire or emergency
medical communications system" shall not include radar devices
used to monitor vehicular speed 1
1[2.]4.1 P.L.1977,c426 (C.2A:127-4) is repealed.
1[3.]5.1 This act shall take effect immediately.

PUBLIC SAFETY
Establishes standards regarding interception of police,fire or
emergency medical messages and repeals P.L.1977, c.426.

In fact, there was a news photog, I believe in Texas, a while back who was prosecuting for doing this very thing. I don't recall the details but evidently he was broadcasting obscene messages to drive thru patrons. He also made other sorts of offensive remarks. The manager called the FBI and he was arrested. He lost his job too for using the radio (I think it was radio) broadcaster's ham and scanner equipment for unauthorized purposes.

We use PURC5000s (based on the MSF5000) on 929.xxx at over 100 watts for paging. We align them at 160W and then back them off to licensed power. I beleive they are available versions over 200W. There are also PURCs designed from Micors that can do about the same. Big, heavy and expensive amps.

Oh great. Oh great. So now you've got someone who will in all likelihood go right back up to 80 as soon as it's clear that it was a false alarm... only now he's more aggravated than before, maybe even angry. Sounds like a net loss to me.

FYI, 80 is the top end of the standard crusing speed range on I-5 through most of middle California. And the CHP doesn't get state funding for radar, so most of us don't have radar detectors. So you can fire away and you'll be the one aggravated, since there will be no response. And if you're hanging out in the left lane doing the posted limit of 65, and you DON'T pull over when faster traffic comes up behind you, that's a violation and in all likelihood YOU will be the one ticketed. I've seen it happen -- often.

Subj: PRO-51 cellular trick Section: VHF/UHF Scanning
From: Howard Bornstein 76174,637 # 273839, 1 Reply
To: All Date: 02-Jun-94 05:47

There is an interesting test mode in the PRO-51 that, combined with the
direct search feature of the scanner, lets you pick up out-of-band
frequencies. You will have full access to the 66-88 Mhz ranges as well as
the cellular base range of 869-896 Mhz.

Actually, there are several test modes in the PRO-51 (most of these
comments should be true for any Uniden-made Radio Shack scanner, such as
the PRO-46). I'll describe them first and then how to take advantage of
one of them to get the restricted frequencies.

There are three data test modes. These modes completely destroy any
frequencies you had programmed into your scanner, so it's best to use
these techniques before you program your scanner. If you have already
programmed it, you'll have to decide if these new capabilities are worth
reprogramming.

Test mode 0. Clear the scanner.

A well-known method of clearing the scanner to all zeros is to hold down
the 2 key, the 9 key, and turn on the scanner. All frequencies will be
lost.

TEST MODE 1. Fill channels 1-25 with test frequencies.

Press the 2 key, the 9 key, the L/Out key, and turn on the scanner.

This fills channels 1-25 with these frequencies:

1 30.050
2 40.840
3 49.900
4 138.150
5 162.400
6 173.225
7 406.875
8 453.250
9 511.9125
10 108.500
11 118.800
12 127.175
13 135.500
14 66.450*
15 76.825*
16 87.425*
17 157.800
18 482.3625
19 29.000
20 54.000
21 806.000
22 857.200
23 888.96*
24 911.500
25 954.9125

* indicates not within the PRO-51's normal coverage. More on how to use these in a minute.

TEST MODE 2. Fill channels 1-17 with test frequencies.

Press 2, 9, Manual

Fills channels 1-17 with these frequencies:

30.00, 40.00, 50.00, 140.00, 155.00, 170.00, 410.00, 460.00, 510.00,
54.00,
109.00, 118.00, 127.00, 135.00, 810.00, 860.00, 950.00.

There is also a display diagnotic mode.

Display Test Mode.

Press 2, 9, Band or 2, 9, Moni.

This put the display in test mode. Every annunciator and every digit element is turned on in a scan from the left side of the display to the right. To keep this test mode continuous, release the buttons before the first scan finishes. This mode does not affect stored memory. Press any key to exit this display mode.

Now, if you've decided to try test mode 1, you will find several out-of-band frequencies stored in your memory channels. Channels 14-16 hold frequencies in the blocked out 66-88 Mhz range, and channel 23 holds

a frequency in the blocked out cellular base range. Once you have these frequencies stored in a memory channel, the PRO-51's direct search feature will let you search though these ranges. In the cellular band, the scanner searches in the correct 30 Khz steps.

You don't have to keep these frequencies in these channels. You can move them to any channel in the scanner. First move them to a monitor channel.

While on a channel with one of these frequencies, open squelch completely. Press direct search button, either up or down. The direct search button puts the scanner into search mode and the open squelch holds the frequency. Then press the Monitor button. The frequency is now in the monitor channel indicated in the display.

Now you can move it to any regular memory channel in the scanner.

Enter the channel number
Press PROG
Press Monitor
Press the number of the monitor channel if the proper channel is not displayed
Press E(nter)

The frequency is now permanently stored in the memory channel. You can do a direct search from this memory channel at any time.

The 66-88 Mhz range mainly covers TV audio. However, there is a strange phenomenon concerning TV audio and the PRO-51. Channels 4, 5, and 6 audio fall within the 66-88 Mhz range, yet the PRO-51 will not pick up the audio frequency while searching in this range. However, TV channel 2 audio is at 59.75 Mhz. When you add the intermediate frequency of 21.6 Mhz, you get an image of the TV channel 2 audio appearing at 81.35 Mhz. This does come in, although raspy, since the PRO-51 is receiving in narrow FM mode while TV audio requires wide band FM mode for proper reception.

I'd be interested in anyone can verify that any of these test modes work on the PRO-46 or any other Uniden-made Radio Shack scanner.

Funny, I thought that in California you were supposed to ZAP the
DRIVER !
Well, here in NJ I had a blast today zapping cars. It's sooooo fun!!
It's immature, aggravating to the driver, ignorant, stupid, a safety
problem, etc BUT IT'S SO FUN !!!
Here on the Garden State Parkway, the "normal" speed is probably around
70 or so. I had 'em going 55. The local police endorse the zapper.
Gosh, everybody was late getting to the shore cause of me, they lost
valuable gambling time, late to weddings...man I'm so ashamed of myself.
I'll probably resort to some sort of drug therapy and wind up a
bigger loser than I am now. ZAPPER HAS RUINED MY LIFE...don't buy
it fellas you'll wind up like me.

2442. Re: Battery Drain on BC2500XLT w/ unit off

>Does anyone know which specific resistor is this load resistor, or am I
>way out in left field on this one. Your comments would be appreciated.

You're absolutely right...the old versions of the BC2500XLT have a
definite problem with battery drain with the radio on or off...

I know Monitoring Times has documented the necessary battery repair
modification, but an almost easier method for getting the modification
done is to send the 2500XLT direct to Uniden for repair. I suggest not to
call the 800 number for Uniden since they will offer absolutely no help in
identifying if you have the older model of 2500XLT.

Their instructions...send the radio with a description of your problem to
Uniden America, Parts and Service Division, 8707 North by Northeast
Boulevard, Indianapolis, IN 46250.

I shipped my radio (from Detroit) and received it back in 8 days! Radio
came back with a battery enhancement modification, an alignment, and a new
battery pack!

I can't complain, service was great and I'm pleased with the performance
of the radio...however, note, this is only for the very early production
runs of the 2500XLT. Maybe someone else on the net can remember which
serial numbers this modification was needed?

I'm in the Austin area, and I'm trying to find a business frequency that I know is out there. I know it works off a repeater somewhere in the 460-450 range (what's that range called anyway?) Anyone have this range broken down by repeaters, whatever? I have something similar for the HAM band ~140-150, just wondering if something similar exists for UHF. Oh, I also know that the repeater is owned by Motorola (aren't they all?...)

thanks,
mike

I remember reading that posting, too, about the UFO landing. I
also remember that reading that the British police don't bother peple
with scanners, unless they are being really obvious about it (like
checking out the UFO landing site, or gawking at the scene of the crime).

: IM>out the cellular calls. Anyone else has this problem in this area or
: IM>any other part of the country?

: IM>Thanks for any suggestions, comments, or help,

: IM>Sam

: this is a fairly annoying problem, but unfortunately with your typical
: double conversion type scanner, you're gonna run into it quite a bit.
: the only thing you can really do is have some sort of filter that blanks
: out the 870-890 range, but i know of none on the market. the only other
: thing that you could really do (if you're rich and have $$ to burn) is
: purchase the type of radio orange county uses for their fire dept and go
: beg the county to program it for you.

: i live in san jose, and the cellular coverage up here is so good that it
: kills all the weak 800MHz signals up here that i like to listen to, such
: as AMR west (medics), and caltrans and the whole lot. no scanner is
: selective or sensitive enough to pull out all the stuff i want and hold
: back the cellular garbage. i finally got fed up enough and grabbed an
: older (late 80's model) motorola mtx 200+ channel trunking /
: conventional handheld and had it programmed up for the stuff by my
: friend. everything now comes in crystal clear, but the radio cost me
: over $600. quite a price to pay for good 800MHz reception.

From: marc_k@escape.com
Message-ID: <3p22f9$eru@beyond.escape.com>
Source record: 256722

Knowing the inputs can be useful...for one thing, in some situations you might not want to hear all the traffic on say, the main police frequency..after all, it has a tendancy to "hold" your scanner on one channel.
However, if you listen to the input, you will hear the REALLY local stuff-once you hear something, THEN you listen to the output.
Knowing the input is also useful if someone is jamming the repeater, or someone has a "stuck mike".
Again, if you are local enough, you can still listen.
Hams often use the same principle of listening to the input to get an idea where a jammer is, and also, if a long-winded user "times out" the repeater, sometimes you can hear the rest of the transmission if you listen to the repeater input.
So you see, there ARE legitimate reasons for scanner guides to publish inputs.

2459. Up to $50,000 -- amazingly IT WORKS!

PLEASE LISTEN BEFORE YOU START FLAMING ME. I THOUGHT THESE
THINGS WERE SCAMS ALSO BUT IN THE LAST WEEK I RECEIVED
$50,000 IN THE MAIL FROM PEOPLE AROUND THE WORLD. I DON'T
KNOW ABOUT PYRAMID SCHEMES OR ANYTHING LIKE THAT BUT I DO
KNOW I MADE $50,000 AND ALL I GAVE WAS 5 MEASLY BUCKS. I WANT
OTHER PEOPLE TO JOIN IN MY GOOD FORTUNE!!!
-A satisfied customer!

INSTRUCTIONS

Follow these instructions EXACTLY, and in 20 to 60 days you will
have received over 50,000.00 dollars IN CASH.

[1] Immediately mail $1.00 to the first 5 names listed below,
starting at number 1 through number 5. SEND CASH ONLY. (Total
investment: $5.00 + postage) >ENCLOSE A LETTER WITH A NOTE
SAYING:
"Please add my name to your mailing list". Include your name
and mailing address. This is a legitimate service that you are
requesting and you are paying $1.00 for this service.

[2] Remove the name that appears as number 1 on the list. Move
the other 9 names up one position (Number 2 becomes number 1,
number 3 becomes number 2, and so on). Place your name, address,
and zip code in the number 10 position.

[3] With your name in the number 10 position, upload this ENTIRE
file to 15 (Fifteen) different bulletin boards (local or
out-of-state). You may post it to the BBS's message base or to
the file section. Name it FASTCASH.TXT, and use the file
description comments to draw attention to this file and its
great potential for all of us.

[4] Within 60 days you will receive over $50,000.00 in CASH.
Keep a copy of this file for yourself so that you can use it
again and again whenever you need money. As soon as yu mail out
these letters you are automatically in the mail order business.
People will be sending YOU $1.00 to be placed on your mailing
list. This list can then be rented to a broker that can be found
in your local yellow pages listings for additional income on a
regular basis.

The list will become more valuable as it grows in size.
This is a service. ** IT IS PERFECTLY LEGAL **
If you have any doubts as to the legality of this service, please
refer to Title 18,h sections 1302 and 1341 of the Postal Lottery

Laws.
NOTE: Make sure that you retain EVERY name and address sent to you, either on computer or hard copy, but do not discard the names and notes that people send to you. This is PROOF that you are truly providing a service, and should the I.R.S. or some other government agency question you, you can provide them with this proof!
Remember, as each post is downloaded and the instructions carefully followed, five members will be reimbursed for their participation as List Developer with $1.00 each. Your name will move up the list geometrically so that when your name reaches the number 5 position you will be receiving thousands of dollars in cash.
REMEMBER - THIS PROGRAM FAILS ONLY IF YOU ARE NOT HONEST -PLEASE!!PLEASE BE HONORABLE...IT DOES WORK! THANK YOU.

10. Todd Downs 100-G Breezewood Dr. Greenville, NC 27858

The following letter was written by a participating member in this program.
****
To those with the COMMON sense to participate in this easy money opportunity:
About six months ago I received the enclosed post in letter form. I ignored it. I received about five more of the same letter within the next two week. I ignored them also. Of course, I was tempted to follow through and dreamed of making thousands, but I was convinced it was just another gimmick and could not possibly work.
I was wrong! About three weeks later I saw this same letter posted on a local bulletin board in Montreal. I liked the idea of giving it a try with my computer. I didn't expect much because I figured, if other people were as skeptical as I, they would not be too quick to part with $5.00. But, I BUY LOTTERY TICKETS WEEKLY IN MY PROVINCE AND HAVE NOTHING TOO SHOW FOR IT BUT TICKET STUBS! This week I decided to look at this as my weekly lottery purchase. I addressed the envelopes and mailed out $1.00 in each as directed. Two weeks went by and I didn't receive anything in the mail. The fourth week rolled around and I couldn't believe what happened! I can not say that I received $50,000.00, but it was definitely well over $35,000.00! For the first time in 10 years I got out of debt. It was great. Of

course, it did not take me long to go through my earnings, so I
am using this excellent money making opportunity once again.
FOLLOW THE INSTRUCTIONS AND GET READY TO ENJOY!
Please send a copy of this letter along with the enclosed
letter so together we can convince people who are skeptical that
this really does work!
Good Luck,
Charles Kust

P.S. Everyone participating in this program keeps track of all
the names from whom they receive money. If you
decide NOT to be HONEST, and NOT to send money to
the first 5 people on the list, you can always be tracked
down and sued, and I'm sure that you DON'T want that.
Well, in any case, we hope that you follow through with
all the instructions in this letter in order to keep this
thing going. If you do, you may expect to start getting
mail from your first clients in less than three weeks.
Good luck, and we hope that you can benefit from this,
just like numerous others from coast to coast, and all
over the world.

Duane, these frequencies are public knowledge. ALL frequencies are public knowledge. All anyone who wants these frequencies has to do to find them is to put in a little time with a scanner, and he has them.
You can't hide frequencies. They just *ARE*. You can encrypt what's ON the frequencies, but you can't hide the frequencies themselves.
We would be a lot better off if we would realize that it's not *THINGS* that are bad, but people. Trying to keep frequencies secret, or guns unavailable, or drugs unavailable, or alcohol unavailable, won't do anything, because the PEOPLE who want to do wrong are still uncontrolled.

The reason I had *thought* about it is because *had* I performed the mod.
It would have taken all of 5 minutes. Why calculate the IF plus cell
phone freq when you can do it with ease. Strictly hypothetical of course.

Hello,
Many stores have data links to thier area or district HQ. Some of
them even have realtime data links from the (POS) point of sale equipment
to keep the brass appraised of what is selling. Sometimes these are used
at predetermined times to send daily sales info to those HQ.
As for monitoring this you would probably just hear the digital data
stream if you can hear that. Not much to monitor here I think.
That is my best offer of an answer for you from here in Baltimore.

Ben,

If you wnat a unit that is hand held and also works great at home I
would highly recommend the Radio Shack pro-62. It is an excellent radio
and is
well within your price range. It goes on sale for $219 often. It even
holds up

extreemly well (in some ways better) against the new higher priced pro-60.

Both these radios are made by GRE which are known for quality but less features. The new pro-26 from radio shack would also be a good choice but is
aout of your price range.

The pro-62 may be the best price-performance unit you can buy, especially when it is on sale.

I am sure some uniden fans will also have some sound advice for you as well.

Good Luck,

Frank Geluso

From: malachai@mcs.net
Message-ID: <3p4cv6$lnd@News1.mcs.com>
Source record: 256629

My girlfriend recently acquired a Ratshack PRO49 scanner
for her birthday. We were wondering if it has any extra
functions (800+, etc).

Here's what I know about this scanner:

RS PRO49
Serial # 45040136
7A4 underneath serial #.
Circuitry - Uniden 1993 (PH-165AB)

1) Any mods for this particular scanner?

2) I've noticed that when you press the '2-9-l/o' se-
quence, an 'L' shows up in the LCD. I haven't the fog-
giest as to what this does, and I couldn't find any
references that would explain it. ???

I've checked the various FTP sites and URL's to no
avail.

Thanks

From: Jan Waechtler <u7224ao@sunmail.lrz-muenchen.de>
Message-ID: <3p3j8t$37q@sunserver.lrz-muenchen.de>
Source record: 256631

I always wondered if I could extend the battery life of my scanner by using earphones instead of the speaker. It seems to me that the two little speakers in the earphones would use "much" less power compared to the larger built-in speaker. I'm sure it makes a difference, but in real life, would it be a second, a minute or maybe ten minutes that I would gain by using earphones ? In other words, when you really depend on one set of batteries, is it worth using earphones ?

Jan

2479. How to obtin frequencies

Newsgroup: rec.radio.scanner
Date: 1995-05-14 00:00:00 UTC
From: jwayda@netcom.com
Message-ID: <jwaydaD8K20s.Kn4@netcom.com>
Source record: 256638

Many of the posts to this newsgroup requesting frequencies could be eliminated if the requestors would purchase a copy of Police Call from their local Radio Shack Store. If you are new to the scanning hobby, you will find many interesting frequencies for Police, Fire, Ambulance, Aircraft, and many other services that are receivable within your local area. If new users would only obtain a copy of Police Call, we could reduce the amount of unnecessary requests for local frequencies by at least 50 percent.

Bob Wilkins n6fri (rwilkins@ccnet.com) wrote:

: We have a similar group now. rec.radio.amateur.info

Hmmm...must have missed that one; will subscribe to it and check it out.

: How about rec.radio.marketplace for new product announcements

: Many of the other large collections of newsgroups have established the
: marketplace group for similar posts. It has been proved quite popular
: with readers, as well as the marketers. One stop shopping.

Either approach would be fine with me. Since there is already a .info
newsgroup, wouldn't it make more sense to simply direct advertisers to the
appropriate newsgroup, instead of wasting the bandwidth (and everyone's
time, surely a more valuable commodity) flaming these vendors? Of course,
there's still the problem of spamming the entire rec.radio.amateur.*
hierarchy.

Hi all,
I just got an AT&T 9100 900MHz cordless phone, it is really great.
I am wondering if anyone has done any mods on these to improve range,
designed a better antenna(external maybe fed by hardline?), etc.
Or if you know of any FTP sites that may have some info...

Thanks!
Rob

>
>In *NO WAY* does the direction of signal flow matter. Antennae are
>*reciprocal* elements.

You haven't been paying attention, Carl. Nowhere did I say anything about antennas or their reciprocity. We're talking about VSWR on a transmission line. The direction of signal flow *does* matter in that case because only a *load* can cause a mismatch that will result in VSWR. Determining which is source and which load are dependent on which way the signal is flowing. If the radio is the source and the antenna the load, that's one thing, and if the antenna is the source and the radio the load, that's something else altogether.

In the first case, a mismatch at the antenna will result in VSWR on the line, but in the second case only a mismatch at the receiver can cause VSWR on the line. The state of match at the antenna is irrelevant to VSWR on the line in the second case. If you *think* for only a second, it should be obvious that VSWR is a function of *forward* and *reverse* voltages. Now if that doesn't imply a *direction*, what the hell does it mean?

I am in Kingston, Ontario - 1 1/2 hours north of Syracuse. Before the Ontario Provincial Police changed frequencies (42.060 dispatch 42.220 mobile) we often picked up skip from Lincoln County, Nebraska and as far south as Georgia in the summer months. An interesting thing about this, however, was that two or three days later, without fail, we would have an incredible heat and then thunderstorms. I sometimes leave those unused frequencies locked in during July and August just to see what the weather is doing.

In general, yes. It depends upon the design of the receiver you are using,
as to how much power is consumed by the circuitry other than the audio
output stage. Certainly in a noisy environment where you might have to
turn up the volume to hear adequately, some power would be conserved by use
of earphones.

If you have any of these radio's R/S/Realistic/Tandy PRO-2004, PRO-2005, PRO-2006, PRO-2026 either the COMSEC SA-78 Trunking Tone Eliminator or the COMSEC SA-80 Noise & Data Silencer will work.

For the Bearcat/Regency/Uniden reciever models: BC-760, BC-800, BC-855. BC-890, BC-950 or the BC-8500 the COSEC SA-78 will work with these units.

They basically mute the scanner at the end of the transmission and allows the scanner to continue without the (GE or Ericcson) tones.

Scanner Master sells both units. You can order a catalog or more information:

ScanMaster@AOL.COM.

Hope this helps you out.

Joe

2496. Opto freq counters?

Newsgroup: rec.radio.scanner
Date: 1995-05-14 00:00:00 UTC
From: smeier@uspto.gov
Message-ID: <3p5843$26o@pioneer.uspto.gov>
Source record: 256655

Was wondering if anyone has experience with the Optoelectronics frequency counters. The Scout runs for $400 and then they have a model that sells for around $120. They way I read the ads the lower end model just stores 3 freqs whereas the Scout stores 50 freqs.

Is that the only difference. Is it really helpful in searching out freqs. Can I drive by the local police tower or a police cruiser and immediately "nail" their frequencies?

Thanks.

I was just wondering how deep in the dark ages i was owning these
two scanners. The PrO-35 was my second scanner, purchased for me by my
father some years back. I bought the 2022 myself a couple years ago to
replace an old bearcat 20 channel base scanner.
Out of curiosity, what would be good replacements for these
scanners? I dont have any scanner mags to look in, and dont know anyone
else in the area to talk to personally. I am also a currently unemployed
college student..any suggested purchases should be between $200-$300.
I am interested mainly in the 150-175mhz, 450-512mhz, and newer
800+mhz trunked frequency areas.
I would appreciate some helpful feedback on what to purchase and
whether or not the scanners i have are actually that bad.
thanks in advance...

---BEN---

p.s.--->might not have internet access after the next two weeks, so any
responses after that might not be seen...not sure yet.

From: rsloane@mhv.net
Message-ID: <3p602k$drq@over.mhv.net>
Source record: 256662

I have recently downloaded a file about "Pro-51 cellular tricks" from the exhange.tlh.fl.us and
attempted to try the suggestions without any luck. The file suggested holding down the 2 key, the 9 key
and the L/Out key at the same time and turning the scanner on. This supposedly would fill the first 25
channels with some frequencies, some of them not within the scanners normal coverage.
I have tried this several times and nothing happens! Is anyone familiar with this "trick" or know why I
am not having success?
The scanner has a code on the back, 11A3 which supposedly is old enough to allow these or other
"tricks."
Does anyone know of any other mods that apply to the Pro-51 that would allow me to receive some
new frequencies not in the scanner's normal range? Thanks for the help.

2504. Bearcat BCT-7 receives cellular

Look, here's the deal. I am NOT going to give you specific
citations regarding where it says it is illegal, you could call your
local FCC field office. I am afraid I do not have a copy of FCC
regulations on me. However... I will respond to some of the things you say:

As for these devices being sold openly:

The Mirage 2001, Spirit, Mirage 2000, and the like do NOT
count. The reason they are legal is basically because they don't work.
In more technical terms, the devices do NOT transmit, they "reflect"
the signal back while adding distortion into the signal. Essentially
speaking the amount of noise added to the returned signal is probably
less than 1 dB at best and therefore these devices are neither illegal
nor non-functional.
There are some active radar jammers, which actually do
transmit. However, they only put out 5mW, that's 20dB less than
a police radar does. I have difficulty believing that such devices
would work very well, and impartial testing have found them only
somewhat effective. What's more a number of people (including
unofficial statements from the FCC) have suggested that the use
of such a device is illegal for the simple reason that they transmit.
They are still more certainly illegal for interfering with police
radar.
"Zapper" devices are rarely sold as complete devices. They
are almost always sold as kits. As such, it is fully legal. The
only problem is when you sell a completed device. Further, if you
are not a dealer, I suspect selling a completed device is perfectly
legal. This is just way the law works, and there is no reason to
suggest that that means usage of the device is legal. It's legal
to own a gun (in some cases) but it is rarely legal to shoot someone
with it.

Now, regarding your issues of is it legal to transmit period.
It is blatantly illegal to cause malicious interference to someone who
has more precedence to a frequency than you, and questionably illegal to
cause interference to someone who has less. Something tells me that,
you, as an totally unlicensed citizen have more precedence to X-band
radar frequencies than an X-band radar gun. An example of this is the
LoJack system. LoJack, and cordless phones share the 902-938 MHz band
with amateur radio operators. The primary owner of the band is LoJack,
followed by hams, followed by cordless. That means that if a ham were to
intentionally cause interference to Lojack that is HIGHLY illegal, even
though they are allowed to transmit on that frequency.

The point is this... Even if it is legal for you to operate the device. If you were to interfere with any licensed device you would be breaking the law. I seriously question your statements that such a device is legal to begin with however. The makers of the few active radar jammers I have seen limit their power to 5mW, which they claim to be the FCC legal limit for an unlicensed transmitter, quite frankly, I don't really believe it.

dan

The reason I had *thought* about it is because *had* I performed the mod.
It would have taken all of 5 minutes. Why calculate the IF plus cell
phone freq when you can do it with ease. Strictly hypothetical of course.

Hello,
Many stores have data links to thier area or district HQ. Some of
them even have realtime data links from the (POS) point of sale equipment
to keep the brass appraised of what is selling. Sometimes these are used
at predetermined times to send daily sales info to those HQ.
As for monitoring this you would probably just hear the digital data
stream if you can hear that. Not much to monitor here I think.
That is my best offer of an answer for you from here in Baltimore.
73,
and good monitoring,
Tony
Kobylski

Ben,

If you wnat a unit that is hand held and also works great at home I
would highly recommend the Radio Shack pro-62. It is an excellent radio and is
well within your price range. It goes on sale for $219 often. It even holds up
extreemly well (in some ways better) against the new higher priced pro-60.
Both these radios are made by GRE which are known for quality but less
features. The new pro-26 from radio shack would also be a good choice but is
aout of your price range.

The pro-62 may be the best price-performance unit you can buy,
especially when it is on sale.

I am sure some uniden fans will also have some sound advice for you as well.

Good Luck,

Frank Geluso

The thing is, about the only thing you can vary in a scanner is the volume. I am sure that if you live in a low activity area, the scanner runs longer on a charge because less audio is put out. In a busy area, the audio is used a lot, and draws more current. A local dealer here in the NYC area (very busy, as you would imagine) routinely opens the case of any handheld scanner he sells and boosts the audio output but turning a pot inside. In a noisy area, you need more audio, but he does caution the customer that battery life will be shorter. I think headphones will save battery life in they enable you to turn the volume way down - depends on the noise level in your environment!
For the car, I highly recommend an external amplified speaker (like Radio Shack sells). This will give much better audio, and extend battery life, since the radio volume is turned way down (in fact, no speaker draw at all!). I get around 8 - 9 hours on a charge on my AOR 1000 using the external amplified speaker.

-=> Quoting Richard@larry.wyvern.com to All <=-

Ri> The manual for the BC300xlt says that the battery charges
Ri> in 14 to 16 hours. How long can I leave the scanner
Ri> connected to the charger after the 16 hours? Can I run
Ri> the scanner at home while connected to the charger for
Ri> long periods of time?

You can leave it on the charger for longer than 16 hours, but I wouldn't go longer than 24 hours or so. It's not the circuitry that needs to be concerned about...it's the ni-cad batteries. Ni-cads can be overcharged and damage to the pack may occur due to overheating.

Ri> I called the 800 number for Uniden to ask this
Ri> question about running the scanner on the charger
Ri> at home for long periods of time. The person
Ri> to whom I talked said something like, "Oh, lots
Ri> of people try to cheat and avoid buying a second
Ri> scanner for use at home. Running the BC3000xlt
Ri> for long periods at home on the charger will
Ri> burn up the circuits. Well, it won't exactly
Ri> burn up the circuits but little pieces of dust
Ri> get inside the unit. They will get baked by
Ri> continuous operation on the charger and cause
Ri> electrical problems in the circuits."

Yeah, right. Sounds like the person you talked to needs to get a clue...<g>

Ri> So, is there any way to safely run the BC300xlt off of
Ri> A/C power for extended periods of time?

Ri> P.S. Does the unit recharge while using the auto adapter?

Just remember to disconnect the adapter after a listening session and you should be OK. The batteries will be recharging when connected to the AC adapter or the auto adapter.

Well, here's a news flash for you: THEY ARE NOT THE SAME!

The UK and Canadian versions do not come blocked. According to U.S. law, the scanners sold here ARE blocked.

If you buy the 8000 in Canada, you don't have to transfer the freqs. from someone's unblocked radio, nor do you have to program unblocked freqs. yourself with software. From the minute you turn it on, you scan these bands.

2518. 300 Khz receiver for GPS differential

Newsgroup: rec.radio.scanner
Date: 1995-05-15 00:00:00 UTC
From: kirk@neptune.gsfc.nasa.gov
Message-ID: <3p827r$cah@post.gsfc.nasa.gov>
Source record: 256533
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.shortwave,rec.radio.scanner

The Coast guard is starting to broadcast differential correction signals for GPS navigation around the US coast. With that signal, your $300 GPS can correct its real time position from about 100 yards accuracy down to less than 10 yards accuracy. (The GPS signal itself is intentionally degraded by the Air Force to 100 yards to confuse Russian missles - the Coast Guard's differential correction merely brings it back. You figure.)

The catch is that the Coast Guard is broadcasting these corrections at around 300 Khz instead of a more sensible VHF that anyone could copy. (I'm convinced they have a warehouse full of old LF/MF xmtrs that they have left over from the old marine radiobeacon days).

Anyway, there are a couple of manufacturers selling little receivers to capture the Coast Guard broadcasts into the GPS, but at outlandish prices, more expensive than a cheap GPS by itself. My question is, does anyone know where to get plans to build a cheap, single freq 300 Khz receiver to feed into a TNC? Or is it cheaper & easier to get an old beacon rcvr or RDF at surplus or a swapmeet?

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA. It
tells where you can buy your first scanner, what features
it should have, where to get it repaired if required, how
to get frequency information, and mentions a few scanner
clubs worth joining.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire |
engines, ambulances, airplanes, armored cars, trains, |
taxis, and buses are all equipped with radios and you can
listen to them. You can monitor the local sheriff and fire
departments to hear about events "as they happen," before
the news reporters hear about them. Hostage dramas, bank
robberies, car crashes, chemical spills, neighbor and |
domestic disputes, tornado sightings are all fair game. In
a single afternoon, you can hear a high speed police chase,
Drug Enforcement agents on a sting operation, and
undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss
strategy with his advisor from a 415 MHz radiophone in Air
Force 1, or a team of G-men protect him while transmitting
in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you
can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many | midwesterners monitor the state police and and county | sheriff to learn of approaching tornados long before | warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter. *

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. A new law outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack | scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often poor.

Deluxe scanners can be controlled by a personal computer, although this feature isn't important to many scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are undesireable due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly

reduces image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden replacement models, the BC9000XLT and BC3000XLT, work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 has recently been replaced by the 1000 channel PRO-2035. The portable Radio Shack PRO-62 | and PRO-26 are good performers. All four models employ up | conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring | shaped) antenna, covered by rubber. Although it is small and tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to | cause scanner damage due to static charge buildup because | they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high

frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155.

- National Tower Company, PO Box 15417, Shawnee Mission, KS 66215. Telephone (913)888-8864.

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606. |

- Amateur Electronics Supply (Milwaukee, WI). Telephone | (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, * garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

If you are handy with a soldering iron, you may be interested in modifying your scanner to add features or enhance its performance. Be warned this usually voids your | warranty and current models are difficult to service due to | the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

ftp.cs.buffalo.edu
garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here are least two companies which repair scanners:

1. Electronic Repair Centers (telephone 708-455-5105) - Several people have been pleased with good repair service from Electronic Repair Centers in Franklin Park, Illinois. Although they are not authorized to perform warranty work, this outfit has been repairing Bearcat scanners for several years. They charge a flat rate of fixing scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

2. G & G Communications (telephone 716-768-8151) - This | family owned company repairs scanners and pagers and | stocks parts for several older models. G & G cannot | usually repair AOR scanners due to lack of | manufacturer support. G & G sells and sometimes buys | old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Radio Guide, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new 3rd edition is expected in early 1995. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains

detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and Kneitel's sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. It may disappoint experienced scanner hobbyists and is better suited for beginners. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains | a handful of fields for every FCC license in the US. The | Spring 1995 edition works in DOS, Windows, and Mac | environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the | same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts | and companies across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of | your choice, in any state, and produce a custom | RadioMap(TM) report, including an 8-1/2" by 11" scaled | color map, protected by plastic. The map is marked with | transmitter sites, cities, highways, airports, military installations, national parks, etc. *

RadioMap allows you to identify antenna sites and visualize | the transmitter locations in your neighborhood, near your | office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and | licensee names. RadioMap covers police, fire, local | government, TV, business, industry, common carrier, | railroad, trucking, and many more types of transmitter | sites, excluding ham radio stations. Wireline and | nonwireline cellular phone and AM/FM broadcast transmitter | sites are clearly marked using unique color icons.

RadioMap has been very favorably reviewed in RCMA Scanner * Journal, American Scannergram, and USSN. Industrial | customers use RadioMap reports to survey the "radio | environment" prior to installation of radios and wireless | microphones at customer sites. RadioMap is also used to | find sources intermod interference problems.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the * locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I | choose the range, depending on transmitter site density: |

suburbs: 5 mile range (100 sq. mi. area) |
rural areas: 10 or more miles (400 sq. mi. area) |

dense urban area: 1 - 2 mile range |

Longer ranges for additional charge - call for pricing. |

A custom RadioMap report costs $20.95 plus $5.00 shipping |
and handling. Send $25.95 (check or money order payable to |
Bob Parnass) for each RadioMap report, your name, address,
and telephone number, along with center location (nearest
intersection of 2 streets, or latitude & longitude) to: Bob
Parnass, 2350 Douglas Road, Oswego, IL 60543. tel.
708-554-3839 6-10 PM central time. For a brochure, send |
SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time,
you'll want to know who you're hearing.

Although FCC rules require radio users to identify their
operations with their assigned call letters, most ignore
the regulation. This often makes it difficult to know who
is transmitting. Moreover, many radios are now being
placed in service illegally, without first obtaining the
required FCC license.

There is a challenge in deriving new spectrum usage
information on your own. Sometimes it requires several
days of listening, taping, and compiling fragments of
information. Other times, the frequency information is
there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and
try to determine who's transmitting and what purpose
the channel serves. Once you identify the user, log
the information.

2. Compile first: Take advantage of opportunities, such
as examining the frequency label on a guard's radio,
or reading the FCC license hanging on the "radio
room" wall, to compile frequency lists, then monitor
the listed frequencies to confirm that they are
really in use. Readers are urged to abide by the
rules of good taste and local laws in the quest for
frequency information. Don't trespass, wait for an
invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found
the actual FCC radio license, complete with frequency
assignments, hanging on the walls of places like the mall
security office or company guard shack. You can examine

the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are $24.00 per year, which includes the monthly RCMA Journal, which consists of approximately 95 pages. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

AOSC questions can also be sent electronically to:

rccons!aosc_hq@telerama.pgh.pa.us or
dave.marshall@f240.n108.z1.fidonet.org.
FidoNet: 1:108/240.0

AOSC also has a MEMBERS & EDITORS Scanner related echo, AOSCNet, distributed via FTN on 6 BBS systems, and via Internet Mailing list. For info on the ECHO only, contact:

R.E. Christian, AOSC PA/AOSCNet Founder
PO BOX 12763,
Pittsburgh PA 15241-0763.
FAX: 412-831-5860.

Internet: rccons!aosc_pa@telerama.pgh.pa.us
rccons!aoscnet_hq@telerama.pgh.pa.us
rick.christian@f220.n129.z1.fidonet.org
FidoNet: 1:129/220.0

To receive a file of info on the All Ohio Scanner Club via Internet send to: rccons!ftpmail@telerama.pgh.pa.us

In body: get aoscinfo.zip

This will send a UUENCODED info packet to you. The file contains an outline of the material you will find in the American Scannergram, the AOSCNet, and an application for membership. (Note: This file will not be sent back to *.fidonet.org addresses.)

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, most at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

The Command Post
attn. Kim & Ted Moran
6143 W. Touhy Avenue
Chicago, IL 60646

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 | annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

Here is a tentative meeting schedule for 1995. All
meetings will be held on Saturdays at locations announced
in advance.

February 18, 1995 - Westmont Police Dept.
April 15 - Winnetka |
June 17 - Naperville EOC(?) |
August 19
October 14
December 16

Bring a notebook and your appetite.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

I am often asked, "How do you find these frequencies?"
Scanner enthusiasts can obtain frequency information from
several sources, including books, government microfiche
records, or other listeners.

Books

The most convenient source of fire and police frequencies
is the Police Call Radio Guide, published each year in 9
regional volumes by Hollins Radio Data, and sold at Radio
Shack and larger book stores for under $10. Police Call is
basically a computer printout of FCC license information in
the fire, police, local government, and conservation
services in two lists: by licensee name within state, and
by frequency. Later editions have included a few pages of
local airport and nonsensitive federal government
frequencies.

I highly recommend Richard Barnett's 1992 book, Monitor
America, published by Scanner Master Corp. A 3rd edition
is expected soon and will be available from Grove
Enterprises for about $30. This second edition is crammed
full of police, fire, local government, news media, sports,
national park, and commercial broadcast frequencies for all
50 states. The information was compiled mainly from
members of the world's largest scanning club, the Radio
Communications Monitoring Association (RCMA). Monitor
America contains detailed communications system profiles
and precinct maps for major metropolitan areas. Police and
fire radio codes and unit identifiers unique to local
agencies are listed for several cities. This differs from
Police Call, which gives a more sterile, but uniform

treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Beyond Police Call, available from several sources including Radio Shack, covers the business, schools, and other stations not covered by Police Call, its sister publication. One volume covers the entire USA, but no call signs are shown.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The second edition is about 400 pages and is available from Official Scanner Guide. The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac |
environments.

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts |
and companies across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of |
your choice, in any state, and produce a custom |
RadioMap(TM) report, including an 8-1/2" by 11" scaled |
color map, protected by plastic. The map is marked with |
transmitter sites, cities, highways, airports, military |

installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize | the transmitter locations in your neighborhood, near your | office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and | licensee names. RadioMap covers police, fire, local | government, TV, business, industry, common carrier, | railroad, trucking, and many more types of transmitter | sites, excluding ham radio stations. Wireline and | nonwireline cellular phone and AM/FM broadcast transmitter | sites are clearly marked using unique color icons.

RadioMap has been very favorably reviewed in RCMA Scanner * Journal, American Scannergram, and USSN. Industrial | customers use RadioMap reports to survey the "radio | environment" prior to installation of radios and wireless | microphones at customer sites. RadioMap is also used to | find sources intermod interference problems.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the * locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I | choose the range, depending on transmitter site density: |

suburbs: 5 mile range (100 sq. mi. area) |
rural areas: 10 or more miles (400 sq. mi. area) |
dense urban area: 1 - 2 mile range |

Longer ranges for additional charge - call for pricing. |

A custom RadioMap report costs $20.95 plus $5.00 shipping | and handling. Send $25.95 (check or money order payable to | Bob Parnass) for each RadioMap report, your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. 708-554-3839 6-10 PM central time. For a brochure, send | SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA)1. Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel

(e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'2.

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are collected annually, which covers a monthly newsletter, the RCMA Scanner Journal, about 95 pages long. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. A recent liberalization of club policy now permits the printing of most federal law enforcement frequencies, e.g., Secret Service, FBI, Customs, and DEA.

Inquiries about RCMA membership should be sent to:

RCMA General Manager
P.O. Box 542

Silverado, CA 92676
USA

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

The real challenge is deriving new spectrum usage information. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

More about sleuthing will be discussed in Part II of this article.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?
Part 2: Sleuthing

by Bob Parnass, AJ9S

Part I of this series discussed how scanner enthusiasts can obtain frequency information from books, government microfiche records, or other listeners. This installment discusses digging up new frequencies on your own.

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio

room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are

mumbled, I can play and replay the tape until I hear and understand them.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist

called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described in Part I of this article, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to

determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their

transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

Anybody with enough money can buy a brand new scanner, but you can save lots of money if you get a good deal on a used scanner. Hamfests are probably the best place to find used radios, but you must be familiar with the equipment. Hamfests are repleat with older radios you won't see in today's catalogs.

At last count, there were over 70 scanners and monitor receivers of various brands in my collection. I purchase most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Several people have been pleased with Electronic Repair Center, in Franklin Park, IL, which repairs scanners for a flat fee. Call them at (708)455-5105 to find out their current rates. G & G Communications (telephone 716-768- | 8151) is another scanner repair company. This family owned company repairs scanners and stocks parts and crystals for | several older models. They usually don't repair AOR | scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series. Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Bearcat BC-101, Radio Shack COMP 100, and Tennelec MCP-1, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

Radio Shack scanners contain a reasonable number of features. All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. A few years ago, the Regency and Bearcat scanner lines were purchased by Uniden, a Japanese company, and production was moved to Asia.

My favorite VHF/UHF receivers are the 400 channel Radio Shack PRO-2005 and PRO-2006, the Uniden/Bearcat BC9000XLT, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the Radio Shack PRO-43 and Uniden/Bearcat BC3000XLT.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

ICOM

R-7000: At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but has better IF filtering and contains front-end circuitry for VHF-low, VHF-high, and UHF bands. No aircraft band coverage. Three crystal filters. Front mount speaker sounds good. No rescan delay.

Bearcat 12 (Electra): One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

BC101 (Electra): First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC220 (Electra): 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): A BC220 but with 40 channels. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

800XLT (Uniden): 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels.

BC860XLT (Uniden): 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna.

BC9000XLT (Uniden): High quality base using up-conversion. 500 channels in twenty banks. Tuning knob. Selectable AM, NFM, WFM modes. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies.

BC100XLT (Uniden): Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): Excellent 400 channel portable. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable

for each channel.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator

drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except

that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO2004: Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio.

PRO2005: Radio Shack's top of the line scanner for 1989 and scanner of choice. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended.

PRO2006: Radio Shack's 1994 top of the line scanner. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended.

PRO-2035: Radio Shack's 1995 top of the line 1000 channel base scanner. Cumbersome 100 channel bank size. Tuning knob. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over.

PRO34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO2022: Base/mobile scanner. Like the PRO2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission.

PRO2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna.

PRO2037: Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits.

PRO2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack

of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO62: Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43.

PRO43: Good portable 200 channel scanner using up conversion. Covers military air band. Selectable AM/NFM modes. Intermod in 160 - 162 MHz railroad band.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO24: Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2526	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorla Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. The Plectron 500 series is less desireable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Parts for Plectron receivers are available from:

2522. Pro 2032

Newsgroup: rec.radio.scanner
Date: 1995-05-15 00:00:00 UTC
From: gb546@bard.edu
Message-ID: <3p7f9c$s9v@core.bard.edu>
Source record: 256537

I have a RS Pro-2032 that took a line surge and smoked the power supply. When I put 12 vdc to the jack on the back, the display lights, it scans, has audio, squelch noise, but seems a bit deaf.

What's it worth? Anyone want it? Make me an offer (via email, please, not here).
Thanks

Greg Becker NA2N

Good point--and something I forgot that I pointed out in another thread: while
the RF portion may be encrypted, the landline portion will be in the clear.
And that would be easier to tap into.

The inputs to this rptr. will also be encrypted. The repeater is specially set up to repeat this encrypted signal,(not all rptrs. can do this). The only possible clear voice signal intercept one may get is a UHF or microwave uplink from the dispatch. This also may be encrypted, though.

****

I have a PRO-51 with a date code of 7A4. This seems to be the LAST
date coded model that can take the keyboard mod as I have tried it on
later models with NO success.

Try this: (1) First try hold LOCK-OUT, 2 and 9 keys down while turning on
power. Test frequencies should be loaded into the first 25 channels (maybe) .
If channel 23 contains a magic frequency then you can direct search .
****
(2) IF that does NOT work (THIS WILL !!!!!) hold down BAND, 2 and 9 down
while
turning ON power. Now, in the digit test mode, all digits of the LCD will
move slowly from the left
to the right of the display.

(3) When the movement advances nearly to the right end of the display, press
and hold the
LOCK-OUT, 2 and 9 keys until the digit test mode stops...
The display will blink, NOW the radio will begin scanning the factory-preset
frequencies.
Manually step to channel 23, which will display 888.960 MHz, roughly
the middle of the
cellular band. Start a normal, direct search routine from this frequency to
cover the cellular freq's.

(NOTE) This will wipe out all stored frequencies. You will want to keep CH #
23 open , so you can

do your searches up or down from 888.960. Once you search higher than 896.000
, or lower than
869.000 , you will need to manually step to CH # 23 again. (once you search
past those ranges
you need to go back to the middle by going to ch. 23)

After you get the mod complete it is safe to program the scanner back to
wherever you had it, just
keep ch. 23 open for cell.

Hope this was not too confusing. HAPPY SCANNING!! |-))))))))))

The Yupi is a better overall receiver but it won't resume scan until 2
seconds after the signal goes away. This REALLY SUCKS for 800 trunking.
The AR8000 has more bells and whistles and seems to be the front runner
for now.

The Mass State Police systems seem to change by the minute. This is the last
information I had....

A troop

Boston Metro area State Police/Old Metro Police use the 20 channel trunk.
This is now a Motorola type 2 trunk now and is expanding to 28 channels
soon if not already. There are sites all over for this trunk. Framingham and
all boston baracks are on this trunk. Framingham and Boston area baracks will
use low band from time to time. Northern sections of A troop, Concord, Danvers,
Newbury, Peobody,and Andover are still using low band primarily. Andover uses 1
conventional 800 MHZ channel for some traffic. Foxboro is still using low band
also. "A" troop recently re-numbered all of their baracks locations for the
2nd or 3rd time.

D troop

Low band is still in use primarily. There is a small trunk in place and
Dartmouth and Middleboro are using it at times. Other baracks to join shortly.

Coverage is sparce for now, most repeaters are on Coppicut Hill in Fall River. More sites to be added soon.

C troop

Still mostly low band. A trunk is under construction. They have 2 conventional 800 MHZ frequencies that are in use from time to time. They are up on Mt Watchusett in Princeton. Quabbin reservior and Clinton Reservoir use these conventional freqs. also.

B Troop

Mostly low band in Springfield area, berkshires all low band for now. A small trunk is up and running for the Northampton and Springfield areas. The repeaters are on Mt Holyoke in S. Hadley. The repeaters on Mt Massamet in Shelburne are slated to start up next.

In addition, if a transmitting device falls under Part 15 of the
FCC rules covering low power devices, it is legal to use so long as it
does NOT cause interference to *licensed* services. All Part 15 device
users are obligated to tolerate whatever interference is caused TO them,
however.

So I suppose that as long as your "zapper" transmits below some
legal output limit, it will fall under part 15, and consequently
"fuzzbuster" users haven't a bloody thing to say about them.

As always, a consultation with the FCC is probably better than
relying on what you hear on the internet.... :-)

> Now, regarding your issues of is it legal to transmit period.
>It is blatantly illegal to cause malicious interference to someone who
>has more precedence to a frequency than you, and questionably illegal to
>cause interference to someone who has less. Something tells me that,
>you, as an totally unlicensed citizen have more precedence to X-band
>radar frequencies than an X-band radar gun. An example of this is the
>LoJack system. LoJack, and cordless phones share the 902-938 MHz band
>with amateur radio operators. The primary owner of the band is LoJack,
>followed by hams, followed by cordless. That means that if a ham were to
>intentionally cause interference to Lojack that is HIGHLY illegal, even
>though they are allowed to transmit on that frequency.

More or less correct. The primary assignee to a given frequency
band has the most legal bitching rights if it comes down to that.
As far as X-band gear goes, again - if the transmitting device falls under
part 15, I would doubt if licensed/unlicensed is an issue. And
insofar as the FCC goes, I don't know what the status of police radar
equipment is.....I think it may have changed some time back.

I should clarify that "not an issue" thing once more and
say that it isn't an issue as long as you don't interfere with a
licensed and/or primary user of that part of the spectrum.

BUT - that doesn't mean that an individual STATE may or may not
have a law on the books with a title to the effect of "interference with
law enforcement" that can be VERY broadly interpreted as needed. :-)
That that means is that you wouldn't catch *me* trying to actively
jam a police radar with any sort of actively transmitted signal. Now,
applications of radar-absorbing materials or reflective devices -
well, I don't think that is quite as clear cut.

My guess is that this, too, will vary from state to state.

> The point is this... Even if it is legal for you to operate the
>device. If you were to interfere with any licensed device you would be
>breaking the law. I seriously question your statements that such a
>device is legal to begin with however. The makers of the few active
>radar jammers I have seen limit their power to 5mW, which they claim to
>be the FCC legal limit for an unlicensed transmitter, quite frankly, I
>don't really believe it.

Actually, I wouldn't be surprised if 5 mW *is* legal, if you
strictly interpret some section of part 15. Legal to transmit, yes.
Legal to jam police radars, like I said - THAT is another matter
entirely......

Whatever you do - do yourself a favor and DON'T interfere with
a Primary or licensed user. Then it doesn't matter what sub-part of the
FCC rules you fall under. If you get caught, you're toast.

2536. Milwaukee, WI Repeater Links

Newsgroup: rec.radio.scanner
Date: 1995-05-15 00:00:00 UTC
From: helix@solaria.sol.net
Message-ID: <3p841d$bva@solaria.mil.wi.us>
Source record: 256551

I've figured out what the various links are for the Greater Metropolitan Area of Milwaukee, Wisconsin (ya-her-day, eh?) and I feel that these frequencies will be of great benefit to those who've had some trouble getting into the two largest repeaters on VHF within the Milwaukee, WI area.

As these frequencies are listed within the amateur radio spectrum, those who feel that these frequencies should be kept private are badly mistaken as amateur radio is for everyone. Therefore, I am listing these frequencies for everyone's use:

145.130 (output) / 144.530 (input) PL = 127.3 Hz (MAARS):

links are listed below with their guessed locations:

222.270 (output) / 223.870 (input) PL = 127.3 Hz (NW site)
222.290 (output) / 223.890 (input) PL = 127.3 Hz (main site)
222.320 (output) / 223.920 (input) PL = 127.3 Hz (UPS site)
222.340 (output) / 223.940 (input) PL = 127.3 Hz (SW site)

146.910 (output) / 146.310 (input) PL = 127.3 Hz (MRC):

links are listed below with their guessed locations:

446.525 (output) / 446.525 (input) PL = 173.8 Hz (SOUTH site)
446.250 (output) / 446.250 (input) PL = 173.8 Hz (NORTH site)

Enjoy!

Vie carenis ennundum!

2538. Clipper Chip use in new Cordless Phones?

Newsgroup: rec.radio.scanner
Date: 1995-05-15 00:00:00 UTC
From: Brian varine <varine@ece.orst.edu>
Message-ID: <Pine.HPP.3.91.950515112244.2184B-100000@watson.ECE.ORST.EDU>
Source record: 256553

I was reading an engineering article at campus today and they stated that the new 900MHz cordless phones using DSS and a digital encryption scheme are using a Govt approved chip similar to the Clipper chip. Does any one know if this is true? They specifically mentioned some AT&T models (not STU-III types)

For those who don't know what the Clipper chip is. It's a chip that was supposed to go into all kinds of products, including PC's, and encrypt you transmissions. Thus keeping your privacy. You were guaranteed absolute privacy..... Except. The Gov would hold all keys in an escrow accont. If the Govt or any law enforcement agency wanted to tap you phone, they could get your key out of the escrow account and eavesdrop on you. Real privacy.

For those with sound blaster cards, theres a new program called Nautilus that will encrypt your phone conversations.

FTP> ftp.csn.org
go to the /mpj directory and read the instructions in the README file.

If I had a sound blaster card I'd try it out. Get it while you can. The Govt. is trying to get bills passed outlawing "Non-Government Approved" crypto systems, ie. PGP.

: My scanner jumps from the freq's 868.000 to 894.000 . Why is that? and
: is there a way to get those back?

You have been robbed of the cellphone frequencies. You can thank
the cellphone lobby, Congress, and the FCC for deciding what
you can and cannot listen to. Scanners sold in the US today
cannot be modified to receive these frequencies. You can buy
a scanner out of the country, or find a used one that has
been modified.

Aside from that though, you are simply left with a big gap.

Mike

Hello out there!!!

I just bought a Yupiteru MVT 7100 and have a question for all you scanner gurus...

The radio is SIGNIFICANTLY lower (just barely audible) when listening to the Wide FM band...

I called the dealer where I bought it and he claims this is common to most scanners. Is this true? Is this normal for the Yupiteru? I just don't want to get stuck with a dud radio...

THANKS FOR THE HELP!!!!

2544. Yupiteru MVT7100 & TVch 56/60 interference

Newsgroup: rec.radio.scanner
Date: 1995-05-15 00:00:00 UTC
From: mod@world.std.com
Message-ID: <D8n523.D37@world.std.com>
Source record: 256559

Until recently I thought the prohibition against scanners on airliners was overcautious at best, if not just downright ignorant superstition. However, the other night my MVT7100 demonstrated its ability to blow away TV channels 56 and especially 60, at least with my little Sony TV out in my neck of the woods (NE Massachusetts/SE NH). It's clearly only specific combinations of scanned frequencies versus specific TV channels, but the results were spectacular: as my scanner went through its programmed freqs the TV picture rolled, pitched and blinked and the audio snorted and hissed between modem-like tones. I'll definitely not feel abused anymore when I refrain from scanning while airborne! BTW the scanned freqs were ~33Mhz ~150-160Mhz and ~450-480Mhz - I didn't narrow it down to which particular scanned freq was on the display at the time the interference occurred.

Regards,

Michael O'Donnell mod@std.com

: I don't understand why you don't think you can use the charger. That's
: what its for. The car adaptor for the cig. lighter is a straight plug,
: no converter, so it's 12v. Same with the 110vregulator. It converts to
: 12v. So can't you use it?

: TTFN

: -Steven

I run mine a lot of the time with batterys in and the charger on. I have used the car cig. lighter adapter with the batterys in and did notice that the 8000 got quite warm.

I hope I am not damaging the 8000 this way but I didn't see anything in the book about NOT running off the charger when batterys are in.

IM>would use an NMO mount.

IM>Thanks,

IM>Sam

yes! try the antenna specialist mon-57 (or the new version, forget what
model number if it's different, but it has an 800MHz load of some kind
just below the main load). if you remove one of the rings at the base
of the connector, you can use it with an NMO mount.

last i checked, they were going for around $35-40.

not sure where to get one these days...

IT>are),

IT>Blaine Brooks
IT>St. Louis , Mo.

what rock did you crawl out of under? lemme ask you this, if you were trying to do some sort of narcotics bust, and the people you were trying to bust had a scanner and were listening to the frequencies you normally use for such activities, don't you think the bust would be a complete waste of time since they could hear everything you're saying?

from the information i have gathered so far, the astro scrambling that lapd uses works just fine on simplex at the moment. many of the repeaters, however, haven't yet been updated for use with the system and don't reliably pass the digitally scrambled signals through properly, making decoding next to impossible. once the repeaters are updated, most of these problems should go away.

last, but not least, you don't even live out here... I DO. unless you have half a clue about the topic, don't speak up.

The factory antenna is a dual band antenna. You can tune the antenna by collapsing the sections. the shortest section the higher the frequecy. The longer the the antenna the lower the frequency. The only problem is, if you shorten
the antenna for the uhf frequencies you might miss some of the action on the lower freq's. The best thing to do is find a length that will accomidate everthing you listen to. 18" is good for a pretty wide range of freq's. Read the owners manual i
n the scanner. Most of the manuals discuss the optimum length for certain ranges.

Digital or Encrypted. The Saber line can do analog and secure digital voice.
The Astro line can to analog/digital and either secure or unsecure (trunking too)

The input will sound exactly like the output freq of the repeater.

Hope this helps. Doug.

I think you have 30 sec after power is removed to get power restored,
after that you're toast. The key is lost so you go out in the clear. In
the Military we get a beep when the mike is keyed if it's secure. No
beep, you're in the clear.

2564. Interesting interference

Newsgroup: rec.radio.scanner
Date: 1995-05-16 00:00:00 UTC
From: dlarson@UWYO.EDU
Message-ID: <1995May16.202432.11226@roper.uwyo.edu>
Source record: 256483

I had and interesting thing happen today...

I was reading my favorite newsgroups and listening to my Pro-43 scanner
and HTX-202 HT at the same time. I swithched my communications program
from a full screen DOS app to a window in windoze 95 and both radios
went nuts with static!

The HTX-202 stopped on 146.820, 146.610, and 147.015 MHz. The static
wasn't so bad on 147.015 MHz. The Pro-43 stopped only on 155.445 MHz.
I put the scanner on 146.610 MHz that the HTX-202 had problems with
and the scanner didn't do a thing. (Both radios were set so that a
fairly weak signal would break squelch).

Anyhow, the radios were just above the monitor, about a foot to each
side. I never noticed this before but probabally just had the squelch
set too high to break. So why would the Pro-43 not get the
interference on 146.610 Mhz but on 155.445 MHz. Something to do with
triple conversion maybe?

Happy scanning!

They have a better reason than that. The groundwave from the MF transmitters covers a larger area than would a VHF transmitter's LOS signal. Therefore they can use fewer transmitters. Fewer transmitters means fewer maintenance headaches and lower costs.

No, but the cruise missle with the conventional warhead might. This is
why the signal is degraded, to render the data stream unusable for long
range self guided missles of a conventional nature. Some of our cruise
missles use GPS (with the military error correction) for primary
navigation to the target.

Ahh! It's a godsend! Finally an opportunity to get rid of all these ARC-5 rigs that have been piling up in the garage!

But, if you don't want an ARC-5 set (and I think every person in the country _should_ want an ARC-5 set), you can probably just do a quick and dirty direct conversion setup. I think stealing the IF strip out of an AM table radio and detuning it down to 300 KHz by adding more capacitance to the IF cans might do the job nicely.

However, what are you going to do with the baseband when you get it? How is the signal encoded?

I am not exactly sure why you would need them for monitoring purposes
but...

They normally aren't listed in directories because the system operators
aren't required to disclose them. PL tones serve two purposes: they
reduce interference problems in receivers and they control access to the
system.

Keep in mind that some newer systems are using DPL.

You might just ask your local burger fryer if you can look at the radio
hanging on his butt. If it was factory programmed, the PL designator is
probably on the ID plate.

I wouldn't expect law enforcement officials to be giving up their tones.

Uniden BC200/205 Business Band Restoration

Prior to performing this modification take the following precautions to insure that damage does not occur to any component inside of your Uniden scanner.

A) Try to perform the modification in a low static electricity environment.

B) Avoid wearing wool clothing or walking across a carpet (in low humidity areas) as well as touching your scanner or any component inside the chassis.

Required tools: A small phillips screwdriver and a fine-pointed snipping tool.

MODIFICATION PROCEDURE ----------

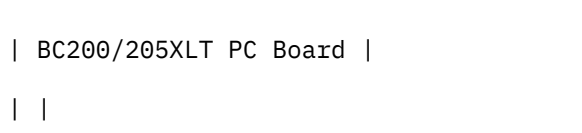
1) Disconnect the antenna and slide off the battery pack from the scanner.

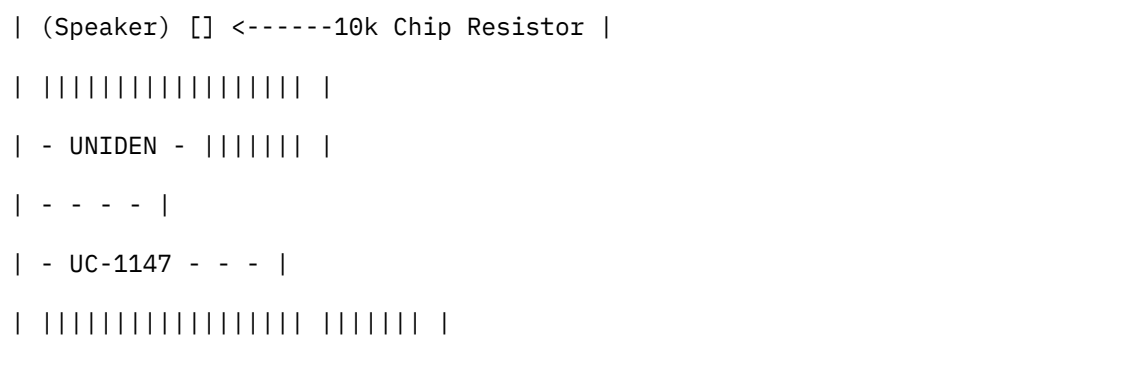
2) Remove the two screws from the back of the scanner plus the two screws that hold the battery pack retaining spring in place as well as the spring itself.

3) Carefully pry the bottom of the rear of the cover from the radio then remove the cover.

4) Locate the two small screws at the base of the circuit board and remove them. Gently pull the front panel from the mainframe at the BASE (the two halves are connected by a plug so their will be some resistance) and separate them.

5) Consult the illustration below and locate the IC labeled "UNIDEN UC-1147" and the 10K chip resistor positioned above the letters "DEN" on the integrated circuit. (The resistor will be color coded brown-black-orange).





6) Using the small wire cutters, cut the resistor in half. (Be careful as the resistor may shatter causing debris to scatter along the PC board). Be sure to remove all left over residue by blowing or brushing it away. The solder pad that the resistor was soldered to may peel up as you remove the resistor. You may peel the pad off if done carefully not to disturb the surrounding area or components.

7) To reassemble insert the top of the front panel into the slot under the volume/squelch control panel while noticing the alignment of the dual in-line connector at the bottom of the board with the mating socket and finally pressing it (the front panel) in place. Be sure that the holes in the PC board line up with the holes in the plastic standoffs under the board.

8) Insert the two screws and gently tighten. Replace the back cover by inserting the top of the cover into the slot under the volume/squelch control panel. Press the cover into place, insert and tighten the screws. Replace the battery retaining sprint with the slotted side facing the notched hole. Insert the two remaining screws and gently tighten them. Slide the battery pack into place and switch the scanner on to make sure the display comes on. If not, check that the battery is charged and/or the battery retainer spring is properly mounted or dual in-line connector was misaligned during reassembly. Assuming the modification and the reassembly was successful, switch the scanner on, press manual, 845.0, E and within a couple of seconds you should see the frequency 845.000 MHz displayed. The modification is now complete!

No, it uses a true digital encryption. You get to picke which algorythm.
You can use Triple DES, but it requires at least a 14.4k modem and a
faster processor. You can use IDEA, which is what PGP uses, need either
9.6K or 14.4K. Or you can use Blowfish which is supposedly the least
secure of the 3, but if you only have a 9.6K and a 386/25 then it's
probably the one you want.
It's a freeware program that is a Beta version for now. In June they'll
release the official version

When you use the 8K for an extended period with the brick plugged in *AND*
the batteries in the unit, it WILL build up heat. You will fry the batteries and
possibly damage the radio/display. There seems to be no problem using the
unit plugged in to the brick with the batteries removed, however.

From: Ron Katz <ronkatz@interlog.com>
Message-ID: <3padbk$66l@steel.interlog.com>
Source record: 256590
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I got a few gun diodes (I think its called) I pointed it to
a radar dectecter hooked up the two wires to the 5 and one
was a 9 volt source and started turning a screw until the
RD went off. It was that simple. Once tuned I moved the signal
source farther away from the RD and started tuning again.

Well now the big test..The road test! I,ve got my 9volt battery
and my visa card to cover the fine after the internet police
contact the local police and bust down my door. I'm sure thay
will talk away my computer, my car, my appartment, heck maybe
even my girlfriend!? But at the end I think it will all be worth it.

Oh I have two one on the K and one Ka band (tuned) The next
step is to up the power and retune a microwave oven!!!!! Well
thats a little too much power but hay why not fry my eye balls
at the same time.

Ron.

In most cases you want to listen to output. As far as getting the freqs
that low you would need to purchase a shortwave radio. No "police
scanners" or other receivers in this catagory carry freqs under 30mhz.

Send E-Mail to: dctrhappy@aol.com
The only thing new is you finding out about it!

Jim Wayda says:
" I live in Yorba Linda, CA. The local police use 460.100 mhz. The
" Huntington Beach police also use the same frequency. I want to monitor
" the YL police but also have to listen to the HB police because they are
" on the same frequency. Do the YL police
" also hear the HB police, or do the mobile radios respond to PL tones to
" eliminate this problem?

Services in Yorba Linda are listed as using a PL tone 156.7 Hz. on 460.100.
460.400 shows a PL of 103.5 Hz.

Huntington Beach is listed as using 103.5 Hz. for the same freq of 460.100.
So, yes, the different PL tones keep the repeaters from interferring with
one another and with the PL activated, the officers of one community do
not hear the traffic from the other.

> upgrade my Scout, or buy an interface. Is it just a cable?

We recently obtained a discount for a client on some AR8000 & Scout 40's combined with some custom software. For just the reaction tuning feature, you should just need a special cable between the AR8000 and Scout. The exact cable depends upon what version of Scout 40 you have... If it is version 3.1 or greater, then you need cable model ARCB; if it is version 3.0 or lower, then you need cable model ARCX; each cable has a list price of $49. (Those cable model numbers should be correct, although I'm quoting them from memory).

Note, that this cable doesn't allow you to download the Scout 40 databanks to a computer. For that you would need an RS-232 interface, model CX12AR (which also allows connecting the AR8000 to a computer). The CX12AR has a list price of $99. There is an older version of this interface with a list price of $89, called the CX12; but this will not work with the AR8000. The CX12AR actually has four ports, so you could hook up a Scout 40, an AR8000, and two other devices with an RS-232 or ICOM CI-V interface.

Hope this helps!

I looked into this last year. My brother-in-law (the cop) says that
speeding is a violation of the motor vehicle code (section 39), not
the criminal code.

I'm still paranoid about carrying my Pro 43 in the car, because most
officers are *still* unaware of the change in the law. I even called
the local sheriff's office in 9/93 and they were unaware of the new
law. I don't want to have to go to court to get my scanner back. Even
if they're wrong, it'll cost me time and money.

Is this a great country or what?

Message-ID: <3pau6j$fit@super8.cec.wustl.edu>
Source record: 256602

On 15 May 95, I took my PRO-43 to Kiel Center in St. Louis, where Game 5 of the NHL Western Conference Quarterfinals series between St. Louis and Vancouver was played. I failed to charge my batteries before this game (duh), so I was unable to scan for long. While scanning during the game, I did come across two frequencies of interest:

464.6125 MHz - Audio from ESPN. The audio primarily featured the announcers doing play-by-play of the local game; however, a voiceover from a producer/director type was also audible.

49.83 MHz - Communication between St. Louis assistant coaches Bob Berry and Ted Sator.

Some of us posted a request for frequencies such as these a few months ago; alas, we got no responses. I'd like to repeat this request. If a Game 7 is played in this series, it would be on Friday night: I will seek more frequencies at that time.

Dear Cabbie
by Homer Melchrome

[Editor's Note: Homer Melchrome is a former New York City cab
driver turned long haul trucker turned advice columnist. "Cabbie"
was his CB handle during his trucking days - he kept the handle,
but now he answers your questions on the subject of driving, both
city and highway.]

Dear Cabbie,
What should I do about speeders?

Well, I'll share with you a little bit of my philosophy on
the subject. How many times have you heard someone say "there's
never a cop around when you need one"? I hear it all the time,
and it's true - especially with regard to speeders on the
highway. In this day of shrinking state budgets and overworked
police forces, there are fewer and fewer cops available to patrol
the roads to catch those evil lawbreaking speeders. This means
it's up to you and I, as good citizens of this country, to help
the cops out. Whenever you see a speeder, do anything you can to
slow them down. Think of it as a form of "citizen's arrest" -
you're preventing a lawbreaker from committing a crime by
detaining him. That's your civic duty!

Back when I was a trucker, we had a name for those
lawbreakers. We called them "Roget Ramjet." When I spotted a 4-
wheeler coming up from behind at a good clip, I called out "here
comes Roger Ramjet!" on my CB to let all the other truckers know.
I had lots of fun pissing off Roger Ramjet. You see, being a

trucker is a tough job. The hours suck, the pay sucks, women leave us or bitch at us because we're never home, and the drive gets *really* boring after a few hours of monotonous Interstate. Truckers relieve the boredom in various ways. Some jaw on the CB. Some crank up the Patty Loveless tape. Me, I used to relieve that boredom by pissing off Roger Ramjet.

When you're driving an 18-wheeler, there ain't no car that's gonna mess with you, no way no how. They KNOW that I could squash 'em like a bug if they tangled with me, so I pulled out right in front of 'em at 55 MPH, just to watch 'em screech on the brakes. Occasionally I got lucky and ran 'em off the road. [Cabbie was a special consultant for the movie "Duel." -Ed.] I'd pass other trucks for absolutely no reason, going maybe 1 MPH faster than they were, just to get in these guys' way. I figured it served 'em right - after all, this ain't no goddamn Interstate Grand Prix out here. Anyway, you as a car driver have to be a little more careful around Roger Ramjet than truck drivers need to be, but you can still do your part.

Take your time when passing, especially if there are a few speeders stuck behind you. In this case, it's acceptable to reduce the speed on the cruise control a little bit.

If you're in the right lane behind another car and you see Roget Ramjet flying up in your mirror, whip out into the left lane right away, even if you weren't quite ready to pass yet. Not only will you be helping the cops, but you might just be helping yourself: there are drivers out there who for reasons unknown like to exercise their entire rev bands. They'll speed up, then they'll slow down as soon as they catch up to somebody. If you don't swing out now, you might end up being stuck behind someone like this yourself.

If you're passing a slower vehicle with one or more Roger Ramjets on your tail, remember to delay your return to the right lane as long as possible after you've cleared the front end of the car you're passing. And keep a sharp eye on your rear view mirror - if Roger Ramjet tries to pass you on the right, THAT is the time you should return to the right lane. In many areas, it is against the law to pass a vehicle on the right, so you're fully justified in cutting him off.

Remember, delay Roger as long as possible, and then pat yourself on the back - you're doing society a favor!

Dear Cabbie,
Can you recommend a good general strategy for driving on the Interstate?

You bet. My favorite is something I call the "Autopilot" technique. When you're driving, find another vehicle which is

moving along at the speed limit and whose driver seems to know where he's going. Set your cruise control to match his speed, and keep station with him. This makes driving easier for you, since you no longer have to think so hard about when to turn, how fast to go, etc. Just keep your eyes glued on his back bumper and follow him. Let HIM do all your driving work for you! By the way, I learned this technique from watching baby ducklings. Mother nature sure knows her stuff!

Dear Cabbie,
What's the proper technique for passing another vehicle on the expressway?

The prime directive when passing is to NEVER exceed the speed limit under ANY circumstances. Those speed limits signs are there for your safety and the safety of other drivers on the road, and they are NOT flexible. When I'm on the highway, I set my cruise control for 55, take my foot off the gas, and I'm all set until I reach my destination. That way I never have to worry about my speed.

When you come up behind another vehicle moving more slowly than you are, hit your brakes slightly to disengage the cruise control, and then match his speed, keeping station about 10 feet from his rear bumper - you want him to know that you are there. Now, sit back and wait a while, just to make sure he isn't going to speed up and eliminate the need for you to pass him. If, after 20 miles or so, he's still moving at the same speed, re-engage your cruise control at your original speed (i.e. the speed limit), change into the left hand lane, and execute your pass. This may take some time, depending on just how much slower the other vehicle is travelling, so be friendly! Wave to the other driver, and give him your friendliest Gomer Pyle grin. If another car comes up behind you while you're passing, just ignore him. Remember, you're moving along at the maximum legal speed. Anyone going faster is a lawbreaker, and there's no reason for you to break the law just to help someone else break the law.

By the way, some vehicle owner's manuals mention that it's OK to step on the accelerator pedal while the cruise control is engaged in order to speed up to pass another car, and that this will not damage the cruise control. The owner's manual is WRONG! Think about it - it's in the car makers' best interests to have you breaking your cruise control all the time, since this helps to keep his dealer's service bays full of paying customers. Take Cabbie's advice: once your cruise control is set, don't touch that gas pedal!

Dear Cabbie,
Suppose I'm passing somebody in the left lane as per your passing guidelines. What do I do about those drivers who zoom up behind me at warp 9 and then start to tailgate me?

I'm glad you asked me that. As everyone knows, tailgating is almost as dangerous as speeding. In fact, the two go hand in hand, especially if you follow my advice about passing. A speeder will usually tailgate decent law-abiding citizens like yourself in a vain attempt to get them to speed up or to let them by. Of course, speeding up is the LAST thing you should do, since it would force you to break the speed law which we know to be absolute.

To get them to stop tailgating you, the first thing you should try is sticking your left arm out the window and waving for them to pass you. Of course, since you're both in the left hand lane, there is no way he can do this unless he wants to drive on the median strip. Perhaps he will be stupid and actually try to pass you and end up in a crumpled metal ball somewhere on the grass, or maybe he'll realize how silly it is, give up, and back off.

If the arm wave doesn't work, use your brake lights. Pretend to "see" an invisible dog crossing the road, and slam on your brakes. This will definitely put the fear of God into him! He'll see your brake lights come on, and he'll quickly slam on his own brakes. You may want to limit the use of this technique to states which have mandatory auto insurance laws. After all, it would be a pyrrhic victory to stop a speeder who couldn't afford to pay for the repairs to your car's rear end. If you happen to suffer whiplash or other expensive injuries as a result, so much the better - the more he has to pay, the better the lesson he will learn.

If you don't mind littering, bouncing a few items off the tailgater's windshield sometimes wakes 'em up. Start off with soft things like overripe tomatoes or rotten eggs. If they don't get the hint, escalate with slightly harder objects like golf balls or rocks. Of course, every good driver has such things in his "driving safety kit," along with a blanket, road flares, a first aid kit, those red triangular reflectors, and a big can of gasoline in the trunk.

Remember, tailgating is against the law, just like speeding. Be sure to do your part to help enforce a safe following distance in other drivers!

Dear Cabbie,
My husband tells me that the left lane should be used only for passing, and that I should normally drive in the right hand lane. Is this true?

Absolutely not!! It's your RIGHT to drive in ANY LANE YOU WANT, ANY TIME YOU WANT. Your taxes paid to build that road, didn't they? That makes you the *owner* of the road and you can use it however you please, as long as you don't speed.

Some highways do have signs which say "slower traffic keep right," but the word "slower" refers to traffic travelling slower than the speed limit. Since you have set your cruise control according to my guidelines, you are travelling right AT the speed limit, and these signs do not apply to you. You can drive in whichever lane suits your whims.

Now, it is true that some states have archaic laws still on the books that state "stay in the right lane except to pass," but these laws are never enforced. In fact, most people aren't even aware that these laws exist, yet there are quite a few evil speeders out there who have the audacity to expect people to obey them. So the next time your husband brings up the subject, tell him to just make sure he obeys the speed laws and not to worry about *your* driving. If that doesn't work, then just withhold sex from him. My wife does that to me all the time, and it always works!

Dear Cabbie,
I have a cellular phone in my car. Is it OK for me to talk on it while I'm driving?

Absolutely! A car phone is the best way to impress people on the road. It's almost as cool as jawing on the squawk box [CBer slang for a CB radio. -Ed.] If you're a single guy, just think about how impressed the chicks will be when they see you talking on your way-cool cellular phone. Heck, if the chick also has one, she might even give you her number right then and there (some chicks have little handmade signs that they hold up with their phone numbers written right on them)! If you can't afford the real thing, J. C. Whitney has a fake one which looks real and is just as impressive to other drivers. If you decide to go this route, be sure you stop at Radio Shack and pick up a real cellular antenna for your rear window. If you have a fake phone and no squiggly antenna on your car, people will be able to tell that the phone is fake. You certainly won't get any chicks THAT way!

Dear Cabbie,
Do you have any tips for city driving?

You bet. Here's are some tips I picked up when I was a cab driver in New York City: First, don't *ever* use your turn signals. When you want to change lanes and other drivers see your turn signal come on, what's the first thing they do? That's right, they SPEED UP, closing up the gap you were about to merge into. When you want to change lanes, do it quickly, and don't signal. That's like broadcasting your plays to the other team in football. It *is* OK to turn you signal on for no reason and then just leave it on, mile after mile. It keeps the other drivers on their toes, trying to guess your next move.

Here's one you can use the next time you're sitting in the driveway at the McDonald's drive-through lane. We've all been frustrated by those evil speeders who, although their cars are far enough away from us that we could safely pull out of the driveway if they were doing the speed limit, because they are speeding we cannot pull out without getting in their way. So feel free to get in their way! After all, they're speeding, and that makes them lawbreakers. Enforce the law by pulling out in front of them and make them slow down. Of course, unless you have doppler-calibrated eyeballs, occasionally you're going to misjudge the speed of the oncoming car, but the valuable service you're doing for society is worth a mistake now and then.

Dear Cabbie,
What's the proper way to handle a light that's just turning red as you approach the intersection?

When coming up to an about-to-be red light, it's better to simply maintain your cruising speed than to use your brakes. After all, there might be someone tailgating you, and you can't trust them to be paying attention. When you see that stale green light half a block away turn yellow, just sail on through. Don't speed up, however, because you'd then be breaking the speed limit and that would be illegal.

Dear Cabbie,
Why do some drivers speed up when I try to pass them?

Some drivers seem to have a sleeping demon within them. Most of the time they'll be driving along, minding their own business, but the moment you try to pass them, the demon awakens and they increase their speed in an attempt to prevent you from passing them. These people think that if you pass them they will "lose" the Interstate Grand Prix, and they will try very hard not to let that happen. These drivers aren't all bad, however. In fact, they become quite helpful when you're blocking Roger Ramjet, since they'll speed up to match your pace and then stay there, blocking Roger's car for miles. Although he's basically clueless, consider this driver your ally in the war against speeders.

[Editor's Note for the Humor Impaired: The above is a satirical work. If for some reason you feel the need to flame Homer Melchrome, you should be aware that your time would be more productively spent acquiring a sense of humor for yourself.]

Sabers don't have to be digital. I use mine on over 40 FM analog
channels. They are digital capable for Securenet encryption and in that
case the repeater input is also digital. The repeater must be digital
capable as well.

>frequency?

Probably for something like Muzak or other music subcription. It may
have been for point of sale but not likely.

On many Chevron Stations you might see a small .75M dish used for point
of sale transactions by credit card or ATM. We use Ku band satelite for
this. (don't bother trying to listen - it's digital at 11 to 14 GHz,
spread spectrum and encrypted) Other gasoline, convenience stores are
starting to do the same. There may be people using terrestrial systems
for this as well, which may use Yagis or reflector type antennas.

The ASTRO system is really TDMA or FDMA (I forget...) but is unencrypted...Meaning you could buy an Astro portable and it could decode the digital stuff....(Trust me I own one).

Correct on the Spectra Astros.

They (Motorola) does make a secure board for the astro, giving it the following options...
Analog Voice
Secure Analog Voice
Digital Voice
Secure Digital Voice

Pretty Cool in my book.

What I did with mine (when I had one) was step down in search mode to the lowest Cell freq. You can do this by turning off the squelch so it doesn't search but steps one increment at a time. Then hit monitor to store it in the monitor band. Then I saved the cell freq in the monitor channel to Channel 200 (or wherever you want it) instead of leaving the middle cell freq in channel 23. I thought it was nicer to have it all the way up out of the way and to also start from the bottom instead of the middle of the band if I ever wanted to listen to the cell band. Of coarse I never did thats illegal. :) By the way mine was a 7A4 too.

>my 15-year-old bearcat in the car. I mostly listen to aircraft
>band so it seems like the auto antenna would be OK. But, how
>well does the antenna splitter work? How will the reception be
>on the scanner or on the car radio? How about the reception
>on the car radio if the scanner is not connected.

I have one of these installed in my car and it works just fine. It does
reduce the car radio recieption only slightly on week fm stations.
Disconnection of the scanner improves this recieption also turrning on
the scanner seems to increase the radio recieption. I have a Bearcat 220
connected to this and it works better than the rubberduck on lower bands
and it works just as well as the duck on the high bands.

Dave,

You should have any problems with your scanner. They are "legal" in all three above with no restrictions on frequency coverage. Until recently Germany had very tight restrictions on frequency coverage but this is no longer the case. Once you start to use them it becomes a little more "complicated" though but in most cases unless you are acting in a rather silly way you will not end up in trouble.

In the UK it is technically illegal to listen to anything other than Broadcast Radio, Amateur and CB tranmissions. The Police do have the powers to confiscate your equipment should they find Police frequencies stored in it. For this to occurr though you would have be acting in rather dubious manner and more likely to be "in bother" with the Police for other reasons.

The Radio Communictions Agency produce a A4 information sheet on the use of scanners (Form RA169, phone number +(0)171 215 2150). The reverse side of which has the following "Questions and answers":-

Is a licence needed to own a scanner ?
Not if is inherently incapable of tranmissions. But its use to listen in to private messages is an offence.

Does owning a scanner make a person liable to prosecution ?
No, but is use, except as permitted under section 5(b) of the Wireless Telepgrphy Act would.

Is it all right to listen as long as what is overheard is not disclosed ?
No, using radio equipment to listen in, except as provided for by Section 5(b) is an offence, regardless of whether the information is passed on.

Could I get "authority" from the Secretary Of State to listen to the emergency and martime and aeronatical services. I am interested in them and wish to help ?
No, the Secretary oOf State's authority is usually reserved for persons acting at his request and on his behalf. If you wish to listen in to messages, you must obtain permission of the person sending them.

Isn't this a bit heavy handed ?
No, no one likes their private conversations to be listened in to.
Parliament has passed the laws in question to protect the privacy of
radio users.

Steve> My understanding is that in England it is illegal to listen to any
Steve> police service's over a scanner. I am unaware of the laws in Holland or
Steve> Germany. I read a humorous artical once where the police in England
Steve> broadcast a fake UFO landing out in the middle of no-where. They
Steve> arrested everyone that showed up for monitoring police frequences,

This has been reported just once (AFAIK). There was also a "reported"
case where fake bank notes were reported to be "blowing all over the place"
with those who turned up apprehended.

Having heard no first, second, third or more hand reports of these
incidents other than reported in the (tabloid) press and subsiquently
"re-told" I still treat them with a rather wide bearth. I can recall
just two cases that involved some aspect "Scanning & Scanners" in the
last year or two that actually made it to Court and were "factually"
reported - in both cases there was considerably more to the story
than just using or listening to a scanner.

2625. Strange drive thru story

Newsgroup: rec.radio.scanner
Date: 1995-05-16 00:00:00 UTC
From: joe.taylor@woodybbs.com
Message-ID: <93.7516.7592.0NFBA357@woodybbs.com>
Source record: 256625

Hi J.P.
I haven't tried it, but many many two-way FM radios can match the frequency of most low powered units that are commonly used by fast food places. I often monitor these fast food places when I am looking for lunch. My lunch break is 30 minutes so I need a "FAST" fast food place as opposed to a SLOW one :-). I live in a town of about 18,000 and I know most of the voices. I know which voice means SLOW service at the drive-through and which ones are QUICK. I scan from where I work (top of a high hill) for FAST service staffers. I find Burger King to be the slowest (about 8 minutes) and one of the Hardee's gals to be the quickest at under 90 seconds from order to drive-off. I could (illegally) place my order using my 2 meter ham rig with it's expanded frequencies (both transmit & receive), but I would risk my ham license by doing so. I am not licensed for other than ham band operations.
I do have to turn down my receiver when I reach the drive through speaker/mike as I create great feedback otherwise. The most fun is listening to a secondary frequency that the customer in the car doesn't get via the order speaker. There is often an "intercom" frequency between the order taker and other staff. You should hear some of those comments about us customers. You'll hear things like " That larda*s ordered TWO!!?" When I responded "Yeah I ordered TWO!" I heard the customer speaker click a time or two (she probably thought it was stuck on) and then she told the fellow that asked that trite question, "Hey he can hear you too." The guy answered, "Nah he can't, you had your button down." I answered (back through their speaker), "Yes I can hear him and have it all recorded." (A lie on my part). After that all got quiet. At the window the young lady apologized for the remarks by her co-worker who (I believe) was standing nearby to see if I was angry. I laughed when I told her that I was a ham and that many hams can monitor just about anything..... The lesson is that NO RADIO FREQUENCY is secure including cellular phones. It's all a matter of wanting to listen and then doing whatever it takes to do so. It usually isn't difficult.

>encrypted?

If the radio is not turned off before the battery dies, yes, it will lose
it's key. However if the "secure switch" is on and the radio is not "keyed"
it will give the user an error tone and can't be used.

The key will also be lost if the battery is removed without turning the radio
off.

Under normal conditions, most Sabers are set up to give a short beep when PTT
is pushed in the non secure mode to remind the user he is transmitting in the
clear. As long as they have their key installed, the Sabers will receive
encoded or unencoded traffic regardless of mode selected.

I am new to scanning and I am considering purchasing my first scanner. I am looking for something mobile that can pickup cell frequencies.

I spoke with a vendor from Canada that says they can ship me (in the US) a BC3000XLT (or other scanner) that has full coverage with no blocked ranges.

I know their prices are higher but I may be willing to spend the extra money to get cellular.

My question: Will this scanner work in the U.S., and what kind of problems (importing, service, freq ranges, etc) can I expect? Looking for any advice I can get...Thanks

Being in the left, or number 1 lane, in California for no reason is OK until someone comes up behind you and wants to get by. Regardless of the speed limit, the rule is "Slower Traffic Keep Right". "Slower" means slower than the guy behind you.

Except in limited areas - using a radar detector ON the freeway in California won't get you much. Even in areas where the local government buys radar for the CHP, it's not used on the freeway. But watch out for airplanes!!!

Matt: Don't forget that "Cabbie" should be taken with a grain of salt...

I see that you are using Demon (like me) so I assume that you are in
the UK (the laws vary across the world).

In the UK, the basic position is:

They are completely legal to buy and own, hence the reason why you
can buy them from reputable high street shops.

They are illegal to use (except I believe for listening to normal
broadcast, CB & Amateur Radio).

I also believe that if the police found your scanner with "illegal"
frequencies stored in it then you could be prosecuted, even though
they had no proof that you had listened to those frequencies.

If anyone knows better, or more detail, then let us know.

A> I'd like to find a good mobile unit without spending $700.

Well, since April, 1994, it's been illegal for any cell-capable scanners to be imported into, or manufactured in, the U.S.
What that means is that since then, stocks of the scanners you want have been going down, until there are very few left, now. You might try calling Grove (800-438-8155) to see if they have any PRO-2006's left (Marymac is out of business), but other than that, you are probably only going to find a scanner capable of receiving cell freqs as a used unit. You could, of course, simply let your fingers do the walking on the phone trying to find one, but they are pretty well extinct as new units.
Sorry.

M> Could someone get me started with some good freq to listen to ? I will
M> share any new freq that I receive.

Well, you've got the books, so you have the frequencies.
What it sounds like, is you need to determine what you want to listen to.And there is a wide variety of stuff out there, too: police, fire, air, county, state, penal, traffic, power utilities, media, airlines, military, to name just a few. There are very few of us who can listen to it all, so we have to determine what we'll specialize in, so-to-speak.
A *LOT* of scanners like to listen to law enforcement, as there's almost always something exciting going on there. It's a real kick to see a story in the paper or on TV, and realize that you know more about what went on than they do!
Fire departments can be exciting, too.
Others like to monitor military channels, for whatever reason; maybe they were in the Service, and find it interesting.
Governmental channels can provide an insight into some of the antics we see in our politicians.
All in all, it boils down to this: YOU have to decide what to listen to. Take your time, program in a few different agencies, and see which strike your fancy. You don't have to monitor what *I* monitor. As you get farther into scanning, you will learn how to program your scanner to cover different agencies, and how to get more of what YOU want. Just don't try to rush it, and do what YOU want, not what someone else tells you that you *MUST* do. Remember, this is supposed to be fun!

Scanners are actually legal. While there are certain restrictions on their
use (most places make it illegal to use a scanner to commit a crime, for
example), for the most part they are legal to use.
As a rule, evesdropping on conversations that are considered private are
illegal (cell and cordless phones in particular).
Hope this helps.

Encryption Protocols
A Brief Look at Analog and Digital Encryption Devices
by Doug G. (AOL batwing211@aol,com)

COPYRIGHT 1995 (Not to be published without permission of the author)
Electronic distribution (non-profit) of this work is permitted as long
as the work remains unaltered.
Seeded data present. Any copy of this work can be proven to be the work
of the author.

All proprietary and trademarked terms used below are the property of
their respective owners, with
due credit given to the holder of the trademarked term.

Encryption of the human voice is a complex and intricate procedure
that is accomplished
by one of two methods: analog or digital. The human voice, for the
most part, occupies the
frequency range from about 100 Hz to 3 kHz, forming complex analog
waveforms and patterns.
Analog speech encryption can be as simple as speech inversion, where the
human voice is
"inverted", resulting in the radio traffic sounding like a popular
Disney character, or quite complex,
with the voice split at about 1500 kHz, inverted at both ends, with the
center carrier swept randomly
up and down several kHz from the center transmit frequency. Digital
voice encryption requires that
the analog signal be sompled, digitized and encrypted, transmitted, and
decrypted in real-time.
Since complex analog encryption is rather rare, our focus will be on
digital encryption products
manufactured by Motorola, Inc.

Analog Encryption Types and Products

Since speech inversion is easily defeated (the Ramsey Electronics
SS-70), most law
enforcement agencies have ceased using this encryption technique. I
know of no federal agency
that has ever used analog encryption devices. These simple, low-cost
devices are more suited to
the local police department, since all but the most serious scanner
owner will not be able to
understand the radio traffic. One of the largest manufacturers of
analog encryption devices, Midian

Electronics, offers a complete line of products from the simplest and smallest speech inversion scrambler to a highly sophisticated "rolling-code" encryption device. Contact Midian Electronics at 1-800-MIDIANS for further information on their line of analog voice encryption products.

MotorolaTM Encryption Protocols and Products

Although there are still some analog Motorola encryption devices still in use, including simple speech inversion products, the majority of devices currently in use are of the digital variety. All Motorola voice privacy protocols are referred to simply as "SECURENET", which is a general term that Motorola uses to identify it's digital encryption products. There are three different basic encryption protocols, two of which have two distinct variations, for a total of five unique (and non-compatible) encryption protocols. Each of the five protocols uses a field inserted "key", which is what makes the communications secure. Since the author is not a cryptographer, it is simple enough to understand that without the proper encryption "key" loaded into your radio, all that you will hear is white noise, or static, when encrypted traffic is being passed between radios.

The Original Propreity Encryption Algorithm, DVP

DVP, a term that Motorola coined for use with their initial entry into the digital voice encryption product field, is a proprietary Motorola protocol that uses a self-syncronizing encryption known as cipher feedback. Depending on who you ask at Motorola, DVP actually has two different meanings. DVP stands for Digital Voice Privacy or Digital Voice Protection, same encryption protocol, different terminology. The basic DVP protocol is capable of 2.36 x 1021 different "keys" to ensure protection for your voice conversations.

Data Encryption Standard

In the middle 1970's, the federal government finally decided that they needed to standardize all federal agencies on a common encryption protocol to protect sensitive, but unclassified data. Several different schemes were submitted, but the one approved by the National Bureau of Standards was a protocol that became the Data Encryption Standard, or DES. Broaden

your mind for just a minute and forget about radio traffic. There are several other forms of communication and data that must be protected from prying eyes (and ears). IRS records, Federal Banking data, etc. is not "classified" in the military sense, but does require protection nonetheless.
This Data Encryption Standard, once standardized, would allow all federal agencies to use the same encryption protocol, allowing them to intercommunicate when and if the need should arise.
DES is capable of using 7.2 x 1016 different key combinations and uses a self-synchronizing method of encryption known as cipher feedback. Just remember, DES is not authorized to encrypt communications or data that is classified in the interest of national security, but we'll get to that in just a minute.

So, we just learned the two baisc types of Motorola encryption, DES and DVP. In a nutshell, DVP was designed to be used by anyone who needed protection from unauthorized eavesdropping, including local government and businesses. DES, on the other hand, was designed to be used only by the federal government. Availablity of DES products was supposed to have been severely restricted to federal government agencies and military personnel only, but a trip to any large hamfest will always yield at least one person selling SECURENET products and radios.

Variations of the Originals

After DVP and DES products gained acceptance and their use became widespread, a glaring flaw became obvious. When using their radios in the encrypted mode, agents noticed that their radios did not seem to transmit as far as they did when in the clear mode. In a flurry of commotion and denial, Motorola quickly went back to the drawing board and found out that sure enough, use of the original DVP and DES protocols did limit the range of the radio, sometimes as much as 30%. In response to these complaints, two new variations of the original protocols were introduced, each with the added acronym "XL", leaving us with four distinctly different encryption protocols: DVP, DVP-XL, DES and DES-XL. The "XL" variations eliminate the range loss problem and in the case of DVP-XL, the number of available "keys" is increased

to 7.9 X 1028. DVP-XL and
DES-XL both use a different type of encryption known as counter
addressing. Just remember that
all radios must use the exact same type of encryption to
inter-communicate in the secure mode
(DVP-DVP, DES-XL-DES-XL, etc).

Digital Voice International

The fifth unique encryption protocol, is known as DVI-XL, or Digital
Voice International.
Since DES products require a munitions license to export from the U.S.,
DVI-XL allows other
countries to enjoy the same type of encryption as DES-XL, but with a
reduced number of available
keys. DVI-XL is not common in the U.S., although is quite common in
countries such as England.

2651. Part II, Take II Encryption.....

Newsgroup: rec.radio.scanner
Date: 1995-05-17 00:00:00 UTC
From: batwing211@aol.com
Message-ID: <3pdu3j$p3r@newsbf02.news.aol.com>
Source record: 256451

The Key Variable Loader

If you've been reading the above thoroughly, you may be asking yourself "Well, how do you get the "keys" into the radio?". Good question, so let's talk about it. The device used to load these encryption "keys" into a radio is known as a "Keyloader", or in Motorola-speak, a "KVL", or Key Variable Loader. This is a hand-held device that looks similar to a radio, but allows the operators use to insert the "keys" into the encryption devices of the individual radios. The KVL attaches to the radio with a special cable and attaches to the interface port of the radio. The individual actually enters numbers (and letters, depending on the protocol) into the KVL to produce the "key" to your radio traffic. The KVL transcribes your input of approximately 20 characters into the "key" that is loaded into the radios. KVL's are capable of storing about 16 "keys" in non-violatile memory, allowing radios to be loaded when desired. Since access to the KVL constitutes access to the entire system, these devices are usually closely guarded at the radio shop. There are five different KVLs, one each for DVP, DVP-XL, DES, DES and DES-XL and a separate KVL for DVI-XL. Newer loaders are made to support both DVP and DVP-XL and another to support DES and DES-XL (Two protocols with one loader). It is rumored that there is a "super KVL" that will load any of the four domestic encryption protocols, but the author has never seen one, and it is not listed in any Motorola literature.

Advanced Encryption Products

More recently, there have been solutions to nagging problems in some of the larger cities. For example, lets say that you have to manage the entire Drug Enforcement Agency radio system in the south Florida area, which is probably quite a large fleet of radios. You basically have two choices, either you have one person whose only task is to keyload radios all day, or you issue each office a KVL and allow them to do it themselves. As we spoke about

earlier, if you increase the
number of KVLs, you increase the possibility that one will be lost or
stolen, not to mention the fact
that KVLs are outrageously expensive ($3000+ each) to purchase. Enter
OTAR, or Over-The-Air-
Rekeying. Quite simply, you have one dedicated computer, called a Key
Management Controller,
or KMC, which centrally manages all of the encryption "keys". OTAR is
available for any one of the
five available encryption methods as an add-on component. OTAR allows
radios to have new
encryption keys loaded into them over the air, just as the name
suggests. Encryption keys can also
be erased over the air in a process called "Key Zeroization". If a
radio is lost or stolen, all of the
radios in the system except the lost or stolen one can be instantly
re-keyed over the air. Also, lets
say that you are about to raid a clandestine drug laboratory and you
accidently remove your radios
battery, thereby erasing the encryption key. No problem, the KMC can
immediately download the
encryption key back into your radio before you bash down the front door!
The KMC can also
download the available system keys into KVLs by phone lines so that
encryption keys may be kept
locally should the radios be out of the range of the KMC when new keys
are sent out. The other
part of Advanced SECURENET is "Multikey", which is the ability to store
multiple encryption keys in
one radio. Most radios can only hold one encryption key at any one
time. If you have two separate
groups who don't intercommunicate, multikey allows supervisors to have
both encryption keys in
their radios and converse with both groups, but individuals in the
separate groups cannot monitor
each others conversations. Some radios, when equipped with Miltikey,
can have as many as 16
different encryption keys.

The Future - Classified Radio Communications

As we previously mentioned, even with the high level of security
offered by the Data
Encryption Standard, no classified traffic may be encrypted with DES. A
new type of encryption,
known as Facinator, offers the government the ability to encrypt
land-mobile and other radio traffic
up to the level of Top Secret. Facinator is a completely different
algorithm whose details are still
classified. The U.S. Secret Service is reported to be using Facinator
in their Motorola Saber UHF

radios for executive protection and security details.

Motorola's latest development, the "ASTRO" TM system, is capable of transmitting either
analog or digital voice, clear or secure, conventional or trunking. This system is currently being
installed in south Florida for the Florida Highway Patrol on 800 MHz trunking (without much
success, I might add). LAPD is also switching over to the Astro system and most reports received
so far indicate that the system works fine.

The Radios

Digital voice encryption is not a cheap endeavor. There are several Motorola portable and
mobile radios that offer SECURENET as an option. Even a 15 year old Motorola MX350S portable
radio that has DVP is about $350 used. These are 4-32 channel models that are quite large and
cumbersome, but incredibly durable. The most popular is the SaberTM portable radio. Although
still large and bulky, the Saber offers many options and is still the top-of-the-line portable radio.
The Saber comes in three different varieties, known as Saber I, II and III. Both SECURENET and
non-SECURENET radios are available. A Saber I has 12 channels and no display; a Saber II has
72 channels with three buttons and a display; a Saber III has 120 channels, a full keypad and a
display. Additionally, Saber II and III radios offer scan capabilities. A used Saber III with voice
encryption installed goes for about $800 on the used market. Not bad, considering that current list
price is over $3000! I cannot stress enough the importance of being extremely careful when you
purchase a used radio. Be careful, and be sure you get a reciept.

Repeaters and SECURENET Products

Using digital encryption does have it's drawbacks. The common repeater, which consists
of an input frequency and output frequency, normally uses some sort of Continuous Tone Coded
Squelch System, or CTCSS, trademarked as Private LineTM (PL) by Motorola or
ChannelGuardTM by General Electric, to prevent unauthorized or inadvertent access to the
repeater. Well, to put it simply, you can't send a CTCSS tone with any form of digital encryption.
There are two ways around this shortcoming; either the repeater does not use a CTCSS tone,

which is called a transparent repeater, or a repeater such as the Motorola MSF5000TM is used.
The MSF5000 can be operated in the transparent mode, which allows both clear and secure
transmissions to be passed, or the repeater itself can be keyloaded with the same encryption key
as the radios, allowing only those transmissions with the proper encryption key to be re-transmitted.
It is commonly said that most open (no PL) repeaters will not pass digitally encrypted voice. This is
simply not true. The repeater will pass the digital signal, which actually has a narrower deviation
than regular FM voice, just fine. Whether or not the signal is still intact enough for decryption is the
big question.

Conclusion

It is clear that monitors will probably never be able to eavesdrop on digitally encrypted radio
traffic, but I hope that this short introduction to the many facets of encryption products available
helps you to better understand their use and operation. The fact remains, however, that it will be
many years before the home computer advances to a stage that scanner owners can decrypt a
secure radio transmission.

Note: Many of the terms used in the above article are trademarked by Motorola, Inc. including, but
not limited to: SECURENET, DVP, DVP-XL, MX-350S, MSF5000, Saber, OTAR, and PL.

The end.

Thanks. I just read your posting and ordered a BC9000XLT (plus
the CTCSS board option) for myself. The review unit had to go
back to Uniden. :-(

It's a great scanner but the old Grove price was too high and I
was dragging my feet, waiting for prices to drop.

(To answer a question I've been asked several times: although
some of my equipment reviews appear in Monitoring Times, I pay
the same price for the radios as everyone else.)

8 bit DES? Around here DES is 64 bits. In the past, the marketing literature equated the number of key combinations to something about "grains of sand on all the beaches in the world."

Well, not along the same lines, while working at the Clovis Independent
in Clovis, CA, we had a base station radio from the fire dept complete
with tone activator. We could set it for scan, which would scan the FD
and PD freqs, (Only two freqs, small town) or for tone, which would set
off the buzzer that we could hear throught the newsroom. Again, small
town, we only had a 5 person staff, so it wasn't that loud.

well, i certainly don't work for motorola or anything of the sort, so i'm not basing my responses on a slant of view such as that.

i only call it as i see it. los angeles police department (and i don't live in los angeles, i live in san jose, which is 350+ miles north, thhough i am in la for several days a month every month), knew when they were purchasing the equipment that new repeaters would have to be installed for the encryption to function properly over a wide area. they chose not to do so at the time and now it's pretty much their own fault.

another major reason for the purchase and upgrade of all their old stuff (costly as it was), came mainly from the problems that were brought to light in the early 94 quake. city d officers were carrying around inadequate mx 350's for handhelds and inadequate mobiles, both with a clear lack of channel capacity and communications flexibility. communications were quite difficult with outside departments as well as from district to district due to the lack of channels available on any one radio. with the 255 channel capacity of the astro radio line, this has been overcome and improved (though the officers are still learning how to take full advantage of the new radios). i'd certainly upgrade my department after a mess like that

these are just my viewpoints however...now back to our regularly scheduled arguing and bitching....

There is no adjustment.
In fact, there was a company that once sold a "tiger tail" antenna for
amateur handi-talkies that claimed to improve the signal up to 6 db. It
wasn't a scam and it worked - they sold you a 19" piece of wire that attached
to the ground portion of your BNC connector. I built one for a few pennies
and it added at least 3-4 db on all sigs, receive and Xmit. By the way, they
sold it for $9.95!

>>o The speaker of the -43 seems to get overloaded above 50% volume. Above
>>50% it also seems that it vibrates and ratteles like something is loose.
>>I've checked it and nothing is loose that I can see. Is this common?
>>I've seen posting's on replacement speakers. The speaker is glued in.
R.S. offers a better speaked that will handle the power. Most stock speakers
will burn out if the receiver is operated at high volumes.
Agn, sri for the butt in!!

Source record: 256494

Hello there,

I bought an old RS scanner Pro 9 (Patrolman)
at a garage sale for $5 . No manuals came with it; in fact
the person selling it had no idea what it was .

I was wondering if anyone had ever worked with one of
these and what is it that it is capable of. I have the
bare bones product. Just some connectors came along
with it. I would love to get a couple of squeaks at least
out of it.

I do realize this is a pretty old set and might not
do much but would love to hack around with it.

Thanks a lot for any suggestions

You may have a hard time finding any NEW scanners that receive Cell phone freqs, since the law was passed that made it illegal to manufacture in the U.S. or import scanners that received these freqs or were easily modifiable after 4/94. Your best bet would be a used one.

That's nothing. The Los Angeles City Fire Dept used to use frequencies
in the 39.000 range, as well as the 860.000 they use now, sort of a
simoucast thing. Well, every Saturday and Sunday morning I would here
some fire department somewhere talking. This would be early in the
morning around 8 or 9 am. One day I was listening to a grass fire, they
gave a bunch of streets and highways, sounded like a rager. Well, finally
I hear a dispatch, for brush 12 as I remember. The time out was 11:29. I
live in California. The time was 9:29 am. That is some helluva skip. I
wrote down one of the names of the departments responding, but I never
could find what state it was in. After awile LAFD stopped using the lower
#s and I neded the space so I never heard the skip again.

>Lawrenceville, GA 30244 | |

Gary... That's true, but if you look at the total cost: USCG transmission
cost + user receiver cost, I'd guess that x thousand users having to buy
otherwise useless, specialized LF/MF rcvrs instead of using VHF which
everyone already has on board, would tip the cost scale. Plus a better
quality, non-multiplexed, ascii signal to boot. I was hoping they'd
use the existing NOAA VHF weather broadcast sites which already provides
good coastal coverage, and use one of the unused WX freqs at that site.
(162.40, .55, etc.) That way, anyone could get differential by turning a
knob on his marine VHF at zero cost.

Bob Kirk
N3OZB

I'm not sure about the great range from those MF beacons in the real
world. Years ago I used them for dfing, but they seemed noisy and
not terribly long ranged. But time clouds happy memories. :-)

Err, the differential receiver doesn't just dump audio into the GPS. There's data on that signal, and the data has to be recovered. I suspect it's those data recovery bits that are the hassle, and would have to be done, even if the signal was on VHF.

On the other hand, I also suspect, but don't know that, any collection of people who could put together a TNC could put together a homebrew differential receiver. As far as I know, there's no diff signals around here in the San Francisco Bay Area yet.

There are some FM radio stations that are broadcasting the same
correction info on FM subcarriers around here. You might want to
investigate that possibility as well.

The reasons for using VLF are two fold. First it can be recived at much greater distances than VHF and second it is almost immune to multipath propogation. This means that that you can have pretty high confidence in how long it took the signal to reach you. This important to correcting the GPS.

Ah, me. That spells the end of my quest for a cheap, simple substitue.

Just imagine: hundreds of dollars for a single purpose receiver to
copy 150 baud of low quality signal at an orphan MF freq. I wonder
if CG studied what percent of the growing number of GPS receivers
floating along our coasts are copying their differential bcsts? The
merchant fleet they can require to carry them & some gadget loving,
well off yachties? They should've gone VHF where everyone could copy
the signal for free by turning a knob on their marine VHF. Maybe
we can copy the FAA's new system if that turns out to be practical,
or actually *pay* the commercial guys who are doing it sensibly at
VHF. Or maybe wait till the Air Force is forced by public demand
to turn off the SA jiggling.

Thanks for the info.

I just ran into an acquaintance of mine who works as a reporter for the large daily newspaper here. we got to talking and soon I noticed what appeared to be a scanner in his shoulder bag. I asked him about it and sure enough, he pulled out cell-modified bc200. I asked him about the just-installed 800mHz trunked pub. saftey system here and how the reporters planned to monitor it once the UHF multicast stops. He informed me that they had made a big bucks deal with motorola and the pd to essentially buy into the system and have the software installed on their computers so that monitoring will be a breeze. Anybody have any thoughts on this? Has it been done elsewhere? I've never heard of this before but I guess theres nothing to stop these parties from such a deal. I'm wondering what else my friend can tell me.....heh heh....<g>

"Failure to Keep Right" is a big no-no in New Jersey. Any cop that finds you in the left lane for no reason WILL give you a ticket. It's one of the most common reasons for a stop.
FYI,
Former NJ police officer.

And, by the way...driving is not a RIGHT, it's a privilege.

: part of an exchange scheme and I would like to bring it if I can.
: Do the authorities mind the fact that you can listen in on
: police etc with the scanner?
: Is it likely to be confiscated at customs or could I
: get away with it by saying it is just a radio?

Nope, no problem, but say it is a scanner, not radio equipment. Chances are you won't even be stopped going through customs. You might want to register it with UK customs before leaving, and/or have the UK Sales Receipt, to avoid any questions as you re-enter the UK as to where it was purchased, else they may want duty fees. Have fun in the US!

: Thanks for any answers

No problem!

: wondering what else my friend can tell me.................heh heh....<g>

Sure, they do the same here in Columbus with any news source that wants
it, the city allows them to buy a Motorola radio that is programmed by the
city for MOST talk groups, but with transmit disabled. They do not program
in anything sensative, but most of that is DVP protected anyway. The
radios can scan. It is always best to keep the media happy..... and they
don't seem to mind shelling out the $$$ for a trunked radio.

2698. BC9000XLT for $389.95

Newsgroup: rec.radio.scanner
Date: 1995-05-17 00:00:00 UTC
From: casato_jc@atc.alcoa.com
Message-ID: <casato_jc-170595092301@132.226.103.38>
Source record: 256516

I was recently in contact with Grove Enterprises, and was told they just reduced the BC9000XLT (base model) from $424.95 to $389.95 !!
1-800-438-8155

That puts it right on target price for the PRO 2035 on sale now at Radio Shack for $389.95.

Of course, IMHO, the choice is CLEARLY the BC9000XLT ...

No, I don't work for Grove. In fact I only know them through many pleasant transactions. Just thought people might like to know, since I often see requests here for scanner deals, etc.

I believe they still have some GRE SuperConverters for the cellular freqs., if you're interested in that sort of device. Think they're around $85-$90.

Happy Monitoring ..

Source record: 256517

In my area (southeast Michigan) they delegate some RS stores as "closeout Collectors". All of the closed-out items will be at one RS store per district and you go there to get good deals on closed out, damaged, returned or otherwise non-new items. You can also have your local RS store call their headquarters and do a "district search" for a new item that may have escaped the closeout bin. They'll tell you which store in your area has the item. Good luck.

>stuff just fine on the "image" freqs

I've found that the same is true for the BC700A. From about 900mhz-920 mhz,
you can hear cellular calls. The only problem is that this scanner also
likes to do the same for the 160-174 mhz band. I can hear ham's talking
on the Federal govt band. Likewise, I can hear the local police, who have
channels around 460mhz, talking around 480 mhz. It makes it kind of
confusing when you're scanning a band for new frequencies.

Hi,

As an active ham and member of Amateur Radio emergency Services, I work a lot of public service events, severe weather watches and emergency events. To make using an HT during these events, which can last all day, a little easier, I'd like to have a custom earphone made. This would be the type that is used by television reporters that are molded to the wearer's ear and have a coiled cord running down to the HT.

If you know of any companies that do this sort of custom molding, please post a reply here or send mail. I'd appreciate any referalls that can be offered.

Vert likely that the Yagi is for POS (or ATM) Data communications (might even be my company's system). If the Yagi is about one meter in length with 11 elements, then the system is operating at 928/952 MHz in a digital paacket mode. The modulation is probably multistate FSK, so listening in with a scanner would be useless.

2719. Finding scanner mods

Newsgroup: rec.radio.scanner
Date: 1995-05-18 00:00:00 UTC
From: jim.kenzig@cleham.nshore.org
Message-ID: <8A99483.001F0009D8.uuout@cleham.nshore.org>
Source record: 256337

I read in the faq that in order to get a list of udated scanner mods
if you dont have FTP access is to send mail to
FTPmail@exchange.tlh.fl.us with the message only being GET INFO.TXT.
Can anyone verify if this service still exists and how long it takes
to get the list sent back?
I have been trying to no avail to get mods for the RS Pro-2032 and also
notice that there are two or three other people out there looking for
them. I know they exist because people are adverstising selling these
things with the mods in place. Is this included in the listing?
I tried this by the way and have yet to get a response from the mail
server. Thanks

2720. San Diego VHF fire freqs

Newsgroup: rec.radio.scanner
Date: 1995-05-18 00:00:00 UTC
From: drice@enuxsa.eas.asu.edu
Message-ID: <D8so2y.DE6@ennews.eas.asu.edu>
Source record: 256338

I'm looking for any VHF fire/EMS frequencies that are still in use within about a 15 mile radio of San Diego, CA. I know that SDFD is trunked now, but I recall that they used to simulcast dispatches on VHF. I won't have any gear other than VHF, so anything outside of 137-173 MHz will be off-limits to me.

Source record: 256339

> Of course, channels 56 and 60 are several hundred MHz higher than the
> airline frequencies so it may not be that critical.

Given that an airliner cockpit may be relying on -

90-110 kHz LORAN-C
190-285 & 325-435 kHz beacons
MF/HF long range comms
75 MHz marker beacons
108-118 MHz VOR & ILS localizer
118-136 VHF comm
243 MHz emergency freq
328-335 MHz ILS glide path
960-1215 MHZ Nav Aids
4200-4400 MHz radio altimeters
5000-5250 MHz microwave landing system
plus the internal frequencies used in the autopilot, inertial nav. etc;

- I'd suspect there are very few frequencies where spurious radiation could be totally ignored. Given that Boeing completely designed the new 777 on computer without prototype modeling and that it's a fly-by-wire bird, I dread the results when the first idiot activates his cellular phone in flight.

I am in need of an owners manual and/or service manual for a Bearcat
BC-200XLT handheld scanner and/or the schematic diagram (or copies).

Let me know what you can do for me and I'll gladly reimburse your costs.

Thanks...Hugh hduff@humnet.westonia.com

> I was just wondering whether someone could tell me if Scanners are actually
> legal. A friend told me that they were legal to own but illegal to use or
> something like that. Please help!

I seem to be posting an answer to this quite often now :-) I'll also mail a
responce - hope its of help.

If you have any UK specific queries try alt.radio.scanner.uk

The top and bottom of it is:-

Ownership: Yes you can what you want and wave it around in front
of anybody - no legal questions there - no legalities on
what frequencies they can cover bla bla bla.

Using it: As "Joe Bloggs" all you can *legally* listen to is AM/FM
Broadcast, CB & Amateur transmissions. Anything else from
Civil airband to Police is illegal unless you are licensed to
receive and the transmission was for your reception.

Chances of getting in trouble (as a hobbysist not a criminal!):
Very, very slim. The Police do have the powers to confiscate
equipment that contains Police frequencies (even if it is
turned off). For you to be in such a situation though and
them to be even thinking about this it is most likley you
are in deep !$*% with them for other reasons :-(

Despite the various "stories" that go around regarding people ending up
in trouble or involved in "stings" I do not know (first hand) of anybody
whi was in such a situation. The few cases that are known to have
involved "scanning" have had far more to them than just "listening
to scanners".

Perhaps a UK Scanner FAQ is in order ?

Hope this is of help.

From: jw94@ecs.soton.ac.uk
Message-ID: <3pfg9n$rba@bright.ecs.soton.ac.uk>
Source record: 256388

Can somebody explain to me the technicalities of DVP. I
understand that the voice is digitised via a CVSD modulator and then
encrypted with DES, but then how is this information modulated onto the
RF carrier. I have heard that it is sent via AFSK but I have trouble
believing such a system would work at 16 Kbits/Sec or whatever they use.
Also how is the key management done ? Do the radios have a
session key exchange protocol or are they keyed once and for all ? How
are the keys entered into the radios and are they user programmable ?
Lastly can you have a multi-user net with DVP i.e. can more than
one radio recieve a transmission or are they interactive e.g. ARQ.

Thanks for any info,
John Wigley

2740. No Cellular on recent PRO-51

Newsgroup: rec.radio.scanner

You'd be better off asking around on your local bbs's, because there are
almost as many 10-code lists as there are police departments. Some codes,
like 10-1 (unable to copy) and 10-23 (arrived on scene) are the same.
All of the rest vary from department to department.

>quoting them from memory).

ARCB for Scout v3.1? I don't think Opto sells that.

First, the AR8000 needs to be modified with a sub-mini mono jack which
carries
the RX from the FFC connection and a ground.

The current version of the Scout is 3.1. This is the first bi-lingual
version released from Opto. Upon startup, the user can configure the
Scout to output either CI-V or AR8000 commands. For this configuration,
all that is required is a simple sub-mini to sub-mini patch cable. One
can
either purchase the hardware and make one or purchase a standard 3.5 patch
cable and purchase two adapters from the local Radio Shack.

For those with the Scout v1-3, the Opto ARCX cable is required. This is
a little 'adapter cable' which translates the incoming CI-V command from
the Scout to an outgoing command to the AR8000.

Currently, the ARCX adapter cable is not available. It is expected to be
available in about a month. At Dayton, it was listed on the Opto sheet
for $49, but there are rumors that it might be somewhere in the $35-$39
range.

Erik- Did you pickup the CX12AR interface? I am going to take the mods a
step further and install a second sub-mini jack which will carry the TX
and SS (Squelch Status) signals from the FFC connector. With the two
jacks and the proper patch cables to the CX12AR, I don't have to open
the battery compartment at all!

Another use for those is part of an radio alarm system. Here in Minneapolis some stores, Super America being one, have an alarm that when tripped transmitts a voice message on the police car-2-car channel (channel 4). It says "Burglary in progress, Super-America, <address>" it repeats the message 3-4 times about every minute or so for around 5 minutes. Very few places have this, and I'm surprised that the cops even let any store transmit on one of their freqs, however, I've heard at least 4 differant addresses in the last couple years.

Call the dispatcher on a non-emergency line and ask for the frequencies. If you cant get them from there then call the fire department and ask. if they dont know ask them who services their radios and call the service shop. One of these sources will probably let loose and tell you. The odds are very good that one of the Firefighters is a scanner enthusiast.

IW> Not everywhere else has this law....

IW>Duane

Michigan has this law too, but it ACTUALLY works this way. The law
states that you are not be in in the left lane for any reason other then
passing traffic, and that you must yield to faster traffic comming up
from behind you.

It applies as much to the 45mph person with a 55mph person coming up
from behind as it does someone going 65mph with someone doing 75mph
behind them. Remember, someone else breaking a law does NOT give you
the right to break a law to sop them, or even the right to just ignore
another law because they are too..

Look in the 169-174MHz area. Sometimes the comments betweeen the order taker & filler can also be heard on the main drive thru freq (e.g. 154.600), but because it doesn't run the PL, isn't heard thru the order box.

Sure, it's legal to scan mobile or portable in NJ. Just don't use the
radio to commit a crime. That's what makes it illegal nowadays. But
then, you'd have bigger charges to worry about.....

: went nuts with static!

RF noise output from computer systems can be screen-pattern sensitive.
It's possible that the change in pattern caused a frequency spike that
your receivers locked on to.

Some patterns may also generate quite a larger assortment of frequency
components than others.

Computer RFI is non-trivial.

First thing would be to try to move the radios and the computer further
apart...

Au Contraire, _image breath_!
Your BC300XLT is not receiving *CELLULAR FREQUENCIES*, it's receiving *IMAGES* of transmissions on those frequencies. There's a difference. The question was about the ability to listen to a certain band of frequencies. Your response was about listening to transmissions, *NOT* on those frequencies.

PK> My question: Will this scanner work in the U.S., and what kind
PK> of problems (importing, service, freq ranges, etc) can I expect?
PK> Looking for any advice I can get...Thanks

The scanner will work in the U.S> if it gets here.
It's illegal to import this scanner into the U.S. Any package mailed or UPS'd into the U.S> must have a customs declaration on it, stating (among other things) what's inside. Customs looks at this declaration. SInce the scanner is illegal to import, and Customs knows that, and the declaration states that the scanner is inside the package, guess what? There's a good chance the scanner won't be allowed in, and a possibility it will be simply confiscated.
Now, as a hypothetical situation only, if you were to go to Canada and purchase said scanner, what would be the chances that Customs would search for it upon your return?

Newsgroup: rec.radio.scanner
Date: 1995-05-18 00:00:00 UTC
From: afdemt@aol.com
Message-ID: <3pge1p$bmi@newsbf02.news.aol.com>
Source record: 256425

I want to trade a Motorola HT-1000 16 channel UHF portable radio. I am looking to trade for a scanner.

The Motorola is software programmable at any motorola dealer, 16 channel, UHF, includes heavy duty lapel speaker/mic, quick charger, ni-cad battery and antenna.

Radio is used by me as my personal radio as a firefighter. Radio is in excellent shape, no scratches etc.

I am willing to trade for any of the below scanners, or if you do not have one of the below radios, then leave your offer and I will consider all offers made.

Radio Shack 2006 scanner
Uniden 9000 scanner
Uniden MR8100a scanner (this radio needs to include the software and programming cables)

Please contact me if interested on this newsgroup or by phone at (303) 420-0929.

Thanks, Dave N6RHL

>73, doug

That's already been done. W3IWI has broadcast a differential correction
at a VHF ham freq (145.79) with a standard output that can go directly
into an existing TNC on into the GPS. Worked like a charm. one line
every 30 seconds or so didn't even interfere with the APRS packet
traffic. Same TNC, same VHF radio. (I wish he'd make it permanent.)

There is super precise time built into the basic GPS signal from the
satellite.

A good reference is GPS documentation that comes with APRSxx.ZIP
available from, inter alia, ftp at tapr.org. See the file GPS.TXT
buried in the README subdir when you unZIP APRSxx. (APRS is a great
program itself).

2784. Re: Pro-2004 Help!!!

Newsgroup: rec.radio.scanner
Date: 1995-05-19 00:00:00 UTC
From: von1@ix.netcom.com
Message-ID: <3pikvh$3fk@ixnews3.ix.netcom.com>
Source record: 256230

I purchased and modified a Pro-2004 (the simple Cell mod of clipping a diode) several years ago. Several months after use it began sounding muted and I could not get full volume. I checked the speaker and the circut board but I could not find any obvious problems. Connecting another speaker and/or an external speaker did not make any difference. This problem seemed to come and go for awhile, now it's mostly here to stay. Does anyone know what the problem may be from their own experience with this scanner? I obviously can't it take back to Radio Shack. Is there somewhere else that may be suggested? I live in the Claremont, CA. area.

Thank you for any help you may provide.

Dave.. (Von1@ix.netcom.com)

Source record: 256233
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Generally the 225-400Mhz range, but you'll need a good freq directory.

I have found a lot of mil activity in the 138-144 Mhz range and also the 30-33 and 40-42 Mhz range. Plenty of mil training live fire missions involving all craft (aircraft, tanks, FAC's, command centers). Pretty neat listening. All the action spreads from Lo-VHF to UHF.

Start with a good military freq directory and get ready to punch in a few hundred channels.

Andy

Dave,

I have three PRO2004s and had the same problem. For my units I had to replace the capacitor that is in series with the speaker driver and the speaker. It has been awhile since I made the repairs, but as I recall it is a large value, polarized, electrolytic capacitor. I think that I used a higher voltage rating non-polarized part for the replacement. If you don't have the service manual you can order it for less than 10 bucks from The Shack.

I think that you can plug an earphone into the radio and vary the volume to verify that something in the audio power amp stage has gone bad. This step can help to isolate if it is indeed the power amp or something in the audio detection stages. Hope that this helps.

I also have a 2003. It is an excellent radio. To program: press manual plus
a number to go to the channel you want to program. next press program.
enter the frequency. press enter. That channel is now programmed with that
freq.
to search a range, use the "limit" switch and the up and down arrows.
This unit is a little slow and hard to program by todays standards, but I
find it gets excellent reception and had good audio. The fm broadcast
capability is useful sometimes. It is a very useful rig, but of course no

2800. RS Pro-26 & BC 3000XLT have same guts

Newsgroup: rec.radio.scanner
Date: 1995-05-19 00:00:00 UTC
From: ab@ntmtv.com
Message-ID: <D8uCKL.AG2@ntmtv.com>
Source record: 256246

I dropped by Scanners Unlimited (a nice store in San Carlos, CA),
and heard what I've already been starting to suspect.

I was in looking at and comparing the hottest new handheld scanners
from Radio Shack (Pro 26) and Bearcat (3000XLT) and the proprietor--
who is *very* helpful by the way--explained that they are essentially
the same radio.

There are *some* differences, but they are pretty minor stuff.

First of all, the radios look different. The 3000XLT is physically
a little bigger, and its key pad has larger keys and is spread over
a slightly area. The 3000XLT uses a costly NiCad battery pack and
the charge plug is on the back. The Pro 26 takes 4 standard AA cells
and so can be used with standard alkalines or NiCads. Both scanners
basically run off a nominal 6 volts. The external power plug on the
3000XLT wants 12 volts and the Pro 26 plug wants 9 volts--they both
step it down internally. The Pro 26 offers both a charge plug and
a power plug--like most all RS scanners before it (you need the power
plug in case you have non-rechargeable batteries inside). The
3000XLT only has a charge plug since it only allows for its custom
NiCad battery pack.

The Pro 26 has 200 channels (10 banks of 20) while the 3000XLT has
400 channels (2 x 10 banks of 20). On the 3000XLT, banks 1 - 10
are the same as on the Pro 26 and you have to use a "shift" key
to access channel banks 11-20.

The Pro 26 has the traditional Radio Shack/Realistic programming
method where you go into program mode in order to program channels.
On the 3000XLT, you just type a frequency and hit enter--just like
on all Bearcats before it.

The Pro 26 only has one priority channel, while the 3000XLT has 10.

They both have auto-sort and latched lights and 300ch/sec turbo search
(only when going in 5kHz steps) and 100ch/sec scanning. They both
have data skip and selectable 2 or 4 second delay. They both have
selectable signal attenuation on a per-channel basis. And I believe
they both have a user-selectable keyboard beep function (I didn't
verify if the 3000XLT did, but I know the Pro 26 does.)

The 3000XLT has this "gee-whiz" feature (which I'm sure *somebody*
might find useful) called count. I'm not sure of all the ins and
outs of how it works, but it is used to keep count of how often the
radio stopped on a certain channel or frequency.

The Pro 26's backlight is orange/amber while the 3000XLT's is green.

Other than the two legally-mandated cellular gaps in the 800 MHz range, the Pro 26 offers continuous coverage from 25 MHz to 1.3 GHz.

I opted for Pro 26 due to the size issue (I liked the smaller size and shape) and because I don't need/want 10 priority channels (one is enough!) and because I don't need/want 400 channels (200 is plenty!) and because I hated the idea of the "special" BC NiCad battery pack. I feel the ability to use 4 standard AA cells is a big advantage. With the Pro 26, if I want to use AA NiCads I have the option of charging them in the unit by plugging the AC adaptor (not included--$6.95 from RS) into the "Charge plug", or I can charge them externally using any one of many cheap and readily available NiCad chargers on the market. I didn't like the 3000XLT's charge plug placement--it's awkwardly on the back of the unit! I prefer a side plug. Lastly, I am used to owning Radio Shack/Realistic scanners and I suppose I have a bit of brand loyalty going...

Both scanners are seem like they're excellent though. I can't figure out why RS publishes stuff like sensitivity specs in the Pro 26 manual and Bearcat does not in the BC3000XLT's manual...

They seem like they use the same guts though...

Nice try, guy, but he's trying to do the audio-improve mod, not the cell-restore. Though I daresay that the folks who have been hesitant about doing the cell-mod will be a bit more comfortable giving it a try with that pic to show 'em where to look.

I did the Audio-improve on mine, and this guy seems to be having the same trouble I did, namely "Where the heck did they put the darn thing?"

I had a service manual when I did mine, and it didn't help a lot, since I had a hard time findig the capacitor that needs to be yanked on the parts-layout sheet. (Poor image contrast -- I couldn't make out what part was what in that area) I finally figgered it out and did the mod. I'm not sure I notice any real difference, though. Then again, I *AM* a bit hard of hearing, especially in the higher range of most human voices, so for me, it may well have been a waste of my time and effort right from the git-go.

As for the fellow asking, get down to the second board in your rig, and hunt in the upper left corner (it's within a square about 3/4 inch on each side, with the top and left edges of the board being two of the sides of the square) for a *small* black widget. You might need a magnifying glass to see it, but the one you're looking for has "333" marked on it. That's **NOT** the part you want to pull! Look at the next component towards the bottom of the radio from that resistor. You're looking for a tiny (about the same size as the resistor) tan rectangle that might have silver ends on it (or might not -- I've seen 'em both ways) that has no other markings. That's C41. Desolder it and put it someplace safe if you think you might want to someday "undo" this mod. Or, if you're sure you're never going to want to put it back in, just take a fine-tip pair of

extra-fine-tip needlenose pliers, reach in, and crush the little bugger where it sits. (Make sure you get *all* the bits out of the radio before you put things back together if you go that route, though) Either way you go, you should get some iprovement according to all reports that I've heard. Like I said above, I *don't*, but that may very well just be my hearing loss. Enough other people have said it makes a dramatic improvement for them that I tend to believe that it will for anybody who isn't losing their hearing.

Yo, kids! Take it from someone who's been there: That rock-n-roll at high volume really WILL make you go deaf! Not that I don't still like rock, but I wish I'd listened at a lower volume when I was younger...

Standard disclaimers apply. I'm telling you HOW to do it, not TO do it. If you go in and follow my advice, all should go well, but since I can't be there to hold your hand through it, I don't accept any responsibility for anything that goes wrong, including but not limited to: your hair falling out, your dog not liking you, lightning striking you dead on the spot, or your radio exploding.

The 200XLT is a fine scanner. It does not have all the features of some of the newer scanners, but it is a solid performer. The other Handhelds I would consider from Uniden are the 220XLT (which is the replacement for the 200XLT). It has great features. It has some minor problems with images, but overall it is a nice unit. The Top of the line 3000XLT is more expensive, but one of the best handhelds available today.

Sorry, listening to cell calls is illegal, no matter WHERE you find them.
The EPCA says so. The TDDRA made it illegal to import or manufacture in the
US cell frequency capable scanners.
Federal rules also say you are able to listen to ANY transmission long
enough to identify its source.
"Is *THAT* a cell call? I wasn't listening long enough to be sure..."

A thought comes to mind...
Any of the places that specialize in making the custom, in-the-ear hearing
aids should be able to do this for you. Here, it could even be done at a
local Price Club, as they pour the molds right in-store.
it can't be that difficult to make one of these with just a speaker in it.
Maybe a speaker out of a pair of in-the-ear bud-type earphones?
Hope this helps.

MK> Of course, once it's here, who knows what you do with it.

Actually, I can't find anywhere in the rules or law to support this. The
TDDRA-inspired changes do not mention anything about "for sale". Importation
of such scanners is forbidden, period. Personal-use importation is not
mentioned at all.
I have no idea of how Customs is actually handling this, and, truth to tell,
I don't really want to find out first-hand, either ;-).

PC> Anybody have a list (or source) for standard police "ten"
PC> codes? Thanks.

Sure, here goes:
These are the standard APSCO (Associated Public Safety Communications Officials, inc) 10-codes. There is no law or rule making these codes "official", but most PS stations use them as-is.

10-1 Signal Weak 10-19 (in) Contact
10-2 Signal Good 10-20 Location
10-3 Stop transmitting 10-21 Call ( ) by phone
10-4 Affirmative (OK) 10-22 Disregard
10-5 Relay (to) 10-23 Arrived at scene
10-6 Busy 10-24 Assignment completed
10-7 Out of service 10-25 Report to (meet)
10-8 In service 10-26 Estimated time of arrival
10-9 Say again 10-27 License/Permit info
10-10 Negative 10-28 Ownership info
10-11 ( ) on duty 10-29 Records check
10-12 Stand By (stop) 10-30 Danger/caution
10-13 Existing conditions 10-31 Pick up
10-14 Message/information 10-32 ( )units needed (specify)
10-15 Message delivered 10-33 Help me quick
10-16 Reply to message 10-34 Time
10-17 Enroute 10-35 to 10-39 reserved for future
10-18 Urgent assignment by APCO.

From 10-40 and up can be designated by the user.
Remember, this is a list that APCO uses; not ALL P/S departments are members of APCO, and so this list may not be in use by some departments.
List gotten from the RCMA Scanner Journal (PO Box 542, Silverado, Ca. 92676). Also, POLICE CALL, available at Radio Shack, also carries this list, along with a lot of P/S frequencies for your area.
Hope this helps.

And, if you are handy with a soldering iron, you can purchase nicad
batterys from Radio Shack with the lugs soldered on, and it is a simple
matter to replace the nicads inside with new ones to re-build the pack,
rather than pay up to $49.00 shipped for a new battery.
I understand that you can purchase the nicads pre-wired, ready to solder in
just two wires, but I have not found a source. The nicads from RS cost
about $15.00 plus tax, the job should take no more than 20 minutes.

Mr. Cooter - now that mhb@netcom.com has given you the =cellular modification=,
I'll give you the one you want.

If you open up the back of the scanner, then take off the main chassis [I did
it using the non-soldering-iron technique where you just disconnect the chassis
from the face of the scanner], on the board that [was] facing the front of the
scanner, either in the top left or top right you will see a miniscule object
marked "333". Next to it there should be something else.. in mine, I was
surprised to find that C341 [or whatever the capacitor is] was not there to
begin with. Anyway, beside 333 in parallel with it is this C341 [maybe] and
that's what needs to be removed.

My suggestion is to find a more detailed mod than I can explain to you here. I
take no responsibility for anything that happens [not even to my own, and I had
it down to the individual boards].

Yes, they're VHF radios. The crew of the Capitol would use the following
frequencies:

San Jose to Santa Clara (CP Coast) - 160.815, Caltrain Road
CP Coast to Oakland (Magnolia) - 160.32, SP Road 2
Oakland to Sacramento or Roseville - 161.55, SP Road 1
Onboard Services (used between crew members on the same train) - 160.44
or 160.455.

I have a TROPEZ 900mhz phone for about a year now and I have much less static than from the 46mhz phones. The major differences I noticed was that the receiving volume was less and the
batteries gave out a lot quicker. Of course the range is a lot farther.

Just my observations.....

: Isn't it also true in COLUMBUS <OH that ANYONE can get the Motorolas if
: they pay the dollars.
: That was a rumor around about that.

Sorry, I have to agree that if you have the money, you can get what
you want. YOu may get something you don't want along with it also.
(like jail)

I would like to further research this topic of the media and
radios, because I think it would fall under the FOIA or access to
information of people who serve the public. I don't know what
context it could fall under, but usually it does ultimately
come down to public relations from the media -- or particular station
that wants to have good relations with the head of a department or
otherwise. If the public relations are there, certain groups,
(media) can gain access to whatever they wish, so long as they
know the right people!

->

Why in the world would you want to decode digital pages? All they are are phone numbers! Granted, there are a few alphanumeric messages scattered in with the numeric pages, but they are usually short.

Also, not all of the digital paging information you hear on the paging channels is simple POCSAG, there are several speeds of POCSAG paging, the old standard, 1200 baud, and 2400 baud POCSAG. It's not even all POCSAG, some of it is GSC (a proprietary format owned by Motorola), and the newly introduced FLEX protocol (also owned by Motorola) which allows for data rates of up to 6400 baud.

The POCSAG paging format is in the public domain, and anyone can get a copy of the standard. GSC isn't in the public domain, andyou would have to pay Motorola for this information, and I'm sure that there would be some sort of legal agreement that would have to be entered into.

I work for a RCC paging company, so I know a little about this stuff. I don't think it is worth the effort.

2827. Re: whats a good 900hz phone?

I have tried several 900 Mhz phones, like the Bel-Tronics, Panasonic, Uniden, and Tropez. The Tropez gives me the best range, I can go down to the street corner. The others started getting staticy when I start walking away from the drive way. The only problem with the Tropez is that the battery life is short. It lasts about 1-2 days off the charger, and shorter if you use it a lot.

2828. Re: Mobile Scanners in NJ OK?

Yes..these gents are correct! The NJ scanner law has been repealed and replaced by a law that prohibits you from using a scanner during the commission of a crime. I would not worry about confiscation from a police officer! I dont recall us giving police officers confiscation powers, except for contraband material such as drugs and stolen items in your possession.

I'm way out of expertise on this (as well as much else), but while the
timing of the original GPS signal is critical - and precise, I don't
think it makes much difference in the time of arrival of the differential
since the SA jiggling is only relatively slowly varying. Updates every
30 sec seem fine.

2836. Apartment Balcony mobile-vs-discone antenna

Newsgroup: rec.radio.scanner
Date: 1995-05-19 00:00:00 UTC
From: bobszabo@ix.netcom.com
Message-ID: <3pi1a4$bcf@ixnews2.ix.netcom.com>
Source record: 256361

I would like to know if someone can tell me why these 2 antennas are acting the way they are. I picked up an inexpensive Hustler Discone(23.95) and though it might be better than the mobile antenna I am now using. In some cases it is better, in some it is not. The main area I would like to receive from is D.C. My balcony does face that way and it is about 30 miles away. I am in a town that is very high up but I am in a hole with a hill full of trees behind me. (I know, a bad place to be) My balcony has a wood floor and ceiling the building is aluminum sided. The mobile antenna is an all bander. It is mounted on a metal plate hanging over the balcony. The discone is on a wooden mast with 2 of the radials hanging over the balcony. Neither one of the antennas has an earth ground. I know I can only receive so much from this location. I just want to get the best reception I can though. Below is what I have found and some of my thoughts any help will be appreciated.

1. The discone picks up AM better. (air and CB)
2. The mobile picks up D.C. Capitol Police better.(160MHZ range)
3. The discone picks up "some" stations on 40-50MHZ better.

Could it be that:

1.The discone is somewhat directional being close to the building. If it were though I would think that the Capitol Police would be coming in better.

2.The mobile can bring in a signal from over the hill better. I know that line of site is the general rule but I can hear DC, its just better on the mobile antenna.The stations that are better on the Discone could be on my side of the hill. I haven't determined there location yet. The repeater for DC Capitol police could also not be in DC. Something I need to find out.

3. Being only 23.95 the Hustler discone is not that good. It only has 3 cone elements and 3 disc elements. No verticle element.

4. The discone won't work very well being so close to the aluminum building.

Like I said I would appreciate any thoughts on this. I was hoping when I compared them that one would be clearly better than the other. It seem I may have to use them both, depending on what I want to listen to.

Encryption of the human voice is a complex and intricate procedure
that is accomplished
by one of two methods: analog or digital. The human voice, for the
most part, occupies the
frequency range from about 100 Hz to 3 kHz, forming complex analog
waveforms and patterns.
Analog speech encryption can be as simple as speech inversion, where the
human voice is
"inverted", resulting in the radio traffic sounding like a popular
Disney character, or quite complex,
with the voice split at about 1500 kHz, inverted at both ends, with the
center carrier swept randomly
up and down several kHz from the center transmit frequency. Digital
voice encryption requires that
the analog signal be sompled, digitized and encrypted, transmitted, and
decrypted in real-time.
Since complex analog encryption is rather rare, our focus will be on
digital encryption products
manufactured by Motorola, Inc.

Analog Encryption Types and Products

Since speech inversion is easily defeated (the Ramsey Electronics
SS-70), most law
enforcement agencies have ceased using this encryption technique. I
know of no federal agency
that has ever used analog encryption devices. These simple, low-cost
devices are more suited to
the local police department, since all but the most serious scanner
owner will not be able to
understand the radio traffic. One of the largest manufacturers of
analog encryption devices, Midian
Electronics, offers a complete line of products from the simplest and

smallest speech inversion
scrambler to a highly sophisticated "rolling-code" encryption device.
Contact Midian Electronics at
1-800-MIDIANS for further information on their line of analog voice
encryption products.

MotorolaTM Encryption Protocols and Products

Although there are still some analog Motorola encryption devices
still in use, including
simple speech inversion products, the majority of devices currently in
use are of the digital variety.
All Motorola voice privacy protocols are referred to simply as
"SECURENET", which is a general
term that Motorola uses to identify it's digital encryption products.
There are three different basic
encryption protocols, two of which have two distinct variations, for a
total of five unique (and non-
compatible) encryption protocols. Each of the five protocols uses a
field inserted "key", which is
what makes the communications secure. Since the author is not a
cryptographer, it is simple
enough to understand that without the proper encryption "key" loaded
into your radio, all that you
will hear is white noise, or static, when encrypted traffic is being
passed between radios.

The Original Propreity Encryption Algorithm, DVP

DVP, a term that Motorola coined for use with their initial entry
into the digital voice
encryption product field, is a proprietary Motorola protocol that uses a
self-syncronizing encryption
known as cipher feedback. Depending on who you ask at Motorola, DVP
actually has two different
meanings. DVP stands for Digital Voice Privacy or Digital Voice
Protection, same encryption
protocol, different terminology. The basic DVP protocol is capable of
2.36 x 1021 different "keys"
to ensure protection for your voice conversations.

Data Encryption Standard

In the middle 1970's, the federal government finally decided that
they needed to
standardize all federal agencies on a common encryption protocol to
protect sensitive, but
unclassified data. Several different schemes were submitted, but the
one approved by the National
Bureau of Standards was a protocol that became the Data Encryption
Standard, or DES. Broaden
your mind for just a minute and forget about radio traffic. There are

several other forms of
communication and data that must be protected from prying eyes (and
ears). IRS records, Federal
Banking data, etc. is not "classified" in the military sense, but does
require protection nonetheless.
This Data Encryption Standard, once standardized, would allow all
federal agencies to use the
same encryption protocol, allowing them to intercommunicate when and if
the need should arise.
DES is capable of using 7.2 x 1016 different key combinations and uses a
self-synchronizing
method of encryption known as cipher feedback. Just remember, DES is
not authorized to encrypt
communications or data that is classified in the interest of national
security, but we'll get to that in
just a minute.

So, we just learned the two baisc types of Motorola encryption, DES
and DVP. In a
nutshell, DVP was designed to be used by anyone who needed protection
from unauthorized
eavesdropping, including local government and businesses. DES, on the
other hand, was
designed to be used only by the federal government. Availablity of DES
products was supposed to
have been severely restricted to federal government agencies and
military personnel only, but a trip
to any large hamfest will always yield at least one person selling
SECURENET products and
radios.

Variations of the Originals

After DVP and DES products gained acceptance and their use became
widespread, a
glaring flaw became obvious. When using their radios in the encrypted
mode, agents noticed that
their radios did not seem to transmit as far as they did when in the
clear mode. In a flurry of
commotion and denial, Motorola quickly went back to the drawing board
and found out that sure
enough, use of the original DVP and DES protocols did limit the range of
the radio, sometimes as
much as 30%. In response to these complaints, two new variations of the
original protocols were
introduced, each with the added acronym "XL", leaving us with four
distinctly different encryption
protocols: DVP, DVP-XL, DES and DES-XL. The "XL" variations eliminate
the range loss problem
and in the case of DVP-XL, the number of available "keys" is increased
to 7.9 X 1028. DVP-XL and

DES-XL both use a different type of encryption known as counter addressing. Just remember that
all radios must use the exact same type of encryption to inter-communicate in the secure mode
(DVP-DVP, DES-XL-DES-XL, etc).

Digital Voice International

The fifth unique encryption protocol, is known as DVI-XL, or Digital Voice International.
Since DES products require a munitions license to export from the U.S., DVI-XL allows other
countries to enjoy the same type of encryption as DES-XL, but with a reduced number of available
keys. DVI-XL is not common in the U.S., although is quite common in countries such as England.

The Key Variable Loader

If you've been reading the above thoroughly, you may be asking yourself "Well, how do you
get the "keys" into the radio?". Good question, so let's talk about it. The device used to load these
encryption "keys" into a radio is known as a "Keyloader", or in Motorola-speak, a "KVL", or Key
Variable Loader. This is a hand-held device that looks similar to a radio, but allows the operators
use to insert the "keys" into the encryption devices of the individual radios. The KVL attaches to the
radio with a special cable and attaches to the interface port of the radio. The individual actually
enters numbers (and letters, depending on the protocol) into the KVL to produce the "key" to your
radio traffic. The KVL transcribes your input of approximately 20 characters into the "key" that is
loaded into the radios. KVL's are capable of storing about 16 "keys" in non-violatile memory,
allowing radios to be loaded when desired. Since access to the KVL constitutes access to the
entire system, these devices are usually closely guarded at the radio shop. There are five different
KVLs, one each for DVP, DVP-XL, DES, DES and DES-XL and a separate KVL for DVI-XL. Newer
loaders are made to support both DVP and DVP-XL and another to support DES and DES-XL
(Two protocols with one loader). It is rumored that there is a "super KVL" that will load any of the
four domestic encryption protocols, but the author has never seen one, and it is not listed in any
Motorola literature.

Advanced Encryption Products

More recently, there have been solutions to nagging problems in some
of the larger cities.
For example, lets say that you have to manage the entire Drug
Enforcement Agency radio system
in the south Florida area, which is probably quite a large fleet of
radios. You basically have two
choices, either you have one person whose only task is to keyload radios
all day, or you issue each
office a KVL and allow them to do it themselves. As we spoke about
earlier, if you increase the
number of KVLs, you increase the possibility that one will be lost or
stolen, not to mention the fact
that KVLs are outrageously expensive ($3000+ each) to purchase. Enter
OTAR, or Over-The-Air-
Rekeying. Quite simply, you have one dedicated computer, called a Key
Management Controller,
or KMC, which centrally manages all of the encryption "keys". OTAR is
available for any one of the
five available encryption methods as an add-on component. OTAR allows
radios to have new
encryption keys loaded into them over the air, just as the name
suggests. Encryption keys can also
be erased over the air in a process called "Key Zeroization". If a
radio is lost or stolen, all of the
radios in the system except the lost or stolen one can be instantly
re-keyed over the air. Also, lets
say that you are about to raid a clandestine drug laboratory and you
accidently remove your radios
battery, thereby erasing the encryption key. No problem, the KMC can
immediately download the
encryption key back into your radio before you bash down the front door!
The KMC can also
download the available system keys into KVLs by phone lines so that
encryption keys may be kept
locally should the radios be out of the range of the KMC when new keys
are sent out. The other
part of Advanced SECURENET is "Multikey", which is the ability to store
multiple encryption keys in
one radio. Most radios can only hold one encryption key at any one
time. If you have two separate
groups who don't intercommunicate, multikey allows supervisors to have
both encryption keys in
their radios and converse with both groups, but individuals in the
separate groups cannot monitor
each others conversations. Some radios, when equipped with Miltikey,
can have as many as 16
different encryption keys.

The Future - Classified Radio Communications

As we previously mentioned, even with the high level of security
offered by the Data

Encryption Standard, no classified traffic may be encrypted with DES. A new type of encryption, known as Facinator, offers the government the ability to encrypt land-mobile and other radio traffic up to the level of Top Secret. Facinator is a completely different algorithm whose details are still classified. The U.S. Secret Service is reported to be using Facinator in their Motorola Saber UHF radios for executive protection and security details.

Motorola's latest development, the "ASTRO" TM system, is capable of transmitting either analog or digital voice, clear or secure, conventional or trunking. This system is currently being installed in south Florida for the Florida Highway Patrol on 800 MHz trunking (without much success, I might add). LAPD is also switching over to the Astro system and most reports received so far indicate that the system works fine.

The Radios

Digital voice encryption is not a cheap endeavor. There are several Motorola portable and mobile radios that offer SECURENET as an option. Even a 15 year old Motorola MX350S portable radio that has DVP is about $350 used. These are 4-32 channel models that are quite large and cumbersome, but incredibly durable. The most popular is the SaberTM portable radio. Although still large and bulky, the Saber offers many options and is still the top-of-the-line portable radio. The Saber comes in three different varieties, known as Saber I, II and III. Both SECURENET and non-SECURENET radios are available. A Saber I has 12 channels and no display; a Saber II has 72 channels with three buttons and a display; a Saber III has 120 channels, a full keypad and a display. Additionally, Saber II and III radios offer scan capabilities. A used Saber III with voice encryption installed goes for about $800 on the used market. Not bad, considering that current list price is over $3000! I cannot stress enough the importance of being extremely careful when you purchase a used radio. Be careful, and be sure you get a reciept.

Repeaters and SECURENET Products

Using digital encryption does have it's drawbacks. The common repeater, which consists of an input frequency and output frequency, normally uses some sort of Continuous Tone Coded

Squelch System, or CTCSS, trademarked as Private LineTM (PL) by Motorola or
ChannelGuardTM by General Electric, to prevent unauthorized or inadvertent access to the
repeater. Well, to put it simply, you can't send a CTCSS tone with any form of digital encryption.
There are two ways around this shortcoming; either the repeater does not use a CTCSS tone,
which is called a transparent repeater, or a repeater such as the Motorola MSF5000TM is used.
The MSF5000 can be operated in the transparent mode, which allows both clear and secure
transmissions to be passed, or the repeater itself can be keyloaded with the same encryption key
as the radios, allowing only those transmissions with the proper encryption key to be re-transmitted.
It is commonly said that most open (no PL) repeaters will not pass digitally encrypted voice. This is
simply not true. The repeater will pass the digital signal, which actually has a narrower deviation
than regular FM voice, just fine. Whether or not the signal is still intact enough for decryption is the
big question.

Conclusion

It is clear that monitors will probably never be able to eavesdrop on digitally encrypted radio
traffic, but I hope that this short introduction to the many facets of encryption products available
helps you to better understand their use and operation. The fact remains, however, that it will be
many years before the home computer advances to a stage that scanner owners can decrypt a
secure radio transmission.

Note: Many of the terms used in the above article are trademarked by Motorola, Inc. including, but
not limited to: SECURENET, DVP, DVP-XL, MX-350S, MSF5000, Saber, OTAR, and PL.

The Tropez receiver "polls" the base every few seconds to make sure
it isn't out of range. This may be nice if you're way out of the house
but it sucks the batteries big time. You can't leave it off the base
all day without having dead batteries. It would be nice to find a way
to turn off the polling feature.

2842. SportCat 150 stuck in display test mode

Newsgroup: rec.radio.scanner
Date: 1995-05-19 00:00:00 UTC
From: jbd@spcfs2.nsc.com
Message-ID: <D8ttzJ.JIH@nsc.nsc.com>
Source record: 256367

Just for the heck of it, I tried the L/O + 2 + 9
keyboard sequence on my SC150. It went into the
display test mode like a PRO-51 in test mode 3.
Now I wonder how to return to normal operation
since the second part of the sequence doesn't
appear to have an effect on the SC150, i.e. it
stays in display test mode.

: Isn't it also true in COLUMBUS <OH that ANYONE can get the Motorolas if
: they pay the dollars.

: That was a rumor around about that.

: Universal Radio said they heard that but would not or could not CONFIRM it.

Well, buying the radio is certainly no problem, they are readily
available. The trick..... programming. I'm not saying it is impossible,
but one would have to have both the software, and the specific programming
information. I don't think the local commercial firms would do it, and
you would have a tough time talking the city into programming it without a
valid reason (I know them :-)), but like anything else in the world, I
suppose it could be done...........

A discone antenna has unity gain. I offers no gain across a wide spectrum. You didn't say what frequency the "other" antenna was cut for, but i suspect it will work better at its resonant frequency and multiples of, while the discone will perform better at all other frequencies. Cap ploice ar on 800mhz? Consider getting a yagi cut for 800 and point it at DC.

2845. cellular + scanner = same antenna?

Newsgroup: rec.radio.scanner
Date: 1995-05-19 00:00:00 UTC
From: Harold Peach <hpeach@pop.uky.edu>
Message-ID: <3pi9dk$9fl@service1.uky.edu>
Source record: 256370

I travel quite often for work and carry a cellular telephone with an external magnet mount antenna. A friend has done some tests and found that the typical cellular antenna loads up nicely on 2m and 70cm - translation: resonant enough across most bands for scanner work. Years ago I had an Antenna Specialists antenna that allowed me to transmit on a ham/business band radio through my AM/FM radio antenna.

This led me to think about the possibility of hooking my scanner to the same antenna as my celluar, therefore minimizing the number of antennas on my company car and my conspicuousness to those I might encounter along the way. (You know that a car with more than just an AM/FM antenna and cellular antenna places you within certain FBI and local law enforcement profiles?)

The question is, does anyone already make a "splitter" to do this? I am sure I could roll my own low pass filter for the scanner and a high pass filter for the cellular, but I would rather buy one that someone else has already designed and tested.

2846. ICOM R1 4 sale

Newsgroup: rec.radio.scanner
Date: 1995-05-19 00:00:00 UTC
From: mgilchrist@fortmyer.gannett.com
Message-ID: <3pi9u5$1nta@news.gate.net>
Source record: 256371

ICOM R1 (worlds smallest scanner), used VERY little, mint, in box, manual
BP-90 Alkaline battery case
BP-84 Triple life battery
BP-90 leather case
BP-84 case
CP-12 cigarette lighter adapter

I have too many scanners. (R7100, AR8000, ...)

I have close to $900 in the whole deal. Will sell for a slice of that.
Best reasonable offer takes the whole lot.

2847. APS-104 4 sale

Newsgroup: rec.radio.scanner
Date: 1995-05-19 00:00:00 UTC
From: mgilchrist@fortmyer.gannett.com
Message-ID: <3pia4a$1nta@news.gate.net>
Source record: 256372

You've seen it. You've wanted it. Here it is.
Optoelectronics APS-104 preselector. Sells for a grand! I have one used very little. Original box, manual, user generated tuning chart. Works great with the Interceptor or the Scout. Dramatically increases the range of near field devices.

Best reasonable offer takes it. I will sell for a slice of the original $995.00!

2848. 2) GRE Super Converters 4 sale

Newsgroup: rec.radio.scanner
Date: 1995-05-19 00:00:00 UTC
From: mgilchrist@fortmyer.gannett.com
Message-ID: <3piabr$1nta@news.gate.net>
Source record: 256373

I have both the Super Converters: One for a table radio, one for a handheld.

You can tune 800-1000 MHz by tuning 400-600 on your receiver! Get cellular coverage for your scanner.

Both units are in mint condition, in original boxes. Best reasonable offer takes them!

2849. Re: Scanning of Cordless Freqs, is it legal?

>
> kcc@bix.com

Well, you can _scan_ that band all you want, however, the amendment says you can't _listen_ if you hear someone talking on a cordless phone. That's me; I always turn off he volume when I think it might be someone talking on their cordless. [; Don't worry, I think the feds probably have enough on their hands, what with Okla. City bombs, tanks in SD, etc....

Thaks for the reply:

"The mobile antenna is an all bander." -from my original post

It is the Radio Shack mobile with the two coils.

>The mobile will work better at its resonant frequency and multiples
of, while the discone
>will perform better at all other frequencies. Cap ploice ar on 800mhz?
Consider getting
>a yagi cut for 800 and point it at DC.

How big is a Yagi I only have a balcony. Would a beam work any better pointed at the trees and hill in back of my apartment? The Capitol Police are on the 160.000 range. These are not the Metro DC Police they are a goverment department.

This isn't graffiti; it's INFORMATION. Information I want to know about
without reading every damn newsgroup known to man.

I live in this neighborhood, too, and I want to hear about new products
like this one. So don't stop posting.

>This graffitti should be seen in rec.radio.swap where there is no
>confusion about the commercial nature of the offer.

See above.

All you self-appointed arbiters of good taste waste more bandwidth whining
than some of the worst spammers!

Just use a filter or an agent or something if you don't want to know
about new products. You can program your reader to just pass whiney-assed
complaints about posting "commercial" info, then you'll be happy as
a(n uninformed) clam.

2853. COAX cable characteristics TABLE

Newsgroup: rec.radio.scanner
Date: 1995-05-20 00:00:00 UTC
From: wa2ise@netcom.com

COAX TABLE

Got out the Belden & Pasternack catalogs.
Far as I know, the RG numbers look random. Probably assigned by a clerk
in the Pentagon during WW2. Below is a short table
of the various coaxes and the more important characteristics.

impedence attenuation per 100' velocity max voltage RMSkv
@ 50MHz @ 1GHz
RG6U 75 1.5 dB 11 dB 78% (foam) 0.6kv
RG8U 52 1.2 9 66 (polyethlene) 5kv
RG8U 50 1.1 78 (foam) 0.6
RG8X 50 13.5 2.5
RG11U 75 1.3 9 66 (poly) 5
RG11U 75 1.0 78 (foam) 0.6
RG55B/U 53.5 16.5 1.9
RG58U 53 3.1 20 66 (poly) 1.9kv
RG58U 50 3.2 78 (foam) 0.2kv
RG59U 73 2.4 11.5 66 (poly) 2.3
RG62U 93 1.9 8.5 84 (air & poly) 0.7kv
RG59U 75 2.1 78 (foam) 0.3kv
RG71U 93 1.9 8.5 84 (air & poly) 0.7
RG108A/U 78 26.2 1.0
RG122U 50 4.5 29.2 66 (poly) 1.9
RG140U 75 13 2.3
RG141U 50 2.1 13 69 (teflon) 1.9
RG142U 50 2.7 13 69 " 1.9
RG178U 50 10.5 45 69 " 1.0
RG179U 75 8.5 25 69 " 1.2
RG180U 95 4.6 16.5 69 " 1.5
RG187U 75 8.5 25 69 " 1.2
RG188U 50 9.6 30 69 " 1.2
RG196U 50 10.5 45 69 " 1.2
RG303U 50 2.1 13 69 " 1.9
RG302U 75 13 2.3
RG316U 50 9.4 30 69 " 1.2
RG393U 50 7.5 5
RG400U 50 13 1.9
RG401U 50 7.5 (semi rigid) 3
RG402U 50 13 " 2.5
RG405U 50 22 " 2
RG174U 50 6.6 31 66 (poly) 1.5
RG210U 93 3.1 0.75

RG213U 50 1.6 9 66 " 5
RG214U 50 1.6 9 66 " 5
RG217U 50 5.8 7
RG218U 50 3.8 11Kv
RG219U 50 3.8 11
RG223U 50 3.1 16.5 66 " 1.9
RG225U 50 7.5 5
RG9U 51 1.6 66 " 5
ethernet 50 1.2 78 (foam) 0.6
22B/U 95 twisted pair 2.1 66 (poly) ?
twin lead 300 0.8 <-worse when wet! 80 (poly) ?
8281 75 9.2 2.9
9913 50 4.5 0.6
9914 50 6 0.6
8218 75 20 0.6

these are all the RG#'s I found. The attenuation curves generally follow a straight line when drawn on log-log graph paper. The slope is such that a coax with 2dB at 50Mhz will be 0.8 at 10Mhz. Most coaxes have about the same slope. So, one need only look at the same freq when comparing attenuations when selecting which coax you're gonna use from under the shack table (not strictly true, but close enough for "goverment" work! :-)). Voltage ratings: note that foam dielectric cannot take as much voltage as solid dielectric.

>30 sec seem fine.

I was under the impression that SA was implemented by injecting
pseudo-noise in the signal. While the *average* delta might be
slowly changing, any given reading could be the maximum dither
distance from the previous or following reading in a pseudo-random
number fashion. That means the correction transmited only applies
to the particular coincident reading taken at both the reference
and mobile station locations. It might represent a maximum error
in position if applied to the preceding or following reading.

I HAVE owned an R1.

I really am tired of R1 bashers. How many have actually owned or ever used an R1? Like ALL radios, it has its detractors. The main detractor in the R1 was the poor selectivity. This is not a problem for some since they do not live in high RF areas with stronger signals that tend to bleed over. It is (by far) the most compact and well-built handheld scanner ever made. I reluctantly parted with mine because I needed the money, but I'll probably buy another some day. From now on, if you feel a need to bash the R1 (or any radio) please preceed your OPINION with your EXPERIENCE. Or at least say 'I've heard...' so we can weigh the validity of your statements...

: KD6ELA / GROL / Pvt. Pilot

I have always wondered how do they enforce using airplanes at night.
(i.e. can't identify cars by colors, makes, etc). Also, the
markings (for reference from the aircraft) are not obvious in CA,
as they are in some other states (you'd see a big white circle in
the middle of the lane, or a sihoutte (sp?) of a plane right
in the middle of the lane, which I think serves as a reminder.)

>>frequencies. Did you get anyone to help you?
PS>I also need these frequencies. Anyone who has been to time trials and
>has some freqs, please post. Paul Schmidt

Here's the latest I've got.
The Penske teams are scrambling, but they are using speech inversion. A very simple descrambler can be built to take care of that. That type of scrambling makes the hi (audio) frequencies low and the lo audio frequencies high. I've got a schematic for one if anybody needs it. John. E-mail me at: john.avery@uchoice.com and I'll e-mail you the schematic and parts list.

Here's the list for the '95 Indy500:

Paul Tracy 461.2875
Brian Herta 464.0375 469.8875
Robbie Gordon 461.0625 463.2375
Michael Andretti 461.7125
Feliceo Salidoar 461.3875 462.8375
Bobby Rayhall 461.3125 468.2625 469.2625
Andrian Fernandez 461.8625
Rouhul Bossell 462.8125 463.6375 464.7875
Jimmy Vassar 461.1125 467.0375
Eddie Cheaver 461.8375
Joe Mashusta 468.8125 469.2125
Emerson Fitapaldi 462.1375 464.1625
Danny Sullivan 463.4625 468.4625

IB> * Silver Xpress V4.00 SW12853

i'm not talking simply about them planning the thing over the radio.
i listen to plenty of drug busts around here. conditions, people and
places can change quickly during a sting or bust. this information is
often sent out over the air to let the other officers involved know
what's going on. it's one thing to plan the incident out, it's entirely
another to attempt to go into action and expect everything to work as
planned. players don't show up, people get suspicious, civilians get in
the way, criminals run... how can you NOT use the radio for all that.
MDT's? sure, but they're slow as hell a lot of times. by the time you
get your message sent to the other officers that suspect X is fleeing
down the alley, the computer is so slow that the suspect is now 5 blocks
away.

remember, most criminals are inherently stupid, especially the lower
levels of the drug dealing world...but all it takes is one of them with
a scanner and half a brain, and everything could fall apart in seconds.

i love listening, but there's just some things that need to be
encrypted.

>recall us giving police officers confiscation powers, except for contraband
>material such as drugs and stolen items in your possession.

I looked this up the other day - straight out of the prosecutor's law book (I have jury duty). Here it is:

2C:33-21 INTERCEPTION OF EMERGENCY COMMUNICATIONS FOR UNLAWFUL PURPOSES
Any person who intercepts any message or transmission made on or over any police, fire or emergency medical communications system, or any person who is the recipient of information so intercepted, and who uses the information obtained thereby to facilitate the commission of or the attempt to commit a crime or a violation of any law of this State, or uses the same in a manner which interferes with the discharge of police operations, shall be guilty of a crime of the fourth degree.

2C:33-22 POSSESSION OF RADIO TO INTERCEPT EMERGENCY COMMUNICATIONS WHILE COMMITTING OR ATTEMPTING TO COMMIT A CRIME
Any person who, while in the course of committing or attempting to commit a crime, including the immediate flight therefrom, possesses or controls a radio capable of receiving any message or transmission made on or over any police, fire or emergency medical communications system, shall by guilty of a crime of the fourth degree.

2C:33-23 EXCEPTION; RADAR DEVICES NOT INCLUDED.
For the purposes of P.L. [1991], c. [432] (C. [2C:33-21 through 2C:33-22]), the term "police, fire or emergency medical communications system" shall not include radar devices used to monitor vehicular speed.

These were adopted as L. 1991, c. 432 effective January 18, 1992.

: these up at. I've heard anywhere from 1000+ and also around 800-851? Please
: Help.

Well if you are talking within a scanner itself its to do with the way the signals are passed through ocillation stages from different parts of the recieving circuits. Well, something like that.. I am no expert, but i know a little! :) <so pls dont flame me to death>

On an ar8000 scanner for example we have found that a near perfect image of 'something' heard in the 800mhz range is a perfect 550.9 Mhz ABOVE the freq you would like to hear.. For example, if you could think of anything to listen too between say 820-890 mhz at any given step rate then the freqs you would expect to hear there would also lie 550.9Mhz up in the 1400 range.

Get a calc out, work it out from the above info and set a search range with the appropriate offset and you can listen away...

This freq can be calculated from the crystals inside the set from what i know, but trial and error with 2 ar8000's locally here aswell as people from all over have proven our theory to be correct...

The true legal status of monitoring cordless phones in the United States is:
illegal. The ECPA has been revised to remove the exemption for monitoring
cordless phones. I don't have the Public Law number handy, but it's been
done. Bummer.

2875. UNRAVELLING THE PRO-46 MOD

Newsgroup: rec.radio.scanner
Date: 1995-05-20 00:00:00 UTC
From: an187330@anon.penet.fi
Message-ID: <205303Z20051995@anon.penet.fi>
Source record: 256290

I bought the pro46 on Dec 30/93
the serial no. is 35003188
followed by 6A3 underneath

On the inside backcover it is written MI-25740G1-HP UB 222

Is the unit modifiable ?

I was following a mod taken from May 1993 Monitoring Times

I desoldered 2 of the 4 corners of the shield covering the
Uniden 1489 microprocessor and I saw a BLUE chip jumper to the left of the
microprocessor, labelled
600J and underneath
an encircled M followed by a D (or O?)

I cut out one of the leads of that jumper but after reassembly
I had no power at all (blank display and mute speaker)
So after resoldering the cut lead the gadget works fine as before

(I used a 15 watt soldering iron)

There is also a device labelled C B
2 Y

to the right of the uP but i do not think it is a a chip jumper because
it has 3 leads (it is black coloured)

I would greatly appreciate an explanation of the circuit in the mod
because it is totally unclear to me after pondering over it for a few
weeks: The first thing that matters is to locate those 2 jumpers. Also

what it that IC in the diagram ?

Yours truly
Nosy

[detailed feature summary omitted]

I've been testing the PRO-26 and BC-3000 side-by-side and they
are both good scanners. But in addition to different feature
sets, there are performance differences, especially in image
rejection and audio quality.

Watch for a comparison article in a future issue of Monitoring Times.

>I'm looking for any VHF fire/EMS frequencies that are still in use within
>about a 15 mile radio of San Diego, CA. I know that SDFD is trunked now,
>but I recall that they used to simulcast dispatches on VHF. I won't have
>any gear other than VHF, so anything outside of 137-173 MHz will be
>off-limits to me.

What area of San Diego?? Anyways... Here are a few:

San Diego 154.3100
South Bay 154.4150
North County 154.2350
Del Mar/Carlsbad 154.3850
Oceanside 159.1650
Camp Pendelton 138.6000
Escondido 154.3250
Inland Fire (Volunteer) 154.1750
CDF Dispatch 151.1900
Cleveland NF 168.7500

San Diego and Escondido are both on their own trunked systems, but still
simulcast dispatch on the VHF freqs. San Diego also simulcasts PD F4
(Downtown area) on 159.0450.

There's also a whole slew of military FD freqs, but I don't have them
handy at the moment...

: In article <jwaydaD8u4IH.50u@netcom.com>, jwayda@netcom.com says...
: >
: >I will give you $100.00 and you pay shipping. (For an R1)
: >Jim
: >jwayda@netcom.com
: >
: >

: I HAVE owned an R1.

: I really am tired of R1 bashers. How many have actually owned or ever
: used an R1? Like ALL radios, it has its detractors. The main detractor
: in the R1 was the poor selectivity. This is not a problem for some since
: they do not live in high RF areas with stronger signals that tend to
: bleed over. It is (by far) the most compact and well-built handheld
: scanner ever made. I reluctantly parted with mine because I needed
: the money, but I'll probably buy another some day. From now on, if you
: feel a need to bash the R1 (or any radio) please preceed your OPINION
: with your EXPERIENCE. Or at least say 'I've heard...' so we can weigh
: the validity of your statements...

: Tom, N0YGT

Tests in the Lab have proved the ICOM R 1 very bad but I didnt think that
was what people are attacking. Price is what matters here,GROVE last time
I looked was selling them for 400 new and certainly the accessories do
not add up to 900 total,maybe with Sugg retail list price??

I looked into the ICOM R1 as a potential scanner but I passed it up .. why??
Because I have heard bad things about it . Dont get me wrong I have ICOM
stuff but I am glad I waited around and see what would come up next, eg
AR8000 or a YUPI 7100.

I also have had the opportunity to try an ICOM R1 at a local Ham shop..
it doesnt cut it since I live in a City with plenty of RF.One remark from
a user was it was good as toy.... I would have bought one since I have
extra ICOM batt packs and I can interchange stuff but SELECTIVITY was
poor , not enough memory channels and a Slooooooooow scan rate kepy my
hands off one.

Source record: 256296

I have the Pro-46 Radio Shack scanner and was wondering if it needs to be recalibrated. There seems to be alot of background static even on strong frequencies that I don't recall being there before. I did drop the unit once but it was not damaged in other obvious way that I no of. How difficult is recalibrating a scanner and what equipment might I need.

Thanks
Rich Banks

2886. naber or fcc freq data base???

Newsgroup: rec.radio.scanner
Date: 1995-05-20 00:00:00 UTC
From: dominick@earth.planet.net
Message-ID: <3pjdfv$hso@jupiter.planet.net>
Source record: 256301

Does anyone know of a net source of the fcc frequency database. I know
scanner master has a cd rom d-base out, but I cant afford it. I have several business
radios that I want to license but need to find the best freq to set them up on. I said
all that to say this...If you have the scanner master dat on a disk (not the cdrom)
can you send it to me via e-mail? It would be greatly appreciated.
If it is a bin file you can uue it. Please do not attach. I have I box ... it does
not work well with attachments.

I have a one year old Pro-46 Cell-modified scanner for sale. With Ni-Cad batteries and charger/adapter. This scanner is in excellent shape, and has never been dropped or gotten wet. Batteries have not been 'abused'.

I am asking $150CDN/$110US OBO, you pay shipping.

Contact me at efehr@freenet.calgary.ab.ca, or phone at (403)228-0946.

Eric Fehr, CNT Grad NAIT/94

The civilian GPSs are "lied" to all the time.... I work with forestery
companys who do mapping. They use two GPSs to do real time mapping.
There is one GPS at a fixed known point that takes readings at the same
interval as the person who is walking around with another GPS creating
the boundries of a map. Computers are at both GPSs recording the results.
The satellite "lies' the same amount each time so the GPS at the fixed
location records each "lie". The computer takes to differences and
applies them to the moblie GPS to get the "real" reading. Only the
military gets the real readings.

It would be kinda thieving to send you data that was paid for, but NABER will find the best frequency for you. Just tell them what you are looking for when you apply. They will choose a frequency for you. Or if you think you have one, call them on the 800 number and they will search their records for that frequency and advise you as to whether it is an apparent problem or not.

Check/replace C213, a 100 microfarad 16 volt electrolytic capacitor,
located on the linear board. It is connected to pin 1 of IC7,
in series with the output of the audio amplifier chip.

>I just have a terrible scanner?

The PRO-2003 wasn't particularly popular and does not cover 800 MHz.
It scans and searches very slowly by today's standards. You can order
an owner's manual from your local Radio Shack store.

From the FAQ:

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[...]

PRO2003: Radio Shack's 1986 top of line. 50 channels + 10
FM commercial broadcast band channels. Includes aircraft.
Good frequency coverage and functionality, but at a high
price. Poor human engineering: difficult to read keyboard
makes the PRO2003 hard to operate unless in a well lit
room. Keyboard label coloring improved on newer units.
Rather slow scan rate and high price. Although there are
provisions for 12VDC operation, the cabinet shape and lack
of mounting bracket makes mobile operation impractical.
Scan rate only 8 channels/sec vs. 15/sec in Regency and
Bearcat. Causes RFI: Plastic case permits scanner to
radiate signals into nearby receivers.

Gabe,

Radio Shack *DOES* sell GMRS radios (151/451 MHz) radios, and they are
GREAT for use because they have a server mile range on them. They are
$130 each I think, not exactly sure, but ask them for a "GMRS" radio on
the "Blue-Dot", "Red-Dot" or "Yellow Star" frequency; the "Green-Dot"
is 151.6250 MHz and is a well known frequency, so you should steer away
from Green-Dot radios.

I live on the Big Island, and I found that just by stopping in a
radio shack store I could get a 4 page xerox of the scanner fkcs
used on this island. They charged me 2 bucks which is a lot for
4 pages of xerox, but it was better than trying to find things
myself! Try the yellow pages when you land in Maui, and swing by
the Radio Shack.

The best source for this info is a book called Scan Fan. It is available at your local Ham Radio Outlet, or you could try some other ham store in the Northridge area.

If you are on the road and want to listen to whoever is close by, scan 42.0-42.9995 MHz.

Good Luck,

Doug

That doesn't mean every Joe, Tom, Dick, and Harry won't do it anyway.
People will break FCC laws all they want because they have to fear of
getting caught. Its like using a linear wattage power output amplifier
on 11 meters (CB); every yokel and their inbred sister will use those
damn linears and won't care or even know they're illegal because the
FCC never really cracks down. Until they crack down, and hard, there
will be NO FEAR of FCC rules. Being an FCC-law-abiding Amateur
Operator, I frown upon those of you who use your scanner to listen to
innocent people's telephone conversations.

Hmmph.

2910. source for "ground motion detector" sets--wanted

Newsgroup: rec.radio.scanner
Date: 1995-05-21 00:00:00 UTC
From: edg@northcoast.com
Message-ID: <edg.1.00201726@northcoast.com>
Source record: 256181

Does anyone know of a source for a war surplus, ground motion "Detector Set", Model TRC-3A, made by Dorsett Electronics. They come in sets of 4, and are used to detect foot or vehicle traffic. When motion is detected, they send a signal on 127.4 mhz, and a beep (1 to 4), identifing which unit was activated. I've tried a couple of electronic war surplus dealers, but with no luck. A local store sells them, but for $350/per set, which seems is rather high.

Any possible sources would be appreciated, as well of any electronic war surplus dealers that can be recommended in general.

Thanks in advance.

What you are looking for is a diode about the size of an "0". I recall
that you have to get some boards apart by desoldering a ground strip.
Find the board with the right series numbers i.e. one board everything is
d303, r305, c311 etc, another board is 200 numbering and the last is 100
series components. Find the right board and look for you diode there.

.

If the antenna is a dish or a yagi with short
(less than 6" elements) it is probably a data
link for inventory. If it is a yagi the size
of those used for the FM broadcast band, it
is probably for "Elevator Music".

I had to make a tough choice this year- stay home and watch the Indy 500 or take a long weekend to take a much needed vacation in the hills of southeastern Ohio. Unfortunately, I have reservations at a campground in the Hocking Hills area next week...

So I was wondering if the Indy 500 will be simulcast on any repeaters available in that area. I have a pro-43 scanner, so only the (2 meter and 4 meter?) bands receivable to that radio will work for me.

Does anyone know if I'll be able to hear the race live on my scanner?

Thank you very much!

Some time ago I saw a "letter to the editor" which looked awfully
familiar. Next time I was in the basement, I looked through my old
magazines and found the copy of "S9 Hobby Radio" (a defunct CB-related
Kneitel vehicle) and found the same letter, dated years earlier. What's
the matter, Tom, not enough "real" letters coming in?

What finally did it for me was the Gene Hughes (publisher of Police Call)
debacle. Tomcat wrote a piece on him, and in the next issue, pulbished a
"letter to the editor" thanking him for the editorial and voicing support.

Trouble is, there is no way for a real reader to receive a published issue
and write a letter in time for publication in the next issue, since the
lead time is way too long. Tomcat must think we're all fools for even
considering such a stupid ruse. At that point I abandoned Tomcat and A
Nice Girl In A Barn in favor of Monitoring Times.

MT has a shorter lead time, far more pertinent articles, and is more
useful to me (in spite of carriyng the baggage of being published by a
dealer).

V> down the alley, the computer is so slow that the suspect is now 5 blocks
V> away.

For tactical usage, as you are describing, fine, I see that. But I got the
impression that people were talking about the PLANNING of such busts.
Here in Phoenix, I've witnessed two drug house busts. In each case, the
planning was such that there were no escapes, no suspects fleeing 5 blocks
down an alley,because the exits were covered. Planning. Not over a radio.

V> remember, most criminals are inherently stupid, especially the lower

Not with proper prior planning.

V> i love listening, but there's just some things that need to be
V> encrypted.

Some things, maybe. Problem is, our government (police are an arm of the
government) tends to go overboard. We do not need secret police. We already
have police doing no-knock search warrant service wearing black hoods, and
(literaly) jackboots. They are asking for more authority to spy on anyone
they can work up a case against (which is anyone, period). Those of us with
scanners are prime targets for this kind of spying, as we must have the
scanners to spy on the government, right?

Recalibrating a scanner isn't difficult at all. It seems that you may have already done so! ;-)
Actually, it's not difficult at all. The Service Manual (Tandy National Parts - 800-843-7422) is a necessity, as it gives the procedure and tools necessary.
The problem is, the tools needed are expensive (especially of you don't already have them).

JH> please post. Thanks.

The volume should be dependent on the scanner, not the speaker itself.
What I did for my use where background noise is too high for even the lapel
speaker was to use a set of "bud type" in the ear headphones. I only use
one, and simply tape the other one to the cord, so it doesn't flop around.
Works great for me.

Any time you want to open a scanner to do internal work, you need the service manual. Tandy National Parts (800-843-7422) will sell you one. The SM will show you where the part you want to play with is, in no uncertain terms.

: 8 bit DES? Around here DES is 64 bits. In the past, the marketing
: literature equated the number of key combinations to something about
: "grains of sand on all the beaches in the world."

I've never heard of anyone using DES to encrypt cordless phone
calls. I doubt this person was mentioning it either, I don't understand
where DES came into this. I hope you are aware that DES is not the ONLY
encryption method. For one thing, while DES is 64-bit, 8 of them are
parity, and as such it is really only 56-bits. Besides, what he was
talking about was 16-bit, not 8.

On the other hand, not all encryption systems actually would
require you to listen to the results to decrypt them, therefore it might
be possible to go through the combinations much quicker. Another thing I
should point out. I'm not familiar with any phones with that sort of
encryption. The cheap (well, the encryption is, the phone isn't)
Motorola SecureClear phones are nothing but primitive frequency
inversion. The slightly more advanced phones (900MHz) use frequency
hopping, as an attempt to make it impossible to eavesdrop, although it
doesn't actually encrypt. The even more advanced phones digitize the
stream and use direct sequence spread spectrum. I am not sure if these
phones encrypt or not. The direct sequencing is a much more difficult to
decode system, as it is essentially a one time pad, although the pad may
not neccessarily be secure. I am not sure if they encrypt the data
stream before encoding it.

The 16-bit encryption I am familiar with is a security code to
prevent people from accessing your phone. Without it, anyone upon
hearing a dial tone could make phone calls off of your cordless. This
system does nothing to attempt to obfiscate the actually voice transactions.

Pc> codes? Thanks.

The thing about 10 codes is that they vary from area to area. For example, a 10-99 in my town is a Wanted Subject while in another area, it is an acknowledge of the call with a 2 man unit.

Police Call has been helpful in my area by publishing the 10 codes. You might want to try the guide for your area to see if it is helpful.

Most of this type of programming is transmitted over the subcarrier of local FM radio stations. There is also some paging and special subscription services which use this distribution format (i.e. Physicians radio network...). Yes you need a subcarrier receiver.

If you have an earphone with removable earpieces (often designed this way
for hygeine and size considerations) most audiologists & hearing aid shops
will custome mold an earpiece. Commercially TELEX has a custom earmold
kit in their EAR MIKE catlog.

I had no luck with the Interceptor I purchased, and I returned it. I live in a city and there are lots of RF transmitters. The thing would pick up something interesting for a few seconds, then go on to another transmission. It wouldn't record the frequencies, so I had no idea what I was listening to. I called the manufacturer & they told me a new product would be out within a year or so which would record the frequency for you to enter into your scanner at a later time. I would stay away from the Interceptor unless you live in a remote area.

John

Ten codes are standardized by APCO up to 10-39. Any ten codes over 39 can be
whatever the service wants them to be. In MOST services, all ten codes up to
10-39 will be the same.

2946. Pro-39 800 Mhz chip removal

Newsgroup: rec.radio.scanner
Date: 1995-05-21 00:00:00 UTC
From: avlachos@bu.edu
Message-ID: <3pme8s$6kk@news.bu.edu>
Source record: 256320

HI. I own a Radio Shack Pro-39 and want to remove
the D6 chip (I'm pretty sure that's the correct one).
Can someone PLEASE send me information on how to go
about doing this? I'm not really sure where the chip
is. And knowing me, I'll probably break the damn thing
trying to figure it out. Who knows, I probably have the
wrong chip, but I want to be able to pick up the 800 Mhz
frequencies.

Any help is much appreciated.

Thanks,
Alex

I first had a BC100XLT, and recently just purchased the BC200XLT.

There is no question that for the money it is the radio to get.
I recommend purchasing a Battery from a company in Illinois called
Metro West. You can buy a drop in charger, and get 11 to 14 hours
of battery life.

I would buy a 3000 XLT if Metro-West made a battery for it. But, they
don't, so I won't...

I couldn't tell you how or if they enforce speed by air at night.

The markings on the CHP aircraft used in northern California are distinguishing. They have bright orange marks on the vertical stab and wingtips as well as "Highway Patrol" on the wings. They generally operate pretty low over the freeway compared to most other aircraft. In addition they almost always use modulating landing/recognition lights that alternate between the wingtips and nose of the plane. I believe they are usually Cessna 170s or 180s - they don't normally use helicopters for speed enforcement because they are too expensive to operate.

Air operations are also normally done with several patrol vehicles on the ground on a certain section of highway. So even if you miss the plane you will usually see a more than normal amount of cars stopped in a few mile stretch and perhaps a row of cop cars lined up on the on ramps waiting for targets. It's amazing that so many people get caught when they make air work so obvious. But most people look about a far down the road as their hood ornament when they are driving.

Yeah, for the "low" price of $35. Shhesh. What a complete rip. If anyone finds any updates, post em here and save a lot of people some cash. I could see $5 maybe but $35 is highway robbery. For that much I could get a CD-ROM freq list (of course I don't have a CD player).

I think I posted this before, but if the radio's battery goes dead, and power isn't returned within 30 seconds(about) the secure code will be lost, but I think it may return to a default value??? As for the person knowing if the code was gone, if their party was talking in the securenet mode, the person who lost the code wouldn't be able to understand the other party's traffic, and would probobly be smart enough to tell them so.

You can use a generic connector. There is no special circuitry in the Uniden cord. The battery pack has a built in current limiter.

I have to admit, I was quite rude in my last post. I was also referring
to cellular scanning, not just cordless (which is not the real
problem...)

I apologize for any rudeness my post protrayed. I was miffed about this
stupid, ongoing thread of smut about the phone scanning laws. They do
need to crack down more, yes, and there also needs to be more about it in
the medai.. warning people that what they say on their phone could be
broadcast to several listeners.. and those listeners usually aren't the
kind who you want to hear what you say... for instance information on
planning a trip.. if the right person hears this, he's going to take
advantage of it. The well-advised citizen should know what and what not
to say on his/her phone. ;)

I have the BC200XLT. A great radio. If you want to monitor 800 MHz, though, the '200 is almost deaf. Watch out for a loose BNC if you make a habit of using an external antennna. Battery life reports vary greatly - some folks claim 5 hours, some 10 - I get about 8 consistently. If you're real nice, I bet Bob Parnass will post his review :-)

I believe the BC220XLT has replaced the BC200XLT. If you're looking for a used one, the Regency R4030 and the BC205XLT are identical models.

I just bought a BC3000XLT and is is far superior in every way, including 800 MHz reception. Look for Bob Parnass' review in the April _Monitoring Times_.

ab@ntmtv.com (Adrian Brandt) writes:

>There are *some* differences, but they are pretty minor stuff.

I'll add my comments (as a happy BC3000XLT owner).

>On the 3000XLT, you just type a frequency and hit enter--just like
>on all Bearcats before it.

Well, not quite. You have to hit the decimal key unlike prior radios
where this was only necessary for VHF-lo.

>The Pro 26 only has one priority channel, while the 3000XLT has 10.

The first channel in each of the first ten banks is priority by default.
The priority channel can be changed to any channel in the bank however -
very handy, IMHO.

>they both have a user-selectable keyboard beep function (I didn't
>verify if the 3000XLT did, but I know the Pro 26 does.)

Yup. Power-on with the LHT button pushed to toggle the modes.

>The 3000XLT has this "gee-whiz" feature (which I'm sure *somebody*
>might find useful) called count. I'm not sure of all the ins and
>outs of how it works, but it is used to keep count of how often the
>radio stopped on a certain channel or frequency.

I have a BC3000XLT and this is the first I've heard of this function. Not
surprising since the manual omits a whole BUNCH of features (like all the
power-on toggles). Anyone care to describe how to access this function?
I would welcome the function - I use it a lot on my BC300.

>Other than the two legally-mandated cellular gaps in the 800 MHz range,
>the Pro 26 offers continuous coverage from 25 MHz to 1.3 GHz.

The BC3000XLT also skips 550-760 MHz.

>of the unit! I prefer a side plug. Lastly, I am used to owning
>Radio Shack/Realistic scanners and I suppose I have a bit of brand
>loyalty going...

This is my fifth Bearcat (BC100, BC200XLT, BC300, BC850XLT, BC3000XLT)
and I suppose I have a bit of brand loyalty going... :-)

>Both scanners are seem like they're excellent though. I can't
>figure out why RS publishes stuff like sensitivity specs in the
>Pro 26 manual and Bearcat does not in the BC3000XLT's manual...

Because it appears that Uniden was in a big hurry to get the manual out
the door and missed about 10 pages?

2963. BC3000XLT Extended Warranty

Newsgroup: rec.radio.scanner
Date: 1995-05-22 00:00:00 UTC
From: RSC@sruvm.sru.edu
Message-ID: <173A612071S86.RSC@sruvm.sru.edu>
Source record: 256087

Hi All !

As the proud new owner of a BC300XLT, I was wondering what thoughts
the group had about the "extended warranty" being offered by EEB.

The warranty offers the following:

- 5 yr. coverage for $49.95
- coverage begins where the factory warranty ends (1 yr)
- all parts & labor

The warranty _excludes_ the following:

- normal PM & alignments
- tubes & batteries
- freight & insurance
- factory mods & upgrades
- accessories

Your comments and insight will be appreciated.
Thanks - Ron

Eddy J. Gurney (eddyg@vcd.hp.com) wrote:
: I know there are plenty of ICs manufactured to do DTMF decoding. But
: I haven't seen any info on an IC that decodes PL tones and then outputs
: the result. (With over 32 PL tones, you'd need 6 outputs to decode up
: to 64 tones.) Does anybody know of such an IC or anything similar to
: decode some of the PL-type systems currently in use today?

Hi Eddy!

They're all over the place. Pick up a copy of Monitoring Times, Popular Comm, Nuts & Volts, CQ, 73, QST, Radio Electronics etc.

Cheers!

Andy

The P10 is a crystal controlled radio which is discontinued. Look for the Synthesized version which is called a SP10. Welcome to the bottom of the Motorola radio product line.

2968. Re: anyone familiar with Motorola VISAR ?

Newsgroup: rec.radio.scanner
Date: 1995-05-22 00:00:00 UTC
From: saylboat@aol.com
Message-ID: <3prjiv$ig2@newsbf02.news.aol.com>
Source record: 256092

Yes....VISAR has been out in the commercial market for about one year. the radio is programmable with Motorola RSS (Radio Service Software) which is licensed to dealers and seriously protected by Motorola. The radio is capable of sixteen conventional channels or four systems with four talkgroups on trunking (Privacy Plus). There is no direct frequency entry on the keypad which is a feature not commonly found or desired on Business band radios (keypads for DTMF encode are a option only available on the conventional and not trunked models at this time. Motorola has just announced, but are not taking orders for a radio in the MT1000 and HT2000 line which will be keypad programmable with a programming "acccessory" plug. At the recent Las Vegas dealer meeting it was stated that Motorola is working on getting a full(er) featured VISAR model for trunking out soon). The radio is cabable of CTCSS (PL), DPL and MDC 1200 formats. Any more questions let me know.

2973. Modification of the Sportcat Scanner????

Newsgroup: rec.radio.scanner
Date: 1995-05-22 00:00:00 UTC
From: student@chemeng.chmt.wits.ac.za
Message-ID: <student.14.2FC0D575@chemeng.chmt.wits.ac.za>
Source record: 256097

How would one go about modifying (openning, programming, altering,etc...) of
a Uniden Sportcat Twin Turbo Bearcat handheld scanner, to receive:
54-76MHz range?

Any help will be greatly appriciated.

Please note that my E-mail is not working now, so please leave a reply on
the newsgroup notice board.

Thanks

P.D.

2974. Bearcat Handheld Scanners

Newsgroup: rec.radio.scanner
Date: 1995-05-22 00:00:00 UTC
From: Vaughan.Huska@odxabbs.tor250.org
Message-ID: <a66_9505250504@tor250.org>
Source record: 256098

Hello.

-> Anyone have any experience with Bearcat handheld scanners? I'm
-> interested in hearing of anyone's experience (good or bad).
-> Specifically I'm looking at maybe purchasing a BC 200 xlt or, one of
-> similiar design.

I've owned a Bearcat 2500 XLT, 400 channel scanner since January
`94 and have found one major flaw with it and most of the Uniden
product, which is, the damn nicad pack.

I used to own a PRO-34 a couple of years ago and miss the ease
of loading the scanner with 6 re-chargable double A batteries into it's
battery holder. The Bearcat on the other hand is ridiculous with
regards to it's nicad pack and if I had known this before I bought it, I
wouldn't have bought it.

The nicad pack on a Bearcat is essentially part of the scanner.
Once the nicad pack dies (which happened to me after only 14 months of
use), you're literally forced to purchase another at 43 dollars U.S. or
70 dollars CDN.

Mind you, I like the performance and the range of the 2500, but
the nicad pack on this scanner has to be scrapped and Uniden should
definately give you the option of being able to load akaline or
rechargable batteries into a battery compartment with all it's scanners.

Anyone from Uniden reading this? I laugh at the fact that
Uniden calls the nicad pack, "disposable". Sure. I wouldn't consider
something that has to be replaced maybe every couple of years, at 70
dollars CDN, "disposable".

-> I have a couple of RS scanners and I'm looking for one more that is
-> somewhat reasonable in price.

Go for the PRO-43. Most people rave about them. I believe that
they are about 350 dollars.

Cheers,

Vaughan

In article <jwaydaD8yvB8.30G@netcom.com>, Jim Wayda <jwayda@netcom.com> wrote:
>Does the BC9000 receive cellular images like the BC3000?

Yes -- in the top end of the military air band and above 1005 MHz.

> Also, how does the BC9000 compare to the rs pro-2006?

Both are top notch, but that would take an entire article to
explain (see the BC9000XLT review in March 1995 Monitoring Times
magazine). I found the PRO-2006 to be more bulletproof RF-wise,
but the BC9000XLT isn't far behind. The 9000 does interfere with itself
slightly unless connected to an outdoor antenna.

Feature-wise, it's no contest -- the BC9000XLT beats the PRO-2006
handsomely (except that the PRO-2006 has 10 search banks vs. a single
search bank for the 9000.) You can, of course, spend the money
to add a computer and an Opto board to the PRO-2006, in which case,
the simple PRO-2006 firmware features are replaced with a much
richer and expandable set.

Since the review BC9000XLT was a loaner, I ordered a personal unit to
add to the PRO-2004/5/6 collection :-)

> Does anyone know if Bob Parnass
>has done a review of the BC9000?
>Jim >jwayda@netcom.com

Yes. See above reference. Since writing that review, I have received
positive reports from new BC9000XLT owners. I hope more owners will
share their comments and comparisons by posting.

--Sir Arthur Sullivan
: Gabe,

: Radio Shack *DOES* sell GMRS radios (151/451 MHz) radios, and they are
: GREAT for use because they have a server mile range on them. They are
: $130 each I think, not exactly sure, but ask them for a "GMRS" radio on
: the "Blue-Dot", "Red-Dot" or "Yellow Star" frequency; the "Green-Dot"
: is 151.6250 MHz and is a well known frequency, so you should steer away
: from Green-Dot radios.

Whoa there.... GMRS is a UHF service, 462 MHz, and is NOT for commercial
use anymore. This is NOT a GMRS application, although Radio Shack does
sell a GMRS radio. They do sell a business band radio on 151.625 MHZ, and
you can find Motorola P10s (and SP10s) fairly cheaply from a large number
of mail order stores on 154.57 and 154.6. All these must be licensed!
Check with a local commercial radio store, they may be able to help and
get something cheaply.

Regards,

2980. Medevac & Trunked Radio ?

Newsgroup: rec.radio.scanner
Date: 1995-05-22 00:00:00 UTC
From: <>
Message-ID: <8A9D242.003F000C81.uuout@hobbs.com>
Source record: 256104

I have a question regarding Medvac Helocopters and Trunked radio systems. Medevac Services fly into many different jurisdictions, each jurisdiction has it's own radio system, this is no problem for the Medevac Service that has frequency agile radio sytem on board covering all VHF low and hi bands plus all UHF frequencies. These also have adjustable CTCSS and DPL encodes, allowing the service to communicate with any ground unit. How do they handle a situation when the ground units are trunked ?? Thanks in advance for any and all comments. -Dan-

2985. 900MHz phone freqs & Unid

Newsgroup: rec.radio.scanner
Date: 1995-05-22 00:00:00 UTC
From: <>
Message-ID: <8A9D15A.003F000C84.uuout@hobbs.com>
Source record: 256109

What area of the 900MHz band do most of the new phones operate?
I am told that a lot of the 900MHz phones are still using analog signals and simple inversion for "scrambling".

Our Uniden EXP 9200 is digital spread spectrum and obviously not as simple to decode. BTW, it was rated number one by Consumer Electronics along with its 9100 counter-part. This is why we purchased the unit and because it documented a spread spectrum digital signal. Most of the others we looked at recently, last week, made no mention of the type of signal/mode. Frequency range specified in specs: 903.087-925.6131MHz. Tx power at base = 100mW, Tx power at handset = 100mW per a Uniden representative (Does this sound right?). Anectdotally, I can report the range is at least 3-5 times that of our Panasonic KX-T390H1, 49MHz -- and NO static buzz! Uniden has a service manual with alignment specs and power out adjustments....Panasonic could "think of no reason to provide one to consumers" when I called.

We have only had the Uniden phone for about 8 days....I think I will go ahead and try out some others. Any user experience out there?

Source record: 256111

With regards to the 2006... If one utilizes the OptoScan 456 interface and ScanCat Gold, Probe, or ScanStar PRO (I THINK Scanstar does it, not 100% sure) you should be able to decode and then set the CTCSS tone to desired parameters. I have all three software packages and prefer each for different reasons. There are also individual CTCSS and DTMF decoders by OptoElectronics, etc. out there...One can build a fairly simple CTCSS squelch unit for your speaker, but these tend to be limited in operations...scanner stops anyway, not easily changed, etc....

Hope this helps! Check out Nuts and Volts, Popular Communications, other mags - these tend to advertised in the back...

Is it OK to use a non-Uniden automobile power cord
with the BC3000? Does the Uniden version, UA502,
do anything besides deliver power directly/unmodified
from the car battery to the scanner battery?

The UA502 is $11.25 straight / $12.19 coiled plus
$4.50 shipping but I've seen generic ones for $3.99.

Is there a Radio Shack or other generic car power cord
that I can safely use with the BC3000?

Thanks,
Richard

Yup. Reminds me a lot of the local citizens in my neighborhood.
They are doing their best to clean up the neighborhood: no outdoor
antennas of any nature are allowed. That's what the majority wants,
and that's exactly what they got.

Seems to me there are two kinds of people: those who think everything
not specifically permitted is forbidden, and those who think everything
not specifically forbidden is permitted.

I have no time for folks who fall into the first group.

To put it bluntly: STOP TELLING ME WHAT I AM ALLOWED TO READ.

Thank you for your consideration.

Also thank you for your consideration in removing at least 4 or 5
of the 6 or 7 groups this has been posted to. "Spam by any other
name tastes just as bad."

Well, guess what I just found in the Chicago area.
A signal on 322 kHz, transmitting some kind of low-rate FSK
data with a rather low frequency shift. So low, in fact,
that without the BFO turned on, it sounds like an unmodulated
carrier, not the "galloping hoofs" of an SW RTTY signal.

This is a new station, not an existing aircraft beacon. It has no
A2/MCW Morse ID modulation as those do.

Baud rate seems to be around 100 or maybe a tad more.
Might this be a GPS differential broadcaster?

PS: Haven't DF'ed it yet -- could use my classic Raytheon DF
portable to get a bearing from Wheaton, IL.

well, i'm not familiar with the exact details -- it is no doubt someone's
State Secret -- but this doesn't resemble my experience. if you watch the
a fixed receiver, the display shows a very slowly moving position. typically
under a metre per second.

this kind of "low frequency" noise allows fairly accurate course/speed
estimates. if the noise was "high frequency" it would be almost impossible
to tell if one was moving or not via GPS alone, and indeed, any dGPS
would become quite a bit more difficult -- certainly for the current US/Canada
Coast Guard system, which, i believe, transmits corrections at something
like 50bps.

(paranoia mode on) and given the claimed purpose of SA, using low-frequency
noise makes some sense too, since it pushes the integration time up for
"precise" positions. if we want, say, a position to 10m, the present system
requires almost 1000 observations (20 minutes or so for my receiver), or
equivalently, we ignore about 9 of every 10 observations. reason: successive
positions are highly correlated -- ie, not "independent".

so paradoxically as it seems, the more noise in the signal, the more useful
the system may become in a tactical environment. (paranoia mode off)

Don't think that's the way it works. At any one location the reading stays pretty constant, and if the error were really like noise it would seem like you could just average a lot of readings to get a more accurate fix. However, like some of the others on this thread, I don't claim to know that much about the system. In any case, as has been stated before, the reason for using LF is more likely propagation related, especially around inland waters where accuracy is more critical anyway.

Have a nice day.....Jay

Actually, it's interrupt *FoldBack*, but you're real close. It's
used exactly like you described.

Foldback is usually one of many auxiliary mix busses on an audio
console, and it can contain more (or less) audio sources than the
full program that ends up on the air.

Elbert,

Virtually all RS scanners are made by Uniden or GRE. The Pro 2026 you
mentioned is made by Uniden (Like BC-760XLT) as is the New pro-26
handheld (Like BC3000XLT) and Pro-2036 base unit (Like BC-890XLT)
among many others.

The new Pro-62 and Pro-60 handhelds are made by GRE as is the Pro 2035
and 2039 Base models.

Frank.

RU>I have a question regarding Medvac Helocopters and Trunked radio systems.
RU>Medevac Services fly into many different jurisdictions, each jurisdiction
RU>has it's own radio system, this is no problem for the Medevac Service that
RU>has frequency agile radio sytem on board covering all VHF low and hi bands
RU>plus all UHF frequencies. These also have adjustable CTCSS and DPL encodes,
RU>allowing the service to communicate with any ground unit. How do they
RU>handle a situation when the ground units are trunked ?? Thanks in advance
RU>for any and all comments. -Dan-

That was one of the many concerns with all the different Trunked
(Motorola, GE...etc) systems out there. The solution was to set
aside five (5) Frequencies for Mutual Aid. However depending on how
you read the rulings, Medical Evacuations don't count, but it can;t
hurt to try. The five channels are as follows

866.0125 Mhz 156.7 Hz Nationwide Calling

866.5125 Mhz 156.7 Hz
867.0125 Mhz 156.7 Hz
867.5125 Mhz 156.7 Hz
868.0125 Mhz 156.7 Hz

All must be in the Clear (ie no Scrambling, Speech Inversion or
DVP/DES) and use the 156.7 Hz CTCSS tone.

3018. 900MHz phone freqs & Uniden 9200

Newsgroup: rec.radio.scanner
Date: 1995-05-22 00:00:00 UTC
From: jlbowman@inetdirect.net
Message-ID: <jlbowman.3.02DAB61B@inetdirect.net>
Source record: 256152

What area of the 900MHz band do most of the new phones operate?
I am told that a lot of the 900MHz phones are still using analog signals and simple inversion for "scrambling".

Our Uniden EXP 9200 is digital spread spectrum and obviously not as simple to decode. BTW, it was rated number one by Consumer Electronics along with its 9100 counter-part. This is why we purchased the unit and because it documented a spread spectrum digital signal. Most of the others we looked at recently, last week, made no mention of the type of signal/mode. Frequency range specified in specs: 903.087-925.6131MHz. Tx power at base = 100mW, Tx power at handset = 100mW per a Uniden representative (Does this sound right?). Anectdotally, I can report the range is at least 3-5 times that of our Panasonic KX-T390H1, 49MHz -- and NO static buzz! Uniden has a service manual with alignment specs and power out adjustments....Panasonic could "think of no reason to provide one to consumers" when I called.

We have only had the Uniden phone for about 8 days....I think I will go ahead and try out some others. Any user experience out there?

Message-ID: <jlbowman.4.02E6F51F@inetdirect.net>
Source record: 256153

With regards to the 2006... If one utilizes the OptoScan 456 interface and ScanCat Gold, Probe, or ScanStar PRO (I THINK Scanstar does it, not 100% sure) you should be able to decode and then set the CTCSS tone to desired parameters. I have all three software packages and prefer each for different reasons. There are also individual CTCSS and DTMF decoders by OptoElectronics, etc. out there...One can build a fairly simple CTCSS squelch unit for your speaker, but these tend to be limited in operations...scanner stops anyway, not easily changed, etc....

Hope this helps! Check out Nuts and Volts, Popular Communications, other mags - these tend to advertised in the back...

Is it OK to use a non-Uniden automobile power cord
with the BC3000? Does the Uniden version, UA502,
do anything besides deliver power directly/unmodified
from the car battery to the scanner battery?

The UA502 is $11.25 straight / $12.19 coiled plus
$4.50 shipping but I've seen generic ones for $3.99.

Is there a Radio Shack or other generic car power cord
that I can safely use with the BC3000?

Thanks,
Richard

Hi all..

From an American friend I bought a PRO35 realistic scanner while back and it works great here in Holland. While back I saw the PRO35 in a shop for sale, but it didn't offer the 29-54mhz, instead it had something like 70 to 88,5.. this is the band for dutch police.. does anyone know how to upgrade or change the scanner? I know the 29-54 is handy for cordless, but I would like to make a switch so I can switch it to the other frequency set..

I tried 3 new Uniden 9200's before I gave up. The background noise was far
higher than a cheap 46/49 cordless. Uniden was very helpful in trying to
resolve the problem, but we never could cure it. Perhaps it was continuous
local interference. I ended up with an ATT 9120 which is much quieter.

I'm wrestling with the problem myself. I've got two RS
car power cords that work somewhat with my BC3000XLT.
One is the universal one and the other is the one that
RS sells that works with RS's Uniden-made radar detectors.
Both have the same type/size plug and upon physical
inspection, it appears to be exactly the same as the
plug on my Uniden BC3000 AC adapters. I experience strange
intermittency problems plugging them into the BC3000XLT's
battery pack, however (i.e. they plug in and work fine but
if I wiggle the connector in the socket, the BP LED will go
out intermittently). I have no problems whatsever with
intermittency using the two Uniden-made AC adapters for
the BC3000XLT that I own.

Moral of the story: They should work but they don't for
me. I'm gonna get one or two of the Uniden adapters.

>Hmmph.
>...de KE4CQE.

As one law-abiding ham to another, I would like to pose a rather
important question to you regarding that last sentence....

Pray tell, just HOW are the 49-MHz two-way radio users and
the young parents with cordless baby monitors supposed to keep themselves
from violating the law IFF said equipment just HAPPENS to occupy the
SAME frequencies as a neighbors cordless phone?

And YES, sometime this DOES happen. I am frequently annoyed
whilst using said two-way gear by cordless phone traffic on the same
frequencies. If one happens to have such a unit that only has ONE
channel in it, it leaves ya kinda screwed.

I submit that the congress and the phone lobby has once again
managed to create yet another unenforceable law, much as you point out
in your post....

Can anyone recommend a good shareware program that decodes DTMF tones via sound blaster? I have tried dtmf101.exe, but have not gotten very good results. Thanks.

HHHmmm let's see a good Ontario frequency directory...can we
say Haruteq...it's not perfect but still a good investment...
it goes for somewhere around $21 at radio shack...there is
also WWW sites that contain freq's for Southern Ontario
but I can't comment on that as I have only heard mention on
this...

: Gabe,

: Radio Shack *DOES* sell GMRS radios (151/451 MHz) radios, and they are
: GREAT for use because they have a server mile range on them. They are
: $130 each I think, not exactly sure, but ask them for a "GMRS" radio on
: the "Blue-Dot", "Red-Dot" or "Yellow Star" frequency; the "Green-Dot"
: is 151.6250 MHz and is a well known frequency, so you should steer away
: from Green-Dot radios.

Whoa there.... GMRS is a UHF service, 462 MHz, and is NOT for commercial
use anymore. This is NOT a GMRS application, although Radio Shack does
sell a GMRS radio. They do sell a business band radio on 151.625 MHZ, and
you can find Motorola P10s (and SP10s) fairly cheaply from a large number
of mail order stores on 154.57 and 154.6. All these must be licensed!
Check with a local commercial radio store, they may be able to help and
get something cheaply.

Regards,

I had no luck with the Interceptor I purchased, and I returned it. I live in a city and there are lots of RF transmitters. The thing would pick up something interesting for a few seconds, then go on to another transmission. It wouldn't record the frequencies, so I had no idea what I was listening to. I called the manufacturer & they told me a new product would be out within a year or so which would record the frequency for you to enter into your scanner at a later time. I would stay away from the Interceptor unless you live in a remote area.

V> here that >don't< use 10-97.

Ten codes are standardized by APCO up to 10-39. Any ten codes over 39 can be whatever the service wants them to be. In MOST services, all ten codes up to 10-39 will be the same.

Pro-46 Handheld Scanner For Sale.

Technical Specs:

100 Channels in Banks of 10, with Priority channel setting,
19 Channels/second seek, 14 Channels/second scan,
10 Monitor Channels, WX button, Lockout and Delay setable for each channel,
Keylock button to disable keypad, Belt Clip,
Power and Power/Charge Jacks, uses 4 AA batteries.
Freqency Ranges:

29-54Mhz
108-174Mhz
406-512Mhz
806-956Mhz (No Breaks)

Scanner is clean, has never been dropped, comes with charger & batteries,
Purchased September 1994.
Will sell for $150CDN/$110US OBO with charger & batteries.

>Does the BC9000 receive cellular images like the BC3000?

Yes -- in the top end of the military air band and above 1005 MHz.

> Also, how does the BC9000 compare to the rs pro-2006?

Both are top notch, but that would take an entire article to
explain (see the BC9000XLT review in March 1995 Monitoring Times
magazine). I found the PRO-2006 to be more bulletproof RF-wise,
but the BC9000XLT isn't far behind. The 9000 does interfere with itself
slightly unless connected to an outdoor antenna.

Feature-wise, it's no contest -- the BC9000XLT beats the PRO-2006
handsomely (except that the PRO-2006 has 10 search banks vs. a single
search bank for the 9000.) You can, of course, spend the money
to add a computer and an Opto board to the PRO-2006, in which case,
the simple PRO-2006 firmware features are replaced with a much
richer and expandable set.

Since the review BC9000XLT was a loaner, I ordered a personal unit to
add to the PRO-2004/5/6 collection :-)

> Does anyone know if Bob Parnass
>has done a review of the BC9000?
>Jim >jwayda@netcom.com

Yes. See above reference. Since writing that review, I have received
positive reports from new BC9000XLT owners. I hope more owners will
share their comments and comparisons by posting.

Source record: 256225

I have a question regarding Medvac Helocopters and Trunked radio systems. Medevac Services fly into many different jurisdictions, each jurisdiction has it's own radio system, this is no problem for the Medevac Service that has frequency agile radio sytem on board covering all VHF low and hi bands plus all UHF frequencies. These also have adjustable CTCSS and DPL encodes, allowing the service to communicate with any ground unit. How do they handle a situation when the ground units are trunked ?? Thanks in advance for any and all comments. -Dan-

Pca8c@virginia.edu asked of us:
>
> Anybody have a list (or source) for standard police "ten"
> codes? Thanks.

There's no such thing as "standard" police ten-codes. Contact the communications department of the police you want to monitor and ask the head radio geek for info. Here, in San Francisco, the cops are frothing about keeping that stuff secret while the communications department faxes out complete ten-code and all frequencies they use, including SWAT, vice, etc.

The worst thing they can say is "we don't give that stuff out". Since they've asked the FCC for those freqs, then go to Radio Shack and check out the freq books.

I live in Queens NY. Not really sure where either of you are listening around the globe. On my Pro-23(50 channel) I receive the telephones from the airplanes in the 454mhz and in the 470(?)s. I could be receiving an image frequency(IF doubled and added) but it's really clear. Can hear both sides of the conversation. I'm not positive but I believe the scanner only receives NFM,WFM.

Give these a try If you'd like:

454.7000
454.7750
454.8250

476.3000
476.3750
476.4250

Does anyone have or know where to get an ops or tech manual for a Kustom Signals K-55 X-band Moving Radar. We have one, but we don't have the tech manuals or operators manual. The thing looks like it's about 15 years old if that helps anyone.

3060. AR8000 RCSS software from EDCO

Newsgroup: rec.radio.scanner
Date: 1995-05-23 00:00:00 UTC
From: jlbowman@inetdirect.net
Message-ID: <jlbowman.10.06AC4E94@inetdirect.net>
Source record: 255986

Has anyone been a beta tester for the "to be released" Windows based AR8000 RCSS software? I am anxious for this to be released as it appears to have a click and drag memory bank programming, open data base format, and a lot of flexibility. My dealer has been told that the release has been pushed back yet another two weeks. Additionally, we have been quoted prices from $79 to $300! There is some type of bug that has pushed back the release date I am told.
The product info sheet I have shows a nice GUI; click control of a front panel AR8000; click mode/freq step/pass select; "spectrum" display of relative signal strength, activity, freq; and a WAV file recorder!

Looks promising!

Jeffrey

The Kansas City Police department will have 23 frequencies which they
will share with the other city departments. Its a digital encrypted
system for the police. Other city services will just be digital.
Supposed will go online in the next couple of weeks.

3062. EEPROM for AR2000 ?

Hello,

I'm still looking for a Hitachi HN58C65FP-25 EEPROM in SMD case or a complete
CPU board for a AOR AR2000 scanner.
A technical manual or a schematic diagram are also welcome!
If you can help, write me!

Does anyone know of any possible modifications to a RS PRO-31
handheld scanner. I'm not concerned with the 800MHz band (as
a a converter would solve that need), but possibly adding the
a 118-136 MHz comm. aircraft band. I can't find this particular
model in any of my hacker bibles, but wonder if someone may have
a found a trick or two for this model.

aThanks in advance for any helpful info.

From: cap2624@osfmail.isc.rit.edu
Message-ID: <1995May23.120651.20069@ultb.isc.rit.edu>
Source record: 256028

I just purchased and built the ramsey scanner converter kit. I am using it with my amature radio HT which receives 400-515. It DOES work. How well, I am not sure of yet. I seem to get some strong 400 Mhz bleading through when I use it. I think it is because I don't have a coaxial cable between then scn-1 and my radio, I am using stereo RCA patch wire (due to the RCA jacks on the scn-1). I am wondering what others did to tune the 2-turn inductors on the board, and what they found the ideal settings were. I notice that when I manuvure the circuit, even by the circuit board edge, reception changes. This is probably due to my body changing the impedence, as there are large power planes on the board. Has anyone had success placing it in a shielded box, and securing it with the ground screw holes? Does reception improve?

Funny, the at&t cordless model is also called 9100. Coicidence?

The at&t doesn't have an echo exactly but it does sound different when talking into it than with a conventional phone. The talker can't hear his own voice being looped back to the earpiece so it's a bit disconcerting at first. Still, having the digital encryption allows me to use a cordless. An analog cordless is worse than useless.

I am considering the purchase of a BC9000 and have read Bob Parnass' review in MT and followed the generally favorable comments here. I know that alpha tags can be placed on the first 250 channels, but I have a question. When in scan mode, when the unit stops on an active frequency, is both frequency and the alpha tag info displayed? Or is it one or the other, selectable? Thanks.

If the end user was able to program frequencies directly from the keypad
when the radio was in service it would not meet type acceptance requirements
for FCC part 90.203. This is why the feature is not commonly found or
desired on these types of radios - it would be illegal to use.

ftp oak.oakland.edu will get you to RM.zip and FM.zip. It's Radio Manager
for Windows and Frequency Manager for Windows. They are both shareware
and only $30 to license both, a steal of a deal. I've benn using them for
over a year now and love them. I use mine on a R-7000 and an R-72. It
will also work on the R-71 R-7000 and R-9000.
I can't remember the exact directory it's in but it's in the
aforementioned ftp site. I uploaded the latest version a few months back.

Hey, frown away Jess, but don't compare listening to 'innocent' people's
phone conversation to using a linear-listening is not broadcasting.
The airwaves are fair game, and I'm surprised as a licensed amateur
you find a difference between listening to one band and not another.

They need to crack down in areas where there are obvious areas of abuse
(linear amps, as you mentioned in your previous post, is a good example)
But I can't agree with you on cellular freq scanning either; how can the
gov't declare a frequency band 'off limits'? And having done so, how
would you have them enforce it? Restrict your rights, or the rights
of other in some other way? The airwaves should be free (which in reality they
are); if you don't want to be heard, scramble or use land-line.

Who is attacking price here? I don't have to defend what I paid for the unit to you. If you don't want it, and don't want to make a reasonable offer, well ...

I didn't give your condescending offer of $100 any thought but, since I DO own an R1, I feel obliged to respond in this thread:

The R1 is NOT good as a search-and-find scanner. Instead, where it really shines is as the smallest radio you can program all your favorite frequencies into and then carry in you shirt pocket. I would not recommend it as a primary scanner for anyone!

Why am I selling it? I have about 6 other scanners, including an AR 8000. I am one of those people whose work area is cluttered by electronic equipment. I also have 7 computers; want to buy an HP Palmtop? I have an old 95LX gathering dust. I use the 100LX and the 425.

The R1 is built well, has good audio, good battery life. The interface is a little non-conventional
and a little cumbersome, but, so is the interface on my R7100. It took a whole day to figure
out how to use the 8K, and I still have to go back to the book to review infrequently used functions. I could put the R1 in a little bag with one of those cheap Sony voice activated micro casette recorders. At the end of a day I would have a whole days worth of activity on select frequencies, compressed! I can't do this with the 8K because the squelch values change as it heats (yes HEATS!) up and the roaming birdies it has will lock the receiver on some junk signal.

Stable, small, functional, well built. Those are the hallmarks of the R1 receiver. If you need to
listen clandestinly, no receiver does it better.

That is the same answer they gave me. However, I have found after using the phone for a few days that it becomes less and less noticeable. What is important to us is the security....being a HAM and researcher/experimenter, I can appreciate the digital, full-duplex, spread-spectrum technology...this might lend itself to some bias.....The true test was my mother-in-law, she got over the echo within a day...but still does not appreciate how direct sunlight and water from the pool area can be deleterious!

Take care,

: Looking for the freq's of GTE Airfone's -- Post 'em if you got
: 'em, or let me know where you can find them.

Air-to-ground (probably the only side you'll be able to hear) is
AM (yes, AM) mode between 894 and 896 MHz. Channels are at 6 kHz
steps. The ground-to-air stations are the same way, except they're
between 849 and 851 MHz.

The 'frequently asked frequencies' list breaks them down into channel
groupings - if you can't find it (it's somewhere at oak.oakland.edu),
I've got a pointer to it at my web page, under the 'general frequencies'
link.

Hope this helps.

>Let me know what you can do for me and I'll gladly reimburse your costs.

>Thanks...Hugh hduff@humnet.westonia.com

Here is the contact information for the service dept at
Uniden/Bearcat:

Uniden Corporation
Parts and service
Mail: PO Box 501368
Service: 8707 North by Northeast Blvd
Indianapolis, IN 46250
(317) 842-2483 X592
(800) 297-1023

I have the manual sheet for the 200xlt, such as it is. It would make
amybe a two or three page FAX if you need it. Uniden will still that
unit for around $54 (I have one that I am sending next week).

From: ddunagan@ix.netcom.com
Message-ID: <3ptc4v$nc@ixnews3.ix.netcom.com>
Source record: 256047

Does anyone have any updated mods for the Pro-51. The last one I've found -- relating to keypad entries -- for test entries of different frequencies, does not work with my model. I suspect there's been a third modification to this scanner.

Any help is greatly appreciated.

>pretty boring!!!
>

Dan:

Okay, this is one of those personal preference things, but, how do you explain the presence of National Guard repeaters in the top 390 MHz operating in FM? How do you explain the FleetSatCom satellites in the 260 MHz (and other) frequency range? How about the Blue Angels or Thunderbirds singing dirty dittys while performing literally death-defying manuevers? How about Top Guns pilots slugging it out (in training)? I find ALL of this VERY interesting.

To dismiss 175 MHz of spectrum as only useful to talking to the likes of you (ATC) is incorrect. If you are bored I can understand that and I am sure you can seek out more interesting frequencies and share those with us here. Some people won't have as much UHF military activity as here in SoCal. I personally find MANY interesting comms in the 225-400 MHz range and I wouldn't be so lofty as to discourage newbies from listening to any frequency range.

I have learned a lot from this newsgroup, whether it was a new frequency lead or criticism of some message of mine. Try to ENCOURAGE newbies rather than scaring them off with tales of your personal boredom. Maybe you can use your intimate knowledge of ATC to help out those who are fascinated with aero comms?

If scanning cordless phones is illegal, then is listening to a
an autopatch conversation on the ham bands also illegal?
Maybe its illegal only on an a handheld, which is a portable. Listening on a
base station must be ok then.... ;) ;)

3094. PRO-31 Mod's

Newsgroup: rec.radio.scanner
Date: 1995-05-23 00:00:00 UTC
From: gwagnitz@pt8170.pto.ford.com
Message-ID: <3ptj09$m7c@eccdb1.pms.ford.com>
Source record: 256053

Does anyone know of any possible modifications to a RS PRO-31 handheld scanner. I'm not concerned with the 800MHz band (as
 a converter would solve that need), but possibly adding the
 118-136 MHz comm. aircraft band. I can't find this particular model in any of my hacker bibles, but wonder if someone may have
 found a trick or two for this model.

Thanks in advance for any helpful info.

> Thanks - Ron

Most electronics will fail fairly quickly. I can't remember what Uniden's standard warranty is, but coverage for 1 year should be more than sufficient to discover any faulty components. I remember hearing that major consumer electronics stores make more in profit on extended warranty plans than on the producta they sell!

I would pass on the extended warranty.

Since you would be listening to traffic between two amateur radio stations on
amateur frequencies - it is 100% legal.

I know a guy who paid $100 for a Pro-34 about a year ago. It is
cell-modified, but slow!

3101. Aerial in loft

Newsgroup: rec.radio.scanner
Date: 1995-05-23 00:00:00 UTC
From: dpfg@ukc.ac.uk
Message-ID: <7717@rook.ukc.ac.uk>
Source record: 256060

I am reluctant to put a massive aerial on my rooftop in case it attracts adverse attention.

I was wondering instead about putting an aerial in the loft of a two storey house, probably a discone to minimise ground plane hassles.

How much signal loss would occur from being inside the roofing fabric, assuming that the aerial was above any electrical cables and similar nasties?

Go to your local Sam's Club and pick up a Motorlola Radius P10 for $120. You aren't going to find a better deal than that. My local Motorola dealer tried to get $150 out of me for the same radio. Nothing fancy really, just one channel and one watt. If you need something more powerful, then check elsewhere.

Im curious... How come I can not here the person ordering on the freq
154.6 and all i hear is the Order taker ? McD's using 35.02 I can hear
both the order taker and the customer ordering but not on 154.600 ... can
someone offer enlightment?? Is ther a input freq for ordering?

3107. BC3000XLT trick for receiving AM above 550 MHz

Newsgroup: rec.radio.scanner
Date: 1995-05-23 00:00:00 UTC

Trick Your BC3000XLT to Receive
AM Above 550 MHz

by Bob Parnass, AJ9S

The BC3000XLT scanner firmware has a bug which prevents one from directly specifying AM mode for memory channels containing frequencies above 550 MHz.

The following trick will allow one to circumvent the bug and store a 760 - 1300 MHz frequency in memory with AM mode. To store frequency F (where F >= 760 MHz):

1. set the lower search limit to 25.0 and the upper limit to F MHz.
2. Open the squelch.
3. Press SRC
4. Select AM mode.
5. Press the LMT key twice (until frequency F is displayed).
6. Use the SND key to hold the frequency and mode then follow the normal procedure for transferring the frequency from the Send register to the desired memory channel or bank.

This applies to BC3000XLTs marketed in the USA with firmware release 0.09 and possibly later units. I filed a trouble report with Uniden to see if they can fix the bug in future units.

From: rzika@icon-stl.net
Message-ID: <3prhko$s32@server.icon-stl.net>
Source record: 256069

I have done this mode w/o a hitch!

Product...Realistic PRO-2032 by Radio Shack
Purpose...Modify for continuous 800 Mhz coverage
in appropriate 30 Khz steps where applicable

** Disclaimer...All modifications are done AT YOUR OWN RISK.
** Performing this modification may void your warranty.
** Perfroming this modification may enable certain portions of the 800 Mhz
band that is illegal to monitor under federal U.S. law.
** I strongly suggest taking ESD precautions by getting a static strap as
this involves work with static sensitive devices. Any electronics store
should have one for purchase.

This information is from the June, 1994 issue of Monitoring Times, p.
112.

Required equipment...small-tip soldering iron, small gauge rosin core
solder, desoldering wick, Phillips screwdriver, 1N914 or 1N4148 diode.
1. With the scanner unplugged from power, remove both upper and lower
covers (foru screws in the rear of the cabinet), taking care not to damage
the speaker wires.
2. Set the scanner upside down with the back facing you. Locate the
microprocessor shield (upper left corner near volume and squelch controls).
Unsolder and remove the shield.
3. Refer to the diagram and locate the three-legged diode at the lower
right of the microprocessor chip. Carefully unsosolder and remove this
diode.
4. Referring to the diagram, place a 1N914 or 1N4148 switching diode
across the solder pads as shown. (NOTE POLARITY) Remove any excess leads
and carefully solder it in place. Be sure it's leads will not contact any
other components, paths or the reassembled shield. A small piece of tape
may be used as insulation if necessary.
5. Plug the scanner into power, turn it on and test the unit by entering
any frequency that may have been blocked in the 800 Mhz range.
6. If successful, unplug the unit and reassemble the scanner.

Has anyone heard anything about the RS Pro-2038 mobile scanner....or the Pro 2026? And while I'm asking the "cellular like" scanner antenna also from Radio Shack.

I saw a prior post about the cell like antenna, but I never saw any follow-ups to that msg. Any comments would be appreciated.

It looks to me that just about all the RS scanners are now very similar to the bearcat/uniden line, anyone else have that same view.

3112. Scanning Trunked? Huh!

Newsgroup: rec.radio.scanner
Date: 1995-05-23 00:00:00 UTC
From: garya27446@aol.com
Message-ID: <3pro42$jlv@newsbf02.news.aol.com>
Source record: 256071

Trunked systems might broadcast each transmission on a different frequency. So capture a single "conversation," you'd need to track the frequencies. To do that, you'd need de-coding gear that Motorola and Ericsson just won't sell you.

Some trunked systems have up to 8 assigned frequencies, especially for a city or region-wide system. So you'd need a shelf-full of scanners, and even then you'd be hearing public works on two channels, police on one, fire on another and the sewer crew on yet another---all at the same time! It's be difficult to differentiate which conversation you were listening to.

Since the system is entirely-computer controlled, there's either a single data channel or data on all channels during idle times. That's where the beeps come in.

Say, is this technology cheap? Nope. San Francisco voted $50 million in bonds to pay for a new public safety 800 MHz trunked system. That's enough to keep 10 small-town police and fire departments going for a year! Ouch
Gary Allen

hi

I believe the freq ranges for the BC200XLT are
29Mhz - 54Mhz
118Mhz - 136Mhz (AM)
137Mhz - 174Mhz
406Mhz - 512Mhz
806Mhz - 954Mhz (Can be continuous if cellular block defeated)

From my web pages (which include all of California's municipal frequencies
and more):

Yosemite National Park, about 180 miles due west of San Francisco, is
imperfectly covered by amateur radio repeaters. Because of this, and the
rugged terrain, there are many dead spots and times you'll have to try
several of the following frequencies.

147.000 + Yosemite
172.650 Yosemite Park Local
171.650 Mt. Hoffman
168.350 National Park Service (NPS) Ranger
171.800 Yosemite Valley Floor
170.000 Yosemite Tactical

Additionally, the following special-purpose frequencies may be monitored:

155.160 Mountain Rescue Association (MRA)
155.205 Civil Air Patrol (CAP)
155.220 National Ski Patrol (NSP)
156.075 CALCORD
154.920 NLEMARS
147.120 + CLEMARS 1 (tone = 88.5)
154.935 CLEMARS 2

(I apologize for forgetting what the acronyms mean. My radio only has
six alphanumerics.)

To get random signatures put text files into a folder called ﷺRandom Signaturesﷺ into your Preferences folder.

And when these newgroups get even more noisy due to self-interested businesses posting hundreds or thousands of ads, will you still be reading netnews?

I think netnews is, in economic terms, a "public good". There is very little direct cost in posting an ad; moreover, once someone posts an ad, it is to one's advantage to join in before the resource is ruined - to "beat the curve". So it eventually becomes polluted with advertisements, diluting the information content below the point where it is worthwhile to bother trying to find the gems.

It's rather like clean air and water; there's little direct cost to polluting, and there is benefit in having such "cheap" waste disposal, so the market forces drive business to pollute. However, the total social cost is enormous.

Please don't pollute cyberspace. Keep ads in rec.radio.swap.

There is nothing wrong with ads that *DIRECTLY* relate to the current subjects in a newsgroup. When an ad is posted in a newsgroup where it doesn't belong, the poster will get flammed, which is not good for their business. People read newgroups usually because they want current information on particular topics. Ads for products in product intesive hobbies like ham radio, and scanning, should be welcomed. When the ads become annoying, the flames will fly again...

The radios referred to above are not all "GMRS" band allocations. GMRS refers only to ten specific frequencies in the 451-452 MHz range, some of which may be operated simplex, some with repeaters, and some both. There is an FCC license required and allowed for PERSONAL use only, unless grandfathered from years past. A 50 watt transmitting limit is imposed here. I think the license is about $40.

The radios referred to in the 151 MHz range are classified as BUSINESS only and are licensed as such by the FCC. Radio Shack sells models of both business band and personal GMRS band, but I would suggest looking into reputable manufacturers, such as Motorola, GE, or Johnson. You can find these in the yellow pages of a major metropolatin area phone book under Radio-Business-2Way.

Many electronic distributors are now also offering a 10 channel 2 watt GMRS handheld manufactured by Maxon. While the name may not be as reputable, it may serve the purpose for less money.

I owned the uniden for about 3 days. It has a really annoying echo that
is enough to drive you mad. When I called the customer service number,
they stated that they were aware of the echo and that it is a part of the
technology. Well, needless to say I returned their technology :-)

I am still waiting to here more about other models before deciding which
to try next.

Mike

3126. Comments on BC9000XLT

Newsgroup: rec.radio.scanner
Date: 1995-05-23 00:00:00 UTC
From: casato_jc@atc.alcoa.com
Message-ID: <casato_jc-230595074848@132.226.103.38>
Source record: 256125

Recently rec'd. and put into service a new Uniden BC9000XLT. Extremely pleased with the "absence" of intermod and interferences. Use of the ATT key has eliminated "near town/near freq." interference that I ALWAYS rec'd. with my PRO 2037. A friend recently bought an on sale PRO2035, and was so impressed with the BC9000, and so unimpressed with the 2035, that she has returned it to Radio Shack ...much to their chagrin ... they blamed her lack of tower antenna, sunspots and the like, but finally credited her charge card, since she was such a "good customer" !!

The BC9000 VFO is a breeze to use, the PRO 2035 was too small and shallow, even with the "O-ring" mod for easier use. (put and O-ring around the puny knob to spin the dial more easily, etc.)

Actually the features are too numerous to mention. Low/high dimmer on the display, along with an off feature. CTCSS option board. The search feature with a "hold" function. Direct freq. entry from "search" and VFO. Banks of 25 channels versus a hundred with the PRO2035.

If you're getting the message that I love the BC9000XLT, you're correct. For $390, I very impressed. 25 MHz to 1.3 Gig.

Next addition will probably be a Grove SW ScanVerter for shortwave use. Got to fill up those 500 channels ... and with direct freq. readout ...

If you're looking for something in the $400 range in a base unit, check out the Uniden BC9000XLT. I can't imagine that you'll be disappointed. It's truly a serious monitoring station to consider !!

Happy Monitoring

3127. PRO-2026 Speed Increase?

Newsgroup: rec.radio.scanner
Date: 1995-05-24 00:00:00 UTC
From: jason goldring <jason.goldring@sheridanc.on.ca>
Message-ID: <D93BKA.lwq@eclipse.sheridanc.on.ca>
Source record: 255927

Does anyone know how to increase the scanning speed of the
PRO-2026 mobile scanner? Although it is fairly quick, it still
takes a while to scan all channels.
Any info would be appreciated

On 24 May 95 07:21am, MARC WALLACE wrote to ALL:

MW> Well if listening to cordless phones or an autopatch conversation
MW> then listening to your favorite radio station would be illegal.

Listening to cordless phones is illegal. Listening to autopatch on a HAM band is legal. I fail to see a connection between either of these and any Broadcast radio.

MW> In fact if you hear something Illegal on a cordless phone coversation
MW> of your nieghbors you are supposed to report it... I think that's how
MW> it works anyway...

No, that's not how it works anymore. Such "evidence" would be illegal, since it would be gotten from an illegal source.

MW> Something I always say is "if you don't want me
MW> to hear it then don't send those signals through my yard to were I can
MW> pick them up".....

Makes sense to me. However, we are dealing with laws here, and Congress has seldom been fairly accused of exhibiting common sense.

From: jwayda@netcom.com
Message-ID: <jwaydaD93Fw4.8tr@netcom.com>
Source record: 255933

I have a PRO-43. Why is 108-118 Mhz omitted? I know that these frequencies are used by aircraft nav beacons. It seems that it is more trouble for the scanner manufacturers to omit them, then to just leave them accessible. The PRO-43 must be capable of receiving these freq's.

Jim

>antenna.
>Harold
>hpeach@pop.uky.edu

Yes you can use your scanner. I bought an antenna (later to find it's a
2m and 70cm antenna), it just wasn't build for transmitting.

If you do want to put a splitter in, you might want to try getting a splitter from a
satellite dealer that passes power to one port (connect the scanner to the end
that doesn't pass power). Although I'm not to sure how the scanner will react
when you go to use the phone. It may be impossible to listen.

To make things easier I'd just use an antenna switcher and use it to switch devices
instead. Chances are you're either listening to your scanner or you're talking on
the phone (which would mean you're not listening to the scanner).

Personally, I just stuck another 2m/70cm antenna on my truck for ham use. I
haven't used my scanner since I got my mobile (yet) but I also loath the idea
of maybe going behind my bench (I drive a truck) and disconnecting the coax any
way.

I view two extra antennas as being ok. When you have 3 that's a tad to much, 4
is still a bit tolerable, but 6 is definitely way to many.

Something interesting about this I want to share with you and everyone out there who may want to know. I have a lot of Motorola equipment and I was in their Anaheim repair facility about two years ago when I saw a secured area (chainlinked) of the warehouse entirely devoted to Disneyland. When I asked the tech about it he initially refused to discuss it. Upon asking more he informed me that they were working out a special deal with disneyland that would package their whole communications ops through the 5 man station panel that could be seen in the secured area. This included security, fire, paramedics, administrative, productions, cellular, paging etc. The system was copmuter operated, trunked and repeated all within the park and on their
generators so there were no failures if there was a blackout. In addition they could contact city, county and even state agencies through the radio and cellular on their frequencies. Their Motorola cell phones connected to their cell site in the park to access the phone system. The computer panel also interacted with non-manned radio transmitters for listening and activation of other systems realted to security or fire. The whole thing was unbelieveably trick and, although the tech admitted that he did not know exactly how it worked or what frequencies it would be on, he said it would be very hard to scan for any complete understanding of the transmission. He also said the system was months in the making and was easily the size the the deal they were currently in with Nextel over the complete Digital Data Systems coming out for autos in 1997.

These people are way out of control. This is like a small city owned and run by a agressive corporation...

3159. Handheld Particulars

Newsgroup: rec.radio.scanner
Date: 1995-05-24 00:00:00 UTC
From: linguipunk@aol.com
Message-ID: <3q0s12$pm3@newsbf02.news.aol.com>
Source record: 255959

Fellow Scannists,

I'm in the process of buying a handheld and am waiting for vendor response on some questions. Thought I'd post 'em here too to get more and unbiased opinions.

I kind of narrowed it down to AR8000 and ICOM R-1. Pretty much the AR8000 actually, from what I know about whats out there (not a lot.) The R-1 is neat 'cause its so small (the cool toy factor.) But I hear the AR has much better speed, selectivity etc. (a real scanner.)

One of the things I want is a serial interface. AR has it. It's not clear about the R-1. Here's the problem: I also want to use the serial to tune the scanner with my Opto. Scout. Does AR conform to the CI-V protocol used by the Opto? If not, are there H/W or EEPROM tweaks available to make it so? Or is there a third candidate that meets all of the requirements.

I'd appreceate e-mail responses so I can see 'em ASAP.

Thanks Much,
-Dean

I have had one for about 6 months and I give it a weak thumbs up.
I am happy with it and have no plans to sell it for another model
(well maybe the AR8000), but it does have its drawbacks. One is
that the squlech pops open for a split second when it switches
circuits (diff freq bands) which can be annoying. Secondly, the
scan speed is quite slow, and when you try to put it in the faster
scan mode (25 ch/sec...woohoo!!!) it seems to skip some channels
that have audio on them. But the sheer flexibility of the unit
outweighs these drawbacks, in my opinion.

IR>I have a question regarding Medvac Helocopters and Trunked radio systems.
IR>Medevac Services fly into many different jurisdictions, each jurisdiction
IR>has it's own radio system, this is no problem for the Medevac Service that
IR>has frequency agile radio sytem on board covering all VHF low and hi bands
IR>plus all UHF frequencies. These also have adjustable CTCSS and DPL encodes,
IR>allowing the service to communicate with any ground unit. How do they
IR>handle a situation when the ground units are trunked ?? Thanks in advance
IR>for any and all comments. -Dan-

out here in the san francisco bay area, lifeflight and calstar choppers
have just about every radio they can possibly squeeze into the cockpit
available to them. typically, many of the local departments that deal
with lifeflight and calstar that are on trunking systems have a second
radio in their vehicles just for such mutual aid communications hassles
as these. luckily, around here, few of the public service agencies are
trunked. most everything is conventional, and you'll find everything
from low band to 800/900MHz conventional to military band coverage in
the birds. i don't think they have any trunking rigs.

Would you like this graffitti problem in your neighborhood? The inner cities look like Hell, because no one cares. These commercial cd-rom folks will stop advertizing in our Amateur Radio Magazines and post here for Free. Do you want all the nuts and bolts magazine ads in our news groups? Hunderds of those little ads every week over and over. Then no more ham magazines...

Many good points, Bob. But i can skip over those, and i can often tell in advance of seeing by the large number of likely-to-be flaming replies attached to it. <GRIN> I can go to their WWW site if i choose to, and who knows; they might even do something cliever like include some useful things there which could encourage one to order the whole thing. What has me much more worred is junk e-mail, things that appear, unsolicited, in our e-mail (which many of us have to pay for) from these kinds of operations, simply because we posted here. Getting alot more of those really is going to be a problem.

Almost as bad as the SALE@ALLUS on amateur packet. Does anyone really read all that junk? Oh Sure! go eat a cookie.

<MUNCH> Yeah, and it won't be quite so bad if there was enough bandwidth to support it, and clever news readers. But if you get someone who hasn't connected to their packet BBS in a week or so, and merely goes to list the summary lines of everything they haven't read since then, that alone can practically saturate the pathetic 1200 bps channels that most people use in the S.F. Bay Area. It's both a bandwidth problem nationally, and in many cases locally, aggravated by junk-box human interfaces. <SIGH> [Sorry, folks, i guess i've just had a hard day]

THE KEY TO ORGANIZING YOUR HEALTH RECORDS

"If you care about yourself and your children, you will do everything you can to know your family's medical history. It can save your life, and the lives of those who are dear to you." -- Dr. Aubry Milunsky, Director, Boston University's Center for Human Genetics (Life Magazine, March, 1995).

Your Lifetime Health Planner offers the simplest, most effective way to take charge of your health. Enter important facts about your health history, keep a record of the names of medications and their effects, document each doctor visit and diagnosis. You will have the information you need, and in the event of an emergency, so will your family.

Your Lifetime Health Planner, 198 pages in a compact, loose-leaf binder, contains a variety of sections which include "Doctor Visits," "Medications," "Family Health History," and "Doctors and Specialists." The Planner is a must for the busy executive who needs to stay organized, for seniors who are receiving care and for newborns who need a record of their health care.

Parents Magazine recommended the Planner to its readers (April, 1994) and MCI called it "a useful resource in managing your personal health records." Margie Smotherman, Coordinator, Employee Health and Wellness, Blue Shield/Blue Cross of Iowa, said: "The employees felt that these (Planners) were great tools to not only record their pertinent numbers, but to plan for doctor's visits."

To get your copy, send a check or money order for $19.95 (plus shipping and handling) to :

: Who is attacking price here? I don't have to defend what I paid for the unit to you. If you
: don't want it, and don't want to make a reasonable offer, well ...
Well since you obviously included my post in a follow up . You must be
referring to me.

: I didn't give your condescending offer of $100 any thought but, since I DO own an R1,
: I feel obliged to respond in this thread:

WHO are you TALKING to ? I did NOT OFFER YOU a 100 dollars.
GROVE is selling them for 449 and with the accessorie , still come out
below asking price.

: functions. I could put the R1 in a little bag with one of those cheap Sony voice activated
: micro casette recorders. At the end of a day I would have a whole days worth of activity
: on select frequencies, compressed! I can't do this with the 8K because the squelch values
: change as it heats (yes HEATS!) up and the roaming birdies it has will lock the receiver on
: some junk signal.

Never noticed any HEAT as the ? changes. Go figure.

: Stable, small, functional, well built. Those are the hallmarks of the R1 receiver. If you need to
: listen clandestinly, no receiver does it better.
Debatable... R1 lacks a few major items such as better selectivity ,
better scan rate , and not enough memory channels. A well built scanner
that is lacking in certain areas . There was a thread here not too long
ago and some called it a toy. v

Message-ID: <3ptu1m$q9v@lucy.infi.net>
Source record: 255999

What is the date code on your Pro-51. Do you press 2 + 9 + L/O while turning it on, and then when the display test is runnind, press 2 + 9 + BAND? It will then load the frequencies in. on Ch 23, there is a cellular frequency that you can serch up & down from. If you go past the upper or lower limits, you will have to go back to Ch 23 and start over. Hope this helps. Other than that, I don't know of any other mods. Also, if the cell mod works, it WILL serch in 30 kHz steps!

Daryl

3174. Mods to Radio Shack 22-305 Frequency Counter

Newsgroup: rec.radio.scanner
Date: 1995-05-24 00:00:00 UTC
From: milliway <milliway@milliway.neosoft.com>
Message-ID: <3pu9cn$jc7@uuneo.neosoft.com>
Source record: 256001

Just purchased a Radio Shack RF Frequency Counter. Can think of a few good practical uses, but would like to pick up, say, a cordless phone in use in the house next to me, or a Macdonald's drive-through freq., but it seems the frequency counter must be within inches of the transmitter in order to find its frequency. I also find it picks up "strange" frequencies such as 424.9213, whereas I would only want it to pick up "even" frequencies such as 424.9125. Any ideas? Has anyone made any improvements to this device? Please respond in the newsgroup.

Well if listening to cordless phones or an autopatch conversation
then listening to your favorite radio station would be illegal.
In fact if you hear something Illegal on a cordless phone coversation
of your nieghbors you are supposed to report it... I think that's how
it works anyway... Something I always say is "if you don't want me
to hear it then don't send those signals through my yard to were I can
pick them up".....

>pretty constant, and if the error were really like noise it would seem like
>you could just average a lot of readings to get a more accurate fix.

In fact you *can* do just that. The SA dither is symmetrical, and if you time average long enough, you'll come to a position fix that's at least as good as the differential method. With a single reading in SA mode, your accuracy is only +/- 100 meters, and if you watch closely, succeding position plots will wander about inside that circle in a good approximation of random order. If you average enough points, you'll get a position fix down to under the +/- 10 meters promised by differential GPS. (For most receivers, this variation is most easily watched by looking at the altitude reading, which usually reads out directly in meters above MSL.)

From a military point of view, that's fine, because all they're concerned about is someone using a civilian GPS to guide a el cheapo cruise missile. By the time you time average enough readings in that case, the missile is somewhere else, so that technique doesn't pose a threat. Time averaging is useful, however, for geodesy since you can leave the receiver at the point you are surveying long enough to get a meaningful time average of the readings.

Note that the receivers themselves use time averaging. While they only update their display once a second, that update is the result of averaging many readings internally during that second. That short an averaging period, however, won't do better than +/- 100 meters. If you average over several minutes to hours, however, then you start to tighten your fix significantly.

Gary

plaws@comp.uark.edu (Peter Laws) writes:
> ab@ntmtv.com (Adrian Brandt) writes:
>
>> There are *some* differences, but they are pretty minor stuff.

Some people seem to doubt that the guts of these two radios have the same guts. Perhaps I'm wrong, but there is too much about the two radios (the Pro-26 and BC3000XLT) that is the same for me to believe that. No doubt--they are different products with differing packaging and features and all that, but I strongly suspect that they share the same CPU and underlying radio hardware.

>> they both have a user-selectable keyboard beep function (I didn't
>> verify if the 3000XLT did, but I know the Pro 26 does.)
>
> Yup. Power-on with the LHT button pushed to toggle the modes.

It's the exact same on the Pro-26. Power-on with light/key-lock button pushed to toggle the beep on/off mode.

>> The 3000XLT has this "gee-whiz" feature (which I'm sure *somebody*
>> might find useful) called count. I'm not sure of all the ins and
>> outs of how it works, but it is used to keep count of how often the
>> radio stopped on a certain channel or frequency.
>
> I have a BC3000XLT and this is the first I've heard of this function. Not
> surprising since the manual omits a whole BUNCH of features (like all the
> power-on toggles). Anyone care to describe how to access this function?
> I would welcome the function - I use it a lot on my BC300.

You're making me doubt the existence of this "count" feature. Isn't there a key labeled "CNT" or something suggestive of "count" on the 3000XLT? (I've only looked at the 3000XLT at a store for a while, so I don't remember, and I could be all wrong about the "count" feature I spoke of. I'm sure that's what the guy at the store told me the button did--but maybe he didn't know what he was talking about--how unusual for a salesman!)

Now that I've had the Pro 26 for a little longer, I'd say the thing I like least about it is the somewhat hissy quality to the audio. It's like a BC9000XLT with the "high-cut" on. The highs (treble) seem to be clipped a little. I bet some clever technically-inclined folks will figure out how to make the audio crisper/higher... replace a capacitor perhaps?

I am considering buying a Trident TR2400 from ACE Communications.
It seems to be the least expensive DC-to-Daylight all-mode
handheld scanner, which is what I'm looking for.

Do any of you have firsthand experience with the TR2400?
Have any of the magazines reviewed the TR2400?
Is ACE a good company?

I'd appreciate your advice. No flames, please.

: Does anyone know the true legal status of scanning the Cordless Phone
: freqs. ? I know that the scanning of cellular phone bands is supposedly
: illegal, but thought that cordless phones were fair game for everyone?

: Thanks to all in advance

: kcc@bix.com

Since the latest revision of the ECPA, the following types of
transmissions are now restricted:

o Telephone conversations (either cellular, cordless, or
other private means of telephone signal transmission)

o Pager transmissions

o Any scrambled or encrypted transmissions

According to the Electronic Communications Privacy Act (ECPA),
you are subject to fines and possible imprisonment for intentionally
listening to, using, or divulging the contents of such a transmission
unless you have the consent of a party to the conversation (unless
such activity is otherwise illegal).

You might have seen some news clippings recently where state courts have
ruled that cordless phone users have no expectation of privacy, and so
their phone conversations were 'fair game' for law enforcement. These
rulings were predicated on case law (i.e. previous court rulings).
However, the changes to the ECPA will likely affect any future cases of
this nature. Whereas before, the legal definition of permitted reception
was left to the courts, now there is statutory law defining this.
Statutory law usually takes over, unless the law is ruled
unconstitutional.

Now, with all this background...

Q: "What is the true legal status of scanning the Cordless
Phone freqs. ?"

A: Untested by the courts (but likely to be found illegal).

I live in Maryland and have been enjoying all the training flight comms
at Aberdeen Proving Grounds, most of which is in the 30-40Mhz range.
Recently I started listening in to F-16 fighter comms in the 138-140Mhz
and 286Mhz ranges. The training is taking place over New Jersey of all
places! Warren Grove gunnery range is where most of the bombing practice
happens. Shows you'll find plenty of mil comms most everywhere.

Around here they either have the trunked radio or they have no comms.
Strange since there are freqs for such operations and those radios were
REMOVED when the trunked stuff was installed. I hope other areas of the
country have planners with more brains than the ones around Dallas/FtWorth.

It's really quite simple - the CITA (Cellular Industries lobbying
nazis) pays off enough congresscritters, who enact legislation. Then
the cell phone sales geeks can legitimately tell their users that
it would be illegal for anyone to monitor them, and hence forth
their conversations are private. The big lie. They, of course, are
NOT likely to tell their customers that in spite of the stupid
Electronic Communications "Piracy" Act, there are STILL 88 gazillion
scanners out there that CAN and probably DO listen in!

>would you have them enforce it? Restrict your rights, or the rights
>of other in some other way? The airwaves should be free (which in reality they
>are); if you don't want to be heard, scramble or use land-line.

Damn straight, Scott! The burden of privacy should lie with
the USERS of the service, and NOT with everyone else. That means that
the cellular customer should be paying for encryption, IMHO.

Quite frankly, the entire ECPA thing was an utter boondoggle,
and showed both Congress and President Bush (who signed the scanner ban
into law, BTW) at their stupidest. We already had Section 605 of the
Communications Act of 1934 (as amended) that strictly prohibited the
divulgence of ANY communication, by wire or by radio, with the ONLY
exceptions being Amateur Radio, commercial broadcasts intended for
an open audience, and communications related to ships and/or planes
in distress. You could LISTEN to anything you wanted, but if you go
and read Sec. 605 it is plainly clear - divulgence is illegal. Period.

So why did we need MORE laws?

Now the new republican congress wants to pass a "reform act",
to do away with uneccessary laws. It is primarily aimed at gutting
environmental law and allowing business to pollute to its heart's
content if it will increase profits and productivity. Obviously,
a perfect opportunity to get rid of these recent, "excess" communications
laws. Think it'll happen? NO - because the republican controlled
congress will kowtow to the CITA's bucks.

I still say, bitch like holy hell to your congresscritters and
hammer them repeatedly with this bullshit.......

3208. Motorola SP10 Source

Newsgroup: rec.radio.scanner
Date: 1995-05-25 00:00:00 UTC
From: garya27446@aol.com
Message-ID: <3q2fqc$54f@newsbf02.news.aol.com>
Source record: 255881

For the entire Radius (i.e. Motorola) radio line, including SP10, P50, SP50, P110 and GP300, contact:

Page-Com, Inc.
11545 Pagemill Road
Dallas, TX 75243
(800) 527-1670
(214) 349-8950 fax

They have a special on GP300 and P110 radios until the end of June. You can get a 4-watt, 8-channel UFH GP300 for $602, or $585 for six or more. The VHF version is $567 for one, $549 for six or more. The P110 4-watt, 6-channel UHF is $472 for one, $455 for six or more. The VHF version is $437 for one, $420 for six or more.

This is just one company that sells the Radius line. There are many more that will wheel and deal, program the radios and send overnight. Many are listed in communications magazines.
Gary Allen

>||Radio Shack Publications | 817-878-6864 ||
>||--||

OK, Paul - and not meaning any disrespect but I GOTTA ask.

Given that your employer is one of the largest sellers of
both scanners AND cell/cordless phones in the country, where does
Radio Shack stand on this issue?

Tell me if I'm wrong - Radio Shack will pay homage to the
ECPA because there's more cold, hard cash in phones than there is in
scanners, EVEN though the ECPA is just plain, dead, WRONG.

(Taking note that one of the first casualties of the scanner
ban was the PRO-2006.....)

Again, Paul, keep in mind that this isn't a personal thing,
but I will tell you that I would not spend one penny at Radio Shack
if it were not for the fact that there is NO other electronics distributor
in my area that is open during the hours after I get off work.
I also do more mail ordering of some parts than I used to, rather than
putting up with poor stocking practices and annoying sales droids.

Radio Shack DOES have some good products. They HAD the PRO2006,
but then we KNOW what happened to THAT.

RS could do an awful lot to restoring not only *my* faith
but if you read many internet newsgroups, a LOT of folk's faith
if they would stand up and OPPOSE such bullshit legislation, and
even work on repealing it......and if you want to know a Senator who
went on record as being opposed, then contact Sen. Coats of Indiana.
Unless he has drastically changed his tune, he was opposed to the
scanner ban and wanted to see cellular users encrypting.

Is RS willing to do what's RIGHT instead of what is
IMMEDIATLY profitable?

Duane

3210. PRO-2006 heat?

Message-ID: <3q2gbt$8a4@mozo.cc.purdue.edu>
Source record: 255883

PRO-2006 owners, a question for you.....

Does yours have a tendancy to have a "warm" (I realize that is a pretty relative term) spot about halfway back on the left side of the radio when viewed from the front? Even when just sitting with NO signals, but powered on, this area seems to get rather warm. Thought I'd run it by some of the rest of you and see what your experience is on this.....

I am a big believer in keeping most solid state electronics as cool as possible (not frozen, mind you :-)) because I have seen too many examples of poor design resulting in "hot spots" just waiting to fail. This one bugs me, and makes me inclined to want to put a small fan inside to help vent some of that warmth, OR, in reverse, to pressurize cooler air INTO the cabinet.....

On the 200xlt, you can just open up the nicad pack and replace the cells. I
suspect the 2500 is the same way?

Actually the cell phone dealers now tell you that your phones are easy to
intercept. Then they try to sell you a $600 digital phone so your
conversations are safe. One of my friends parents got suckerd into a
digital phone. She only wants it in case her car breaks down. Duuh.
But hey! She'll get 10% lower rates if she has to call the tow truck.

3214. Discone antenna-WHy does this help my reception?

Newsgroup: rec.radio.scanner
Date: 1995-05-25 00:00:00 UTC
From: bobszabo@ix.netcom.com
Message-ID: <3q2ltr$jd3@ixnews4.ix.netcom.com>
Source record: 255887

I am using a discone antenna with a center element. It is on the balcony of my apartment and works pretty good. I have a question though.

When I hold one of the lower elements with my hand the reception improves. What does this mean? The antenna is not grounded.

L > telephone system.

Absolutely correct.
However, what a scanner HEARS is coming from two amateur radio stations,
therefore, it's legal to listen.

AB> The model is IC-R7100.
AB> If anyone has any clue how to operate it, has a manual lying
AB> around, or just happens to know Icom's phone #, I'd appriciate the help!

You lucky dog! Is it the one with 800MHz still in it?
I have one of those, and without the manual, you are dead in the water.
A few places you might try:
A local HRO if you have one.
Grove.
ICOM themselves. If you can tell me where you are, I can get you the closest authorized dealer's number. I have the official sheet.

To get you started:

Make sure everything's connected properly. You need power and an antenna at the least.
OK, here we go: POWER SWITCH OFF. TIMER OFF (out). AF GAIN fully CCW. SQUELCH, fully CCW.
Push POWER SWITCH on. Push [TS]; there are 8 tuning steps available. Pick the one you want: rotate the main dial to see choices. Push [TS] when desired tuning step is in the display. This is used for searching.
There are two ways to set a freq in a memory: direct and tuning dial. Direct is a lot faster for me:
FIRST: determine which memory location you want. For example, to put a freq in #1 (it starts at #0), press [1] and [Mch]. The radio will no be on ch. 1.
NEXT: press the numbers for the frequency you want, including the ".". Now press [ENT]. Then press [MW], and wait for three beeps. That freq is now entered into ch.1.
SQUELCH is strange: there are two modes. The first half of travel on the knob is normal to other scanners. The second half of travel will move the needle on the S-meter. Any signals BELOW the S-meter needle will not break squelch. Takes some getting used to.
MODE selection is easy - just press the button you want.
This should get you starte. The instruction is over 35 pages, so I can't give you all of it here.
Have fun!

Not true. If you are a licensed amateur radio operator, then the state laws
on scanners don't apply to amateur radio equipment only. That doesn't
include scanners.
However, the locals may give a break, but they don't have to.

This is a 'near field' receiver. As such, it must be very close to the
transmitting antenna to work. Lower power transmitters require a closer link
to the counter. That's just the nature of the beast.

This is probably due to the internal transformer. If I remember correctly, the transformer is live even when the power is off. THe way to avoid the problem is to use an external adaptor with the 12v jack on the back.

>Robert Harm@usit.net

Recommend you consider the Uniden/Bearcat BC9000XLT instead of
the PRO-2035 and PRO-2036. The 9000 is a better performer and
has many more useful features.

All three of these models were reviewed in Monitoring Times
this year:

PRO-2035 - 1/95
BC9000XLT- 3/95
PRO-2036 - 6/95

The PRO-2036 is hamstrung by poor image rejection, lots of
birdies, intermod, and easily outperformed by cheaper models.

The Pro-43 is a triple conversion model, so any images would be roughly 1200 Mhz away (I figured this out once, and I don't remember the math I did to get there). Consequently, you can't hear them. I can here them clear as day on my fully modified 43, though, but I would never intentionally monitor telephones.

In regards to your question about the 2006. I had mine for 3 years now and its stayed on almost 24 hours per day for the whole week for the majority of that time. I have allways noticed that the back area gets hot but thats because of the transformer. I wouldnt worry about it. As far as putting a fan in there its really not needed.

If you live in the USA, I recommend you shop with one of the
reputable sources listed in the FAQ:

[...]

The best buys on new scanners are from reputable mail order
radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

- National Tower Company, PO Box 15417, Shawnee Mission,
KS 66215. Telephone (913)888-8864.

- The Ham Station, 220 N. Fulton Ave., Evansville, IN
47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606. |

- Amateur Electronics Supply (Milwaukee, WI). Telephone |
(800)558-0411.

Beware of inflated "shipping and handling" charges and be
sure to include these when comparison shopping.

--

All A/C comms in 138-144, and 224-400
(except sats) are on AM. In the 138-144 range, you'll
sometimes find ground personnel in FM. In the VHF-Low range, Armp aircraft
and ground units are on FM.

I have read the FAQ and some messages regarding the legality of scanners in the US. But I have failed to thing any information regarding scanners in Canada (Since I live in Canada, this information might prove to be usefull :-)). So here's a couple questions :

Does the FCC govern the airways in Canada?

Is selling a scanner that can receive celular freqs legal in Canada?

If so, are there many vendors that do sell them, or do most sell the US models?

And anything else you would care to add...

3236. Icom Communications Receiver help

>It's be difficult to differentiate which conversation you were listening
>to.

If you are persistent and have a decent scanner, it's not impossible. I read some of this somewhere a few months ago (sorry, long forgot the source) and maybe improvised a bit myself.

Insert the freqs in reverse order ... (867.9375, 867.4125, 866.9375, 866.4125, etc.) and try to keep all the freqs in the same bank. One freq is the data channel. Lock it out. Some trunked systems supposedly change the data freq daily, so you might have to modify accordingly. Disable any delay and enable any turbo-type function. Then let 'er rip.

I found it sometimes helps to keep punching the scan key when one end of the conversation ends ... this is especially helpful with one PD I scan, which has some kind of lag (easily discernable by telltale beeps) between the time the mic is "de-keyed" and the time the freq is freed up.

It can be a drag to have to punch the scan key all the time, but the effort can be worth it. The other day I heard a cool narc bust: shots fired, a couple chases and a lost suitcase supposedly stuffed with cash. Treasure hunt, anyone??

Whatever you would like to call it...Feedback...Foldback...the jest of the whole thing is that when broadcast stations are doing LIVE remotes they usually have a way for the on-air talent to hear what is going on at the station. This is how the desk anchor on TV asks questions to the 'talent' in the field. Most stations (radio or TV) have a radio channel where they transmit the "on air" audio. This allows the talent to hear what the viewer hears and be able to keep up with the program or seem to communicate with the station.

Often the talent wears a monitor pager/radio on the "IFB" ("feedback") channel with an earphone.

From: saylboat@aol.com
Message-ID: <3q16h1$si7@newsbf02.news.aol.com>
Source record: 255917

Trunked radio frequencies are usually found in groups of five. Mobile TX and RX are 45 mHz apart. The systems are usually software driven by communications on a "data" channel which can be dedicated or dynamic in the system depending on which format (Motorola, GE, Johnson, Etc...) is utilized. Cleveland just spent $45 million for a seven site 20+ channel "digital" Motorola ASTRO 8000mHz trunked radio system which is currently operational and will soon be used by all of the City departments.

Hi Jim, I bought a 2400 from ACE about 5 mo. ago. I almost returned it because the BFO kept quiting. I had to repair it myself (cold solder joint). It is a very good radio, but I need the AOR8000 or similar scanner because I want the 50Hz tuning and filtering that the 2400 does not have in the SSB mode for HF reception. Although it works well in HF mode, the frequency is not accurate enough for my needs due to the use of a BFO type tuning in the HF mode. You can be +/- about 15 Khz from the desired channel on HF. If you are interested I would sell it at a fair price. I still have the original box and there are no scratches on it. Let me know, Thanks, Robert Blumenkranz NI6R 714-671-2009 radiobob@earthlink.net Home page :http://www.earthlink.net/users/engcon/webdocs/

Anyone have any experience with Scan*Star Pro on the PRO-2006 with an OS456?

Mine works fine, except I can't seem to get signal level squelch to
work. I set up the scanner to search over the local weather frequency,
set the min level for -127 dB, and the Max for 0 dB and it scanns, but It
never breaks the squelch. I can see the dB level of signals on the
screen when I scan without the signal level squelch, so I don't think
it's a harware problem

The autopatch is "patching the call" to an amateur station - generally a station that is under automatic control. What you are monitoring is traffic between two amateur stations. The control and content of the communication is the responibilty of the station control operators. Interconnection gives you no reasonable expectation of privacy. What is on the air would be amateur traffic. Monitor to your heart's content.

Date: 1995-05-25 00:00:00 UTC
From: matt@ua.nsw.ac.uk
Message-ID: <matt.42.0009844A@ua.nsw.ac.uk>
Source record: 255970

Can anyone suggest some current freqs for London Heathrow & Edinburgh?
I have a PRO-30 & the search function is 'eccentric', to say the least!
ie I won't have time to look for the freqs I need.

Thanks,
Matt

Source record: 255972

I think the DC Metro police have come up with their own form of encryption. I have been listening for a few days and I can't understand anything they say! Well, maybe about 10% can be understood. What a difference between their radio use and other cities in the area. I do have to hand it to them though. I wouldn't want their job. I was listening the other day and an officer was "trying" to get a medical unit to come to the aid of a victim who had his throat slashed and there was "no one available" according to the dispatcher. A few times in the evening I have also heard a bunch of people laughing and carring on in the room while the dispatcher was to dispatch calls.

Message-ID: <burtp.8.0007FEB8@execpc.com>
Source record: 255973

I had mod'ed an 890 XLT for a friend about 1 year ago.

The mod was supposed to open up the 900 mhz stuff.

That part worked real well but..... Just the other day he when to rearange some of the stuff that he had put in it. That is when he found out that the radio will not take 45.xxx Mhz. The stuff that he had in mem before the mod stayed and worked fine.

Has any one else had/seen this problem?

BTW is there an archive somewere with all this stuff (mods and stuff??).

Please email me at burtp@execpc.com

3262. Source for mobile scanner antennas

Newsgroup: rec.radio.scanner

Can anyone give me a good mail-order source for mobile scanner antennas. What I'm actually looking to do is get a scanner antenna that I can mount to the rack of my mountain bike. I realize that there may not be something like this available but I'm willing to modify an existing antenna to fit the bill.

Any help greatly appreciated.

Listening to the DC freqs is a real learning experience. Last week I
heard two officers fighting over one's refusal to take a call. It sounded
like two kids screaming in a school yard.

If you follow the continuing embarrassment that is the nation's capital,
nothing that one hears on the police freqs is any surprise. This is in
no way a slap at the hard working cops. Remember, they have recently
seen their pay cut by 10% and morale has got to be pretty low.

> because of the transformer. I wouldnt worry about it. As far as putting a
> fan in there its really not needed.

Bill Cheek (who sees more scanners on his bench in a week than most of us will see in our lifetimes) disagrees with you. In fact, he recommends running the 2006 from an outboard supply, to get the heat out of the case. (Also, removing the inboard transformer gives lots of room for mods!)

It is an absolute fact that electronics operated at high temperature won't, on average, last as long as the same electronics operated at low temperature. Run 100 Pro-2006's as you have done, and 100 of them from external supplies (and hence much lower in-case temperatures), and the latter batch *will* have a significantly lower failure rate overall.

This doesn't mean that *your* 2006 will *ever* have a problem. Even if it does eventually have a problem, this doesn't mean that it will necessarily have a problem earlier than any particular 2006 run from an external supply.

But please understand that your experience with a single 2006 says *absolutely nothing* about whether or not what you're doing is a good idea for everyone. It may only mean that you've been lucky (whatever *that* means :-).

Another reason to AVOID the use of "codes" ANYWHERE in Amateur Radio, or
GMRS. "Plain English" gets the point across quite adequately.

Purely a hypothetical scenario of course...

Let's say that some guy who happened to be checking out his new radio
happened to accidentally tune it somewhere between 880 - 900MHz. Let's
say that this guy then heard a conversation between two individuals.
Let's then say that this conversation netted the following:

1) Two phone numbers for the parties conversing.
2) The location of a shipment of drugs from Los Angeles.
3) The time of a transaction.
4) The amount of the transaction.
5) The location of same transaction.

What would you do?

(This really is hypothetical BTW, just in case you were wondering)

I have to disagree with the objections to the nicad pack. I have owned a 200xlt for about 8 years - I give it pretty heavy use and I am alternating 3 nicad packs. Previously threw one away. That's 4 in 8 years - not a lot of money - probably less than you would pay for your loose batteries. Also if you really want to put in your own nicads you can do it - there is a screw on the back of the pack - I am told others do it rather effectively, but I have n't bothered.

The squelch improvements described for the BC800XLT below
are probably applicable to your BC210XLT:

last changed December 21, 1994 |

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author.]

The squelch control in some FM monitor receivers is
difficult to use because of too much hysteresis. The
American Heritage Dictionary of the English Language
defines hysteresis as the:

o "Failure of a property changed by an external agent
to return to its original value when the cause of the
change is removed."

It's like having play in a car's steering wheel, or
backlash in a gear set. Too much hysteresis in a squelch
circuit forces one to keep the squelch at a tighter
setting, missing weaker signals when scanning or searching.
The squelch hysteresis problem was first addressed in a
1984 article about the Radio Shack PRO-24 crystal
controlled scanner.

Why do engineers design these circuits with any hysteresis?
Basically, hysteresis prevents weak signals from "popping"
the squelch open and closed rapidly, which would be very
annoying to the listener. A squelch circuit with hysteresis
requires a stronger signal to open the squelch than it does

to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

I'm planning to build a 5/8-wave groundplane vertical for the aero band (116-136mHz) and would like some help on the vertical element and the radials. Just using #12 or #10 copper wire would work, but I'm not sure that a larger diameter on these parts might not give me better broadband characteristics. Any suggestions would be helpful.

I'd call the police in a New York second. Technicalities be damned. I'd
let the chips fall where they may, if I got flak for having done so, it'd make
damned interesting reading in the paper and I'd make damn sure it was in the
paper, if I had to take out a full page ad myself. Knowledge of a crime of
violence or moral turpitude (malum in se, rather than malum prohibiutm), no
matter how injudiciously garnered, puts a moral burden on MY conscience (can't
speak for others') and I'd have ahard time living with myself if I didn't do
something.

Unfortunatelly due to thunder my roofing filters on 45 mc are
broken, and also my preamplifier/local oscilator is unstable.

I searched all over Europe to get new 45 Mc mf-filters (mono-
lytic cristal filters) but all I could get is 45.1 Mc.

So I'm looking for somebody with a good HF-print and a good
MF print, but with a broken Display/tuning/switchboard print.

Than I could make one out of two

Another reason to AVOID the use of "codes" ANYWHERE in Amateur Radio, or GMRS. "Plain English" gets the point across quite adequately.

Hiya Ken - I saw your recent list of freqs in the net just recently and have
a few corrections:

a. Anne ArunDEL is the correct spelling, not ArunDAL
b. BG & E left the lo-hiVHF band in this area (Metro Baltimore
, including Baltimore city, Baltimore county and Anne
Arundel) many years ago. They are now almost exclusivly on
800 mhz, both trunked and conventional, although there is
1 VHF hi band frequency they are thought to be using for
paging. I understand from listings in 'Nat Scan' that
B G & E is still using the old VHF Hi band system on the
Eastern Shore.
c. The BRATS ham repeater system was not listed <ahem>....
List as W3DID/r on 147.03, 224.96 and 447.725 .
N3GXH Randallstown is up on 53.15 .

Thanx for the list - I will look some more at it later....

Hi Rich - thanx for that most detailed list of frequencies; the one item I didn't see on that list is the Delaware State Police (particularly in and around the Delaware Memorial Bridge). If you have that set, I'd like those as well.

I haven't looked closely here, but I think your list of Md. State Police frequencies need some work. They reorganized their 39 mhz system quite a while ago, and I don't think they have ever been reported on those oddball 150 mhz frequencies you have (although I suspect you got them from the Radio Monitors Newsletter of Md. - I should know, I have been with them since day 1). I know that 151.475 and 155.19 and 155.73 are correct, but I will have to check those odd splits you listed the next time I am up that way. I THINK those aren't right.

Thanx again for any help and 73 Mike

Purely a hypothetical scenario of course...

Let's say that some guy who happened to be checking out his new radio
happened to accidentally tune it somewhere between 880 - 900MHz. Let's
say that this guy then heard a conversation between two individuals.
Let's then say that this conversation netted the following:

1) Two phone numbers for the parties conversing.
2) The location of a shipment of drugs from Los Angeles.
3) The time of a transaction.
4) The amount of the transaction.
5) The location of same transaction.

What would you do?

(This really is hypothetical BTW, just in case you were wondering)

This is a common thought, though in error.
The Federal rules only exempt AMATEUR equipment capable of scanning the law enforcement bands, not scanners.
It's up to the locals as to whether they will extend the exemption to scanners. (If they were of a mind to confiscate the amateur equipment in the first place, the chances of them extending the exemptiom would seem to be slim.)

I have to disagree with the objections to the nicad pack. I have owned a 200xlt for about 8 years - I give it pretty heavy use and I am alternating 3 nicad packs. Previously threw one away. That's 4 in 8 years - not a lot of money - probably less than you would pay for your loose batteries. Also if you really want to put in your own nicads you can do it - there is a screw on the back of the pack - I am told others do it rather effectively, but I have n't bothered.

The squelch improvements described for the BC800XLT below
are probably applicable to your BC210XLT:

last changed December 21, 1994 |

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author.]

The squelch control in some FM monitor receivers is
difficult to use because of too much hysteresis. The
American Heritage Dictionary of the English Language
defines hysteresis as the:

o "Failure of a property changed by an external agent
to return to its original value when the cause of the
change is removed."

It's like having play in a car's steering wheel, or
backlash in a gear set. Too much hysteresis in a squelch
circuit forces one to keep the squelch at a tighter
setting, missing weaker signals when scanning or searching.
The squelch hysteresis problem was first addressed in a
1984 article about the Radio Shack PRO-24 crystal
controlled scanner.

Why do engineers design these circuits with any hysteresis?
Basically, hysteresis prevents weak signals from "popping"
the squelch open and closed rapidly, which would be very
annoying to the listener. A squelch circuit with hysteresis
requires a stronger signal to open the squelch than it does
to keep it open.

Models cursed with too much hysteresis include the
Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003,

PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)

I'm planning to build a 5/8-wave groundplane vertical for the aero band (116-136mHz) and would like some help on the vertical element and the radials. Just using #12 or #10 copper wire would work, but I'm not sure that a larger diameter on these parts might not give me better broadband characteristics. Any suggestions would be helpful.

Message-ID: <008_9505271747@woodybbs.com>

Hiya Ken - I saw your recent list of freqs in the net just recently and have
a few corrections:

a. Anne ArunDEL is the correct spelling, not ArunDAL
b. BG & E left the lo-hiVHF band in this area (Metro Baltimore
, including Baltimore city, Baltimore county and Anne
Arundel) many years ago. They are now almost exclusivly on
800 mhz, both trunked and conventional, although there is
1 VHF hi band frequency they are thought to be using for
paging. I understand from listings in 'Nat Scan' that
B G & E is still using the old VHF Hi band system on the
Eastern Shore.
c. The BRATS ham repeater system was not listed <ahem>....
List as W3DID/r on 147.03, 224.96 and 447.725 .
N3GXH Randallstown is up on 53.15 .

Thanx for the list - I will look some more at it later....

Message-ID: <009_9505271747@woodybbs.com>

Hi Rich - thanx for that most detailed list of frequencies; the one item I didn't see on that list is the Delaware State Police (particularly in and around the Delaware Memorial Bridge). If you have that set, I'd like those as well.

I haven't looked closely here, but I think your list of Md. State Police frequencies need some work. They reorganized their 39 mhz system quite a while ago, and I don't think they have ever been reported on those oddball 150 mhz frequencies you have (although I suspect you got them from the Radio Monitors Newsletter of Md. - I should know, I have been with them since day 1). I know that 151.475 and 155.19 and 155.73 are correct, but I will have to check those odd splits you listed the next time I am up that way. I THINK those aren't right.

Thanx again for any help and 73 Mike

From: robjung@world.std.com
Message-ID: <D962Ix.7H0@world.std.com>
Source record: 255835

I am fairly new to scanning. I have tried out a PRO-62 and a BC3000XLT. Both had features I liked, but neither was "perfect". I like features that aid in searching for new frequencies like intelligent auto-store and search freq lockout.

It appears that the 7100 and AR8000 are the top of the line handhelds. The main difference appears to be the AR8000 computer interface. Are there any other pros and cons that I should be aware of.

Thanks for your consideration.

Regards,
Robert Jung

>but powered on, this area seems to get rather warm. Thought
>I'd run it by some of the rest of you and see what your experience
>is on this.....

That is where the power supply resides. The solution is very simple -
use an AC adapter plugged in to the jack used for mobile operation. You
will need an AC adapter with perhaps 700 ma 12 VDC rating. Check the
manual to see if it tells you the current rating at 12 VDC.

Be sure to unplug it from AC too. This should considerably decrease
the heat...

3308. VHF-Air and VHF-High

Newsgroup: rec.radio.scanner
Date: 1995-05-26 00:00:00 UTC
From: wonko69@aol.com
Message-ID: <3q3moi$gb6@newsbf02.news.aol.com>
Source record: 255837

A town nearby uses VHF-Air for their police broadcasts.

What frequencies would that be? Also, is that the same as VHF-High?

I am looking at a BearTracker BCT-7, does anybody know if it will cover that?

Is VHF-Air the 148 to 174 band or is it an 800 MHz band?

Any help would be greatly apprecitated.

Considering that the AR8000 and other scanners picked up images of blocked frequencies, what is the value (resale or otherwise) of an unblocked version of a scanner such as the AR8000?

3311. Re: POLICE ENCRYPTION?

Newsgroup: rec.radio.scanner
Date: 1995-05-26 00:00:00 UTC
From: dg715@cleveland.Freenet.Edu
Message-ID: <3q3q1q$5cj@usenet.INS.CWRU.Edu>
Source record: 255840

There are many legitimate reasons for police to use encryption in their radio communications. Much of the information they have is not for public consumption. I'm talking about personal information about individuals that must be transmitted during the normal course of a day.

For example, a car is stopped for running a stop sign. The driver has a criminal record, and it includes one or more instances of assaulting a police officer. It's vital the officer stopping the vehicle knows about the driver's past history, but it's not your right to know, just because you own a scanner.

Also, drug raid planning doesn't happen on the radio, but last minute changes do.

3312. Re: Autopatch listening illegal?

Newsgroup: rec.radio.scanner
Date: 1995-05-26 00:00:00 UTC
From: dg715@cleveland.Freenet.Edu
Message-ID: <3q3qhb$5i3@usenet.INS.CWRU.Edu>
Source record: 255841

Your comment that if listening to a cordless phone is illegal, then
listening to a radio station must be illegal shows you don't know
the difference between point-to-point personal communications and
broadcast communications. Telephone communications are not meant
to be public. They are a means for one person to communicate with
another person.

On the other hand, broadcast means exactly that...a communication
meant to be received by a BROAD group.

Point-to-point personal communications and broadcast communications
are both regulated by the FCC, but both are governed by different
rules and laws.

BILL FUNK (bill.funk@iotp.com) wrote:

: On 25 May 95 04:01am, JIM WAYDA wrote to ALL:

: JW> If you are a licensed ham radio operator (tecnician class or higher)
: JW> these state laws do not apply. This is significant incentive to get a
: JW> ham license.

: Not true. If you are a licensed amateur radio operator, then the state laws
: on scanners don't apply to amateur radio equipment only. That doesn't
: include scanners.

Actually in the 6 or 7 states with mobile scanner bans, the particular
state law(s) for each state include an explicit amateur exemption in
each case. Only one of the states (either Minnisota or Michigan as I
recall) limits the exemption to tech class or higher.
In these states, the amateur exemption is all inclusive and is not
specific to only amateur transceivers or amateur equipment.

The recent FCC preemption ruling does, as you mention, preclude all
such laws for amateur transcievers. It remains to be seen just
what might constitute an amateur transceiver if any case
involving a ham with a scanner and some other transmitting
equipment were ever to get that far. Because no state today
prohibits hams from having mobile scanners, the liklihood of
the question ever coming up, except for a very local (i.e. a
city or county ban) law is highly unlikly.

: However, the locals may give a break, but they don't have to.

See above.

From: zperron@leland.Stanford.EDU
Message-ID: <3q3vcb$12l@elaine35.Stanford.EDU>
Source record: 255844

Greetings...

I'm thinking about purchasing a BC760XLT for my vehicle. I have a
few questions and was hoping someone would be able to answer them for me:

1. Will it run off the standard Bearcat 12-volt car adaptor, or
would I have to wire it to my battery?
2. If I'm only scanning local frequencies in an urban area, can I
do without purchasing an external antenna?
3. Is this a good, solid scanner for the money and functions it
has?
4. What would be a fair price for a new one?

Thanks very much. I don't have the time to follow this newsgroup
regularly, so e-mail replies would be appreciated.

I'm looking for equipment which can pick up and jam "unwanted" microwave transmissions overriding my radio and tv stations
like an FM repeater .

If anybody has information on the topic, please send to E-mail address or post message.

I have one of these and after reading much about the cell mod (not needed since I have a UK model) I wondered if anyone had any other mods hacks etc or is it so integrated now that it is virtually impossible to do any more .

By the way it works really well with tuned loop antennas, try it .

Source record: 255855

Several people - well, a LOT :-) - emailed me on this subject, some who told me to forget it and some who said essentially that it was the transformer on the internal power supply, and to use an external 12 volt brick and unplug the 110VAC line.

So I gave that a try last night, and ya know, that radio was COOL as a cucumber. Hot spot = GONE. I used a Radio Shack 12 volt brick that I've had around for a while, can deliver 1 amp and has a little circuit breaker built into it. BTW, both the owners manual and the service manual spec the radio at 13.8 VDC, 10 watts. That works out to .725 amps, which is most likely a *maximum* current draw.

The brick got a LITTLE warm, but not much. All in all, I'd rather have the heat in the brick.....and NOT in the radio.

BTW, the radio has (if memory serves correctly) a 470 uF filter cap, rated 25 volts plus some sub-1 uF caps on that supply line. My guess is that this is probably sufficient to filter the output of most bricks if they give off a little crap. This one has always seemed fairly clean.

I will probably eventually run the radio off the main 12-volt supply that I use to drive my ham gear with - this is rather better filtered and regulated. I have 12 volt gel cells around that I use during power outages which seem to be able to run the scanner for QUITE a while......

I'd like to thank all the respondants for their comments and especially those who shared their experiences in greater detail.

Duane

>is the AOR 8000 the same???

No. The squelch thresholds are more uniform. Also the receiver is much more
sensitive than previous AOR handhelds, so setting the squelch a little
higher will not cause to you miss much.

> fan in there its really not needed.

Bill Cheek (who sees more scanners on his bench in a week than most of
us will see in our lifetimes) disagrees with you. In fact, he
recommends running the 2006 from an outboard supply, to get the heat
out of the case. (Also, removing the inboard transformer gives lots
of room for mods!)

It is an absolute fact that electronics operated at high temperature
won't, on average, last as long as the same electronics operated at
low temperature. Run 100 Pro-2006's as you have done, and 100 of them
from external supplies (and hence much lower in-case temperatures),
and the latter batch *will* have a significantly lower failure rate
overall.

This doesn't mean that *your* 2006 will *ever* have a problem. Even
if it does eventually have a problem, this doesn't mean that it will
necessarily have a problem earlier than any particular 2006 run from
an external supply.

But please understand that your experience with a single 2006 says
absolutely nothing about whether or not what you're doing is a good
idea for everyone. It may only mean that you've been lucky (whatever
that means :-).

Unfortunatelly due to thunder my roofing filters on 45 mc are
broken, and also my preamplifier/local oscilator is unstable.

I searched all over Europe to get new 45 Mc mf-filters (mono-
lytic cristal filters) but all I could get is 45.1 Mc.

So I'm looking for somebody with a good HF-print and a good
MF print, but with a broken Display/tuning/switchboard print.

Than I could make one out of two

What would I do? Nothing. Ignoring for the moment the (IMHO absurd)
ECPA, the Communications Act of 1934 prohibits divulging the contents of
anything other than a broadcast, amateur transmission or transmission
by a ship in distress except "in response to a subpeona issued by a
court of competent jurisdiction" or "on demand of other lawful
authority." (There are other exceptions which don't apply here.)
So you are breaking the law if you divulge the contents of the call
you intercepted.

What would I do if, for example, the conversation were about a murder
plot rather than drug smuggling? Probably something. But I wouldn't
break a law I think is important (the Communications Act) to try to
help enforce our well-intentioned but ineffective drug laws.

The R1 is extremely vulnerable to overloading by strong local signals.
If it will be your only scanner, better forget it if you live near
any powerful transmitters.

That said, I still love my R1. I can slip it into my pocket or briefcase
and listen to virtually anything, anywhere. But I replaced the supplied
antenna with a 6" piece of RG-58 with 1/4" of shield stripped from the end
which I use for monitoring local agencies. Otherwise, squelch breaks
on one 400MHz frequency when another local repeater fires up .175Mhz away.

Bob,

I mean search banks. The BC9000 has one. The Radio Shack 20035 has ten.
The AR8000 has TWENTY. I have more use for permanent search ranges; I
don't want to have to do a new search and store every time I want to see
what's on certain bands.

Cheers,
Alan

Easy. Call the police but don't leave your name/number!

As for listening to cell phones -- who cares? Why should anyone have
any expectation of privacy especially over radio waves? Hmm.. why don't
we just have the government make it illegal to breathe -- I imagine they
can make a bundle off of that!

Sorry, but radio waves belong to everyone. Government is about policy
not about ownership...

3389. Disaster Drill in N.J.

Newsgroup: rec.radio.scanner
Date: 1995-05-27 00:00:00 UTC
From: Gazerz@f122.n2604.z1.fidonet.org
Message-ID: <71a_9505301201@nisc.fidonet.org>
Source record: 255169

From: gazerz@aol.com (Gazerz)
Subject: Disaster Drill in N.J.
Date: 27 May 1995 19:48:46 -0400
Message-ID: <3q8dou$fj7@newsbf02.news.aol.com>

There will be a Disaster Drill in Central/South Jersey (Burlington
County)next weekend .If anyone would like, I'll post some of the freq's I
have for this drill.

Below is E-Mail I received from a friend who lives down there.

Guys:

I received an inquiry from Gazerz about the June 3rd disaster drill of the
simulated airliner crash with a military jet over Burlington County, NJ.
Gazerz asked if I would be there? Some Freqs and how and where to get
there.
So, I thought I would e-mail my answer to all of you in case you are
interested in monitoring it.

Burlington County is above Camden County from me. It is on the fringe of
my
monitoring coverage area. I will be monitoring the drill, but from home,
and
will assume it will begin around 8 AM although it might be later in the
day.
This is an excellent way to verify those frequencies that would come into
play in the real thing. With the leaves on the trees, most of the signals
won't make it here. Also, the drill site is on the Atlantic Ocean side of
Burlington County instead of being nearer to me on the Delaware River side
of
the county.

Burlington County covers some ground, it runs from the Delaware River to
just
before the Atlantic Ocean, so it spans the entire state west to east. It
includes Ft. Dix and McGuire AFB, the Lakehurst Naval Air Station and the
huge Wharton State Forest.

We know that two aircraft fuselages have been rented for the ocassion and
will be dropped somewhere and have to be "found."

Volunteer "casualties" will have to be found and will be made-up with
"phony"

injuries, etc. So, you'll have Search & Rescue teams and ambulances and probably National Transportation Safety Board?

To narrow things down just a bit, the news release stated:

"The passenger jet will crash near Lake Oswego and passengers will have been
assumed to have fallen in the lake." [This lake is a very tiny place near Jenkins, south of Penn State Forest off route 563.]

"The military jet, trying to return to McGuire AFB, will crash in Lebanon State Forest and trigger a raging forest fire." [Lebanon State Forest is due
north of the Lake Oswego crash site, just south of the Fort Dix Military Reservation.]

This entire simulation will take place in the County of Burlington, off the
N. J. Turnpike at exits 4 and/or 5. Or, come down U. S. Rte. 206 and you'll
be right in the heart of things. Be sure to have a good N. J. road map, however and your copy of Police Call for New Jersey.

This is going to be so big, that I just have to be home to monitor things and
make notes, etc. It's just a shame that it will be just outside of my monitoring area for much of the "on scene" stuff.

As far as frequencies go, it's just too big an event spread over too big a part of the state, to tie me down to frequencies. Potentially, hundreds of
frequencies may be used!! Honest! The newspaper item says, "We'll have the
fire, EMS, police and state police there. The prosecutor's office will play
and the medical examiner will play. Everyone is going to be playing, said Bill Rowley, Burlington County's emergency management coordinator."

"Four hospitals will be participating in the Burlington Co. exercise, including West Jersey." [I'll have to look at the maps to get a guess on which three other hospitals will be used.]

So, the above is what we know from the newspaper clipping.

Can we expect Civil Patrol SAR planes in the air? How about the area medevac
helicopters for SAR? And the State Police helicopters? Will the military take part? Those from Ft. Dix, McGuire, etc? If they plan a "raging forest
fire" will the forestry service play a part in the drill? Mock evacuations?
Which and how many fire departments will take part? News media choppers? What will the frequency be for the on-scene Communications Center? How

about
a triage point? State Police dive teams may be searching in Lake Oswego
for
"victims."

This drill is located in the deep woods, with few roads and small fire
companies and few ambulance services.

I'll do some further research and get back to you all with some
frequencies,
etc. that I "feel" might be used.

I'd like to invite you here for the drill except for two reasons, we'd
probably spend the time with B. S. instead of the drill and second, it is
just a bit to far from here to really bring in a lot of the action. But,
I'll sure try to hear things and let you know by e-mail during the day of
the
drill. I will program my new BC9000 with Burlington County frequencies
this
weekend and see if I get any better reception, I'll let you know.

If you are not interested in further details, please e-mail me that fact.

Robbie ;D
American Scanner Conference Greeter, Logger.

I too made my own 800 MHz antenna. Used pieces of a coat hanger cut to
the corresponding length. Used a bunch of junk laying around the house.
I've got it mounted externally at about 12' with RG-8. I am picking up
systems about 10 miles further than I used to.

There have already been several cases of this type, at least one here on Long Island. The fact is, the Constitution only protects against illegal search and seizure by the government. If you are not a law enforcement officer, the evidence would be perfectly admissable in Court. In fact, you could break into your neighbors house, find contraband, and give it to the Police. It would be admissable, as long as the plice did not ask you to do the break in. Of course, you could be charge with Burglary.
In the cas of cell phone calls, the DA would probably grant you immunity, as he would need your testimony to establish probable cause for the ensuing police action.
The answer is, if you hear planning or evidence of what you believe would be a major crime (murder, rape, major drug transaction), go ahead and call the authorities.

Message-ID: <3q862n$5p1@orion.cc.andrews.edu>

Does anyone have any opinions on the Bearcat 220 XLT? I heard it had
problems with imaging. Is that true? How bad?

Just by looking at the specs, it looks like a good radio, and I've seen
it for around $208.

Is it possible to restore cellular on it?

Thanks for any and all info,

Rich

Date: 27 May 1995 12:13:08 -0400
Message-ID: <3q7j2k$2jc@acme.freenet.columbus.oh.us>

I may be attending the 1995 Memorial Tournament at the Muirfield Village
golf course in Dublin, Ohio this year (again). I plan to take along my
Pro-34 (I know, it's a bit dated) since I observed several fans last year
listening intently to the "real time" score keepers and security on their
portables. Does anybody know what frequencies are used there? or maybe
the most likely range to search? There will also be live and taped TV
coverage, probably network TV (ABC,CBS or NBC) and ESPN.

Thanks,
and see you on the course!

Mike

Message-ID: <3q7j2u$1no@alpha.wright.edu>

I've been using an antenna called the MAX-CMP. It is peaked for
picking up the 800 Mhz band. I'd be interested in hearing from anyone
out there who also uses this antenna or the MAX-HH (handheld). I got
mine from CRB Research. I am not sure if any other company sells them.
The antenna works great and really pulls in those weak signals. I'd
like to compare notes with any other users out there. E-Mail me.

Let's see, you (hypothetically) engage in an illegal act (listening to
cell phone conversations) but you can still find a soapbox on which to
stand and spout off about morality? I don't get it.

I have used this antenna before. I was quite impressed. I had borrowed it from a friend and wanted to buy one, but didn't want to pay what they were asking. I built one for around $7.00 and it works just as good as the original.

I used copper rods and cut them to the appropriate length based on the frequencies I wanted to monitor. I had a mount from Radio Shack and attached the rods to the mount with small machine screws. I need to rebuild it using solder this time, but I feel it will require at least a 100 watt soldering iron to work properly. I only have a 15 watt.

That same company makes a 46-49 MAX which is optimized for the cordless phones. This antenna is truly _phenomenal_. I have verified reception up to a bit more than a mile away.

>cannot be in your possession at all, and I've heard that you just can't be monitoring police freq's on it!!?!?!!?
> what's the truth on this?

Truth is, it depends. Some states have laws that restrict mobile use of scanners. From what I understand, these laws are in place to prevent "ambulance chasing". Many states, such as here in Wisconsin, have no such law. Your best bet is to check with local officials, (or even the local Radio Shack) to find out if there are any restrictions in your area. Until then, I wouldn't operate mobile.

Just my two cents worth.

I returned my BC900XLT precisely because it doesn't have any storable
search banks, a feature I consider sort of essential in a high-end
scanner. I did like the alpha-numeric feature, though, which is
something I wish other vendors would duplicate.

The scenario of a person listening to a cordless telephone and hearing a crime discussed has already been fought. There have been at least two cases that reached some level of the appellate courts. The issues were more based on the police department's right to depend upon the information of the person who overheard the conversation, rather than the eavesdroppers responsibility to turn in the crooks. But, it does raise the issue: even if the listener calls the police, can they investigate, obtain a search warrant and make a case, can the D.A. prosecute, all based on this information?

Bottom line, if they can't prosecute, why make the call, morales or not?

Alan,

Could you elaborate? The BC9000XLT has one pair of registers
to hold frequency limits for Search and Auto Store operations.

If you mean Monitor memory, as in the Radio Shack models,
the BC9000XLT and BC3000XLT have the SND (send) key which
can be used to store a frequency found during a search,
permitting *any* memory bank to be used as a Monitor bank.

Yes, folks.

Fidonet just took its monthly shit on us.

Here is an account:

Newsgroups: news.admin.net-abuse.announce,news.admin.net-abuse.misc,alt.retromo
d,alt.nocem.misc
Date: Sat, 27 May 1995 16:31:33 GMT
From: red@redpoll.mrfs.oh.us (Richard E. Depew)
Subject: spewcancel:553:nisc.fidonet.org:rec.radio.scanner
Organization: ARMM Removal Services

A broken gateway at nisc.fidonet.org has spewed 553 recycled articles
into rec.radio.scanner with new headers. I've issued cancels for them,
based on the following selection criteria (which are more compact than
the NoCem list that follows):
HISTORY=@nisc.fidonet.org
NEWSGROUPS=rec.radio.scanner
DOUBLED=Message-ID:

The "<cancel.", "cyberspam!spamcancel!", and "X-Canceled-By: "
conventions were followed for approximately the first half of the cancels
until I noticed the pilot error. :-) The second half of the cancels
used the proper "cyberspam!spewcancel!". Sorry 'bout that!

This spew seems to have been a single bolus of classic Fido-Net poop.

Here are the message-ids of the canceled messages in a format that may
or may not be helpful to NoCem users. Oh, I don't have PGP set up on
this machine.

Hearing aid companies can usually make these. Call your local TV station
and find out where their talent has them made locally.

Disneyland Security is now on 938.4875, .4750, .4625, .4500, .5000, .4375, .425
0, .4125, .4000, .3875 MHz

You must monitor all channels, because the conversations will bounce from one
channel to another.

If you need the others let me know. They might still be good, I don't know if
they
switched everything to the 900MHz trunk.

There appears to be a broken gate at a BBS in New Jersey. I posted
information on this to news.admin.net-abuse.misc; let's see what the cleanup
brigade can do. Something similar happened to comp.dcom.modems last week,
that time from an educational institution in Canada.

>*that* means :-).

The perception of what constitutes a scanner running "too hot" is
subjective -- at least in these discussions. Beyond that, there
may be some variation from unit to unit.

The three PRO-2005/6s I've had for several years don't run hot enough
to raise (my) concern. To be sure, I haven't added any additional
circuitry inside them which would load down the internal power supply.

Nor have I ever been asked to repair or diagnose a broken PRO-2005/6
whose failure could be traced to overheating by the power transformer.

The first casualty to prolonged PRO-2005/6 operation is usually the
electroluminescent backlight panel -- a $13 part -- and has
nothing to do with the power transformer temperature.

I did vote for it and I'll probably have to do some work on it when they go to voiceless dispatch with MDT's. I'm a programmer/analyst with the department. I personnally see a need for the department to have a scanable frequency for mutual aid and public disaster broadcasting.

If you own a GPS receiver you can see the amount of sattelite
degredation by looking at the PDOP figure on the display. Lately I have
seen it change up and down. Nevertheless, I have seen the amount of
degredation change with the political tide. In fact with DGPS it a moot
point, but even with the degreadation, it will only degrade to about
100m of distance accuracy. I have found that the altirude readout
suffers more from the degredation than does the distance.

Howard Bornsteins "Guide to the AR1000" would have quite a bit of
relevant information regarding how to "drive" the 1500. Both the AR1500
and 1000 work the same way. The only major difference is the Auto Store
that you have isn't on the 1000 and the BFO wouldn't be mentioned either.

You might find a local radio dealer sells it - might be worth a look if
nothing else.

Hi people,
I have a Shinwa SR001 scanner which I would like to know a little
more about. It has, on the back panel, a blanking plate labelled RS-232 and
covers 25mHz to 1gHz in adjustable steps (5kHz minimum step). I would like
any information about modifications to alter the step size to 1kHz if possible
and also info about how to connect to a PC.
Thanks in advance.

Its in the back of the manual (or should be). It is used when you do a
hard keyboard reset of the CPU. Has no other use.

>The trident stuff looks an awful lot like the AOR radios under another name

That's because they are. The Trident radio are manufactured by Nissei
Electronics, who make many of the AOR handhelds.

When ACE Communications lost AOR distributorship in the US, they imported
them under a different name. Note that they do not have an equivalent for
the AR8000, which is not manufactured by Nissei.

At the risk of fanning flames...

There are appropriate areas to post commercial announcements. This is a
moderated forum, so the announcement passed whatever criteria the moderator
uses. I didn't find it objectionable since it is short.

> Does the FCC govern the airways in Canada?

Federal Communication Commission is the USA regulator, has no juristiction
in Canada.

> Is selling a scanner that can receive celular freqs legal in Canada?

YES!!! So is doing mods to get back blocked freqs. It is illegal to either
disclose what you have heard, or to use what you heard for personal gain.
ie: a tow truck using a police scanner to find accidents.

> If so, are there many vendors that do sell them, or do most sell the US
> models?

Yes and No. Radio Shack from what I see just follows what their USA HQ
tells them. There are some Pro-43's that can be modified in some of the
stores which have (or are) being replaced with the Pro-43a on a stock
turn-over basis. Other brands like Bearcat etc are available with FULL
COVERAGE.

There was an Airshow here with Military Aircraft. I notice the freq. dial on the radio of the F-16 read 95x, anyone know what freq. it was? There was a WarHog (Tank Killer) with a list of ten freq. which were in the UHF range. I didn't have anything to copy the freq. down, next time I'll have pen, paper and cammera

> Does the FCC govern the airways in Canada?

Federal Communication Commission is the USA regulator, has no juristiction
in Canada.

> Is selling a scanner that can receive celular freqs legal in Canada?

YES!!! So is doing mods to get back blocked freqs. It is illegal to either
disclose what you have heard, or to use what you heard for personal gain.
ie: a tow truck using a police scanner to find accidents.

> If so, are there many vendors that do sell them, or do most sell the US
> models?

Yes and No. Radio Shack from what I see just follows what their USA HQ
tells them. There are some Pro-43's that can be modified in some of the
stores which have (or are) being replaced with the Pro-43a on a stock
turn-over basis. Other brands like Bearcat etc are available with FULL
COVERAGE.

>*that* means :-).

The perception of what constitutes a scanner running "too hot" is
subjective -- at least in these discussions. Beyond that, there
may be some variation from unit to unit.

The three PRO-2005/6s I've had for several years don't run hot enough
to raise (my) concern. To be sure, I haven't added any additional
circuitry inside them which would load down the internal power supply.

Nor have I ever been asked to repair or diagnose a broken PRO-2005/6
whose failure could be traced to overheating by the power transformer.

The first casualty to prolonged PRO-2005/6 operation is usually the
electroluminescent backlight panel -- a $13 part -- and has
nothing to do with the power transformer temperature.

Source record: 255738

I may be attending the 1995 Memorial Tournament at the Muirfield Village golf course in Dublin, Ohio this year (again). I plan to take along my Pro-34 (I know, it's a bit dated) since I observed several fans last year listening intently to the "real time" score keepers and security on their portables. Does anybody know what frequencies are used there? or maybe the most likely range to search? There will also be live and taped TV coverage, probably network TV (ABC,CBS or NBC) and ESPN.

Thanks,
and see you on the course!

Mike

I've been using an antenna called the MAX-CMP. It is peaked for picking up the 800 Mhz band. I'd be interested in hearing from anyone out there who also uses this antenna or the MAX-HH (handheld). I got mine from CRB Research. I am not sure if any other company sells them. The antenna works great and really pulls in those weak signals. I'd like to compare notes with any other users out there. E-Mail me.

Richard Delaney (delaney@j51.com) wrote:
: How would I go about changing the tone that my Motorola Minitor responds
: to? And, of course, how much would it cost?

: Oh yeah, and what are the jack on the bottom for, and the white square
: (light, if it is, what kind of bulb, mine doesn't light when a page comes
: in) on top for?

The tone reeds are easy to swap out; they plug in to the board. New
and used ones can be bought from land mobile shops; I guess they'd run
near $30 or so. The order that they appear on the board is important!

The jack on the bottom is an external antenna jack. I think the white
square on the top is just a cover for a label.

Date: 27 May 1995 03:12:18 GMT
Message-ID: <3q65ai$mt6@southern.co.nz>

Does anyone know about the law and scanners in New Zealand. I thought
that you could listen to anything you wanted as long as you didn't
relay the information.

I was recently stopped at a breath testing checkpoint here in
Christchurch, the police officer saw a scanner and asked did I listen
to the police? (of course I do!) I said that I suppose I could, they
said if I did they could confiscate the equipment!

This sounds like bs to me, does anyone know for sure?

Cheers
Nathan

I've constructed a number of 1/4wave groundplanes on 2meters. I almost
always used #12 or #14 copper (non-stranded) wire, very successfully.
I don't think having a larger diameter makes much difference, unless
it's a MUCH larger diameter (say copper water pipe). I've seen this
used successfully, but the different in portability of the antenna has
always turned me off to this solution.

You might try making a 1/4wave and seeing how it works. For me, this
is the simplest antenna I can make which guarantees a good (even great)
match across a wide frequency range. It also has a base impedence of
about 50 ohms, which is certainly convenient. (I typically use an
SO-239 connector as the 'base' of the antenna, and solder wires to
the center spike for the driven element and the four mounting
holes for the ground plane).

Best regards,
-jcp- (N3CKF)

> Hi! Would you please tell me what "reaction tuning" is?
> (I have an ar8000)

The term "reaction tuning" refers to the capability to automatically tune a receiver (within 8 mS) to the current frequency received by the OEI Scout 40. This can be done with receivers such as Icom's R7000, R7100, R9000 (through the CI-V interface); Realistic's PRO-2005, PRO-2006 (with an appropriate interface); and AOR's AR8000 (with an appropriate interface cable). The idea is that with this combo you could just walk by an area and instantly pickup their signal without searching and keying in frequencies. The Scout will automatically find and record frequencies from 10MHz through 1400MHz (1.4GHz).

The appropriate interface cable we provide for using the Scout with the AR8000 depends upon the version of the Scout you will be using.

> something.

Let's see, you (hypothetically) engage in an illegal act (listening to
cell phone conversations) but you can still find a soapbox on which to
stand and spout off about morality? I don't get it.

I have used this antenna before. I was quite impressed. I had borrowed it from a friend and wanted to buy one, but didn't want to pay what they were asking. I built one for around $7.00 and it works just as good as the original.

I used copper rods and cut them to the appropriate length based on the frequencies I wanted to monitor. I had a mount from Radio Shack and attached the rods to the mount with small machine screws. I need to rebuild it using solder this time, but I feel it will require at least a 100 watt soldering iron to work properly. I only have a 15 watt.

That same company makes a 46-49 MAX which is optimized for the cordless phones. This antenna is truly _phenomenal_. I have verified reception up to a bit more than a mile away.

> what's the truth on this?

Truth is, it depends. Some states have laws that restrict mobile use of scanners. From what I understand, these laws are in place to prevent "ambulance chasing". Many states, such as here in Wisconsin, have no such law. Your best bet is to check with local officials, (or even the local Radio Shack) to find out if there are any restrictions in your area. Until then, I wouldn't operate mobile.

Just my two cents worth.

I returned my BC900XLT precisely because it doesn't have any storable search banks, a feature I consider sort of essential in a high-end scanner. I did like the alpha-numeric feature, though, which is something I wish other vendors would duplicate.

The scenario of a person listening to a cordless telephone and hearing a crime discussed has already been fought. There have been at least two cases that reached some level of the appellate courts. The issues were more based on the police department's right to depend upon the information of the person who overheard the conversation, rather than the eavesdroppers responsibility to turn in the crooks. But, it does raise the issue: even if the listener calls the police, can they investigate, obtain a search warrant and make a case, can the D.A. prosecute, all based on this information?
